ALB002	Land south of the railway line and north of Donington Pool, Albrighton	Albrighton	15.48	464	6.19	Large greenfield site to the north of Albrighton. The site is in active agricultural use. The site is bounded by the railway to the north east; agricultural land to the north west; residential to the east; semi-natural open space (Donington and Albrighton LNR) to the south (with further residential development beyond); and St Cuthberts Church and its grounds/Rectory Road to the East (with open countryside, much of which is in agricultural use beyond).	To the north and west the character is open countryside in agricultural use, although there are also several rural dwellings on large plots and a nursery to the west. To the south and east the character is primarily residential however there is a significant boundary between the site and residential development to the south resulting from the presence of the semi-natural open space (Donington and Albrighton LNR).	Not Suitable	As the site is located outside the development boundary and within the Green Belt, it is unsuitable for open market residential development. The site is also subject to heritage, environmental and/or physical constraints. For instance the southern and eastern boundaries of the site are located within flood zones 2 and/or 3, this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Access to the site would be established off a relatively narrow road, the suitability of such an access is subject to highway approval. The site is in proximity of a conservation area; scheduled monument; and one or more listed buildings, as such development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity of a LNR, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The implications of the additional vehicular movements on the adjacent Local Nature Reserve would need to be considered as part of this exercise, as vehicles would need to travel through this site to access the town and its services/facilities. There are a number of TPO's in proximity of the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	As the site is located outside the development boundary and within the Green Belt, it is unsuitable for employment development. The site is also subject to heritage, environmental and/or physical constraints. For instance the southern and eastern boundaries of the site are located within flood zones 2 and/or 3, this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. ALB003	Caravan storage, Station Road, Albrighton	Albrighton	0.22	6	0.09	The site is currently used for the storage of caravans. It is a linear site running along the southern boundary of the railway line, opposite the railway station.	Surrounding uses include housing, the railway line and station; open countryside to the south (allocated for and subject to a Planning Application for residential development; and builders merchants to the east.	Currently Suitable - Subject to Further Detailed Assessment	The site is suitable for residential development, subject to appropriate management of any physical, heritage and environmental constraints present. For instance provision of an appropriate access to the site and management of the sites relationship with the railway line (e.g. noise). Furthermore the site is located within proximity of several TPO's therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is suitable for employment development, to appropriate management of any physical, heritage and environmental constraints present. For instance provision of an appropriate access to the site and management of the sites relationship with the railway line (e.g. noise). Furthermore the site is located within proximity of several TPO's therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ALB005	Talbot Road, Albrighton	Albrighton	0.45	14	0.18	Recreational amenity land surrounded by residential properties, with a narrow points of access off Bowling Green Lane; Elm Road and Delaware Avenue.	The surrounding area is predominantly residential.	Not Suitable	Although the site is located within the Albrighton development boundary it consists of an identified amenity green space. As such it is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore access to the site is poor and the ability to provide an appropriate access would be subject to agreement by the Highways Team. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	Although the site is located within the Albrighton development boundary it consists of an identified amenity green space. As such it is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore access to the site is poor and the ability to provide an appropriate access would be subject to agreement by the Highways Team. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
ALB007	Land to the West of Albrighton	Albrighton	22.42	673	8.97	The site is divided into two by Bowling Green Lane. It is a large area consisting of a significant number of fields in arable/pastoral use. The site also contains a sewage treatment works in its northern portion.	The settlement of Albrighton is to the east of the site and there is a garden centre to its west. To the north are buildings associated with Cosford Airfield, beyond which is Cosford itself. To the south the character is predominantly agricultural.	Not Suitable	The site is not suitable for open market residential development as it is located outside the settlement development boundary and within the Green Belt. Furthermore, the site also contains two areas of identified open space, this area of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The ability to provide an appropriate pedestrian, cycle and vehicular access to and into the site is subject to highway approval. The site is also within proximity of a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is not suitable for employment development as it is located outside the settlement development boundary and within the Green Belt. Furthermore, the site also contains two areas of identified open space, this area of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The ability to provide an appropriate pedestrian, cycle and vehicular access to and into the site is subject to highway approval. The site is also within proximity of a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ALB008	Land to the South of Albrighton	Albrighton	11.70	351	4.68	A network of flat, small fields predominantly laid out to pasture, bounded by hedgerows and mature trees on either side of Newhouse Lane to the south of the settlement. Land also includes playing fields adjacent to Albrighton infant and junior schools.	The surrounding character is predominantly agricultural, with agricultural fields to the south, west and east. To the north is residential development and Albrighton infant and junior schools.	Not Suitable	The site is not suitable for open market residential development as it is located outside the settlement development boundary and within the Green Belt. Furthermore, the site contains an outdoor sports facility, this element of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. It is also unclear whether an appropriate vehicular, cycle and pedestrian access can be established to the site and linkage from this access into the wider highway network. Furthermore the site is within proximity of a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Additionally the site is within proximity of a number of TPO's therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The site is not suitable for residential development as it is located outside the settlement development boundary and within the Green Belt. Furthermore, the site contains an outdoor sports facility, this element of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. It is also unclear whether an appropriate vehicular, cycle and pedestrian access can be established to the site and linkage from this access into the wider highway network. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Additionally the site is within proximity of a number of TPO's therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.

Site Reference	Residential Availability Conclusion	Residential Availability Summary	Employment Availability Conclusion	Employment Availability Summary	Residential Achievability Conclusion	Residential Viability Conclusion	Residential Achievability/Viability Conclusion	Employment Achievability Conclusion	Employment Viability Conclusion	Employment Achievability/Viability Conclusion	Residential Overall Conclusion	Residential Overall Summary	Employment Overall Conclusion	Employment Overall Summary
ALB002	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Additionally, the ability to provide an appropriate access to and into the site is subject to highway approval; and the southern and eastern boundaries of the site are located within flood zones 2 and/or 3.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such employment development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Additionally, the ability to provide an appropriate access to and into the site is subject to highway approval; and the southern and eastern boundaries of the site are located within flood zones 2 and/or 3
ALB003	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for residential development. Suitability of the site for residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is suitable for development. Its availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site may have long term potential, subject to confirmation of the sites availability, achievability and viability; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
ALB005	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. ALB009	Shrewsbury Arms, High Street, Albrighton	Albrighton	0.26	8	0.10	The site contains the Shrewsbury Arms public house and a large car park.	The site is opposite St. Mary Magdalene Church (north); Saxon Park sheltered accommodation (south), other surrounding properties are primarily residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within the Albrighton development boundary as such it is an appropriate location for residential development, although there would need to be consideration as to whether the existing business is viable. The public house is a listed building, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of a number of listed buildings and a Scheduled Monument therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a local nature reserve therefore development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of one or more trees subject to a TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is not considered suitable for employment use as policy seeks to retain existing services and facilities unless there is clear evidence that the business is not viable now and in the long term - this does not appear to be the case with this public house. The public house is a listed building, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of a number of listed buildings and a Scheduled Monument therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. The site is also within proximity of one or more trees subject to a TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ALB010	Land to north of Kingswood Road, south east of Albrighton	Albrighton	3.31	99	1.32	Level greenfield site in agricultural use to the south east of Albrighton. The site lies to the north of the A41, Kingswood Road with High House Lane running along the eastern boundary. It lies within Green Belt land, is approximately 850 metres outside of the settlement development boundary and feels divorced from the village.	The surrounding character is agricultural.	Not Suitable	The site is not considered suitable for open market residential development as it lies outside the existing settlement development boundary in a location detached from the main part of the village and in designated Green Belt. Furthermore, the sites isolated and rural location means it would represent an isolated block of development. Additionally the ability to provide a suitable access to the site would be dependent on highway approval as the site is on a bend on Kingswood Road.	Not Suitable	The site is not considered suitable for employment development as it lies outside the existing settlement development boundary in a location detached from the main part of the village and in designated Green Belt. Furthermore, the sites isolated and rural location means it would represent an isolated block of development. Additionally the ability to provide a suitable access to the site would be dependent on highway approval as the site is on a bend on Kingswood Road.
ALB013	Wyvale Garden Centre, Albrighton	Albrighton	2.49	75	0.99	Linear site located between the Albrighton by-pass; railway line; rectory road; and Newport road. The site consists of a series of linked-units used as a garden centre; land used for the storage, display and sale of plants and other garden items; a large car-park; and a greenfield area.	To the north, south and east land is predominantly of agricultural character. To the west land is predominantly residential (housing associated with Cosford Aerodrome).	Not Suitable	The site is not suitable for open market residential development as it is located within the Green Belt and distant from the built form and development boundary of Albrighton, however parts of the site are adjacent to the built form of Cosford. The ability to provide an appropriate access and the amenity impact on potential occupiers of the site are also potential constraints.	Not Suitable	The site is not suitable for employment development as it is located within the Green Belt and distant from the built form and development boundary of Albrighton, however part of it is adjacent to the built form of Cosford. The ability to provide an appropriate access and the amenity impact on potential occupiers of the site are also potential constraints.
ALB014	Land at Cross Road, Albrighton	Albrighton	6.41	192	2.56	A gently undulating series of agricultural fields to the south of Albrighton.	To the north of the site is a predominantly residential part of Albrighton village. To the east of the site is Albrighton infant and primary school. To the west and south of the site are further agricultural fields. The site is located within the Green Belt.	Not Suitable	The site is not suitable for residential development as it is located outside the settlement development boundary and within the Green Belt. Furthermore, the site contains and is in proximity of a number of TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is not suitable for employment development as it is located outside the settlement development boundary and within the Green Belt. ALB009	Availability Unknown	This site was identified within a previous Strategic Land Availability Assessment (SHLAA). Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Strategic Land Availability Assessment (SHLAA). Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. The site is located within the Albrighton development boundary as such it is an appropriate location for residential development, although there would need to be consideration as to whether the existing business is viable. The site may therefore have long term potential subject to confirmation of its availability and consideration of the viability of the current business.	Long Term Potential - Subject to Further Detailed Assessment	The sites availability; achievability and viability are unknown. The site is located within the Albrighton development boundary as such it is an appropriate location for employment development, although there would need to be consideration as to whether the existing business is viable. The site may therefore have long term potential subject to confirmation of its availability, achievability and viability; and consideration of the viability of the current business.
ALB010	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development as it lies outside the existing settlement development boundary in a location detached from the main part of the village and designated Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. The sites isolated and rural location means it would represent an isolated block of development in a rural location. Additionally the ability to provide a suitable access to the site would be dependent on highway approval as the site is on a bend on Kingswood Road.	Rejected	Availability, achievability and viability of the site are unknown. Furthermore, the site is not considered suitable for development as it lies outside the existing settlement development boundary in a location detached from the main part of the village and designated Green Belt, as such employment development on the site would be contrary to local and national policy. ALB015	Land at Sandy Lane, Albrighton	Albrighton	12.12	363	4.85	A series of agricultural fields located to the north of Albrighton, between the settlement of Albrighton and the railway line.	Agricultural land to the east and west, there are also several rural dwellings on large plots and a nursery to the east. Railway line to the north and residential development to the south.	Not Suitable	The site is not suitable for residential development as it is located outside the settlement development boundary and within the Green Belt. Furthermore, the site is located adjacent to a Local Nature Reserve, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of a conservation area; a scheduled monument and a number of listed buildings therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Part of the site is located within flood zones 2/3 but the remainder of the site is considered developable. The ability to provide an appropriate access for vehicles, pedestrians and cyclists would be subject to highway approval - the implications of the additional vehicular movements on the adjacent Local Nature Reserve would need to be considered as part of this exercise, as vehicles would need to travel through this site to access the town and its services/facilities.	Not Suitable	The site is not suitable for employment development as it is located outside the settlement development boundary and within the Green Belt. Furthermore, the site is located adjacent to a Local Nature Reserve, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of a conservation area; a scheduled monument and a number of listed buildings therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. An element of the site is located within flood zones 2/3 but the remainder of the site is considered developable. The ability to provide an appropriate access for vehicles, pedestrians and cyclists would be subject to highway approval - the implications of the additional vehicular movements on the adjacent Local Nature Reserve would need to be considered as part of this exercise, as vehicles would need to travel through this site to access the town and its services/facilities.
ALB016	Playing Field adj. Sewage Works, Albrighton	Albrighton	1.45	44	0.58	Parcel of land containing a wooded belt, playing field and car park to the North West of Albrighton.	Agricultural to north and east, sewage treatment works to west, and residential to south.	Not Suitable	The site is not suitable for residential development as it is located outside the settlement development boundary and within the Green Belt. Furthermore, a significant (50%) element of the central portion of the site, including the sites access is located within flood zones 2/3, therefore the site could only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, the site contains an outdoor sports facility, this element of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site is located adjacent to a Local Nature Reserve, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The suitability of the current/new access to support the development of the site would be subject to highway approval.	Not Suitable	The site is not suitable for residential development as it is located outside the settlement development boundary and within the Green Belt. A significant (50%) element of the central portion of the site, including the sites access is located within flood zones 2/3, therefore the site could only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The suitability of the current/new access to support the development of the site would be subject to highway approval.
ALB017	Land north of Kingswood Road, Albrighton	Albrighton	5.49	165	2.20	Agricultural field to the east of Albrighton. The land has been safeguarded for future development. The site is contained between the railway line to the north and Kingswood Road to the south.	Railway line to the north, beyond which are agricultural fields. Kingswood Road to the south, beyond which are residential dwellings. A committed housing allocation/permission to the west. An agricultural field (also safeguarded for future development) to the east.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The sites are adjacent to but outside the Albrighton development boundary. However the site is located within land safeguarded for future development, therefore whilst the site is currently contrary to policy, it does have future potential for development. Suitability is subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the suitability of the pedestrian, cycle and vehicular access is subject to highway approval. The site is within proximity of a conservation area and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a number of TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The sites are adjacent to but outside the Albrighton development boundary. ALB018	Elms Farm Land, Albrighton	Albrighton	29.27	878	11.71	The site consists of a series of agricultural fields located within the Green Belt to the south west of Albrighton.	Character to the south and west is predominantly agricultural, although there is also a garden centre to the west of the northern element of the site. Character to the east is predominantly residential. Character to the north is a mix of residential, agricultural and open spaces used for outdoor sports.	Not Suitable	The sites are adjacent to but outside the Albrighton development boundary and extends some distance away from it. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore the ability to provide an appropriate access to and into the site is subject to highway approval. The scale of the site and the distance of some elements of it from the existing built form of the settlement will require due consideration. The site is also in proximity of a number of listed buildings (one of which is surrounded by the site), therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The sites are adjacent to but outside the Albrighton development boundary and extends some distance away from it. ALB015	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; viable and achievable (subject to any further necessary viability assessment). Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites.	Rejected	Availability, achievability and viability of the site are unknown. Furthermore, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such employment development on the site would be contrary to local and national policy. ALB019	Land adjacent to the Depot on Cross Road, south west of Albrighton	Albrighton	2.68	80	1.07	The site consists of a series of small agricultural fields located to the north of the Depot on Cross Road and south west of Albrighton.	Surrounding character is predominantly agricultural, although there is a depot located adjacent to the site and a series of large rural dwellings on large plots to the north east along Cross Road.	Not Suitable	The sites is separated from the Albrighton development boundary by a combination of agricultural fields and large rural dwellings in large plots. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore the site contains a tree subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The sites is separated from the Albrighton development boundary by a combination of agricultural fields and large rural dwellings in large plots. ALB021	Land North of Beamish Lane, Albrighton	Albrighton	1.04	31	0.42	A compact triangular site located to the east of Albrighton.	Residential and agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within land safeguarded for future development, therefore whilst the site is currently contrary to policy, it does have future potential for development. Suitability is subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is outside and separated from Albrighton's development boundary by further safeguarded land, which will require due consideration. The suitability of the pedestrian, cycle and vehicular access is subject to highway approval. The site is within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. ALB022	Lea Farm Barn, south of Albrighton	Albrighton	0.22	6	0.09	The site consists of an agricultural barn and its small curtilage.	Surrounding character is predominantly agricultural. Although there are isolated rural dwellings/farmhouses in proximity of the site.	Not Suitable	The sites is separated from the Albrighton development boundary by agricultural fields. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy.	Not Suitable	The sites is separated from the Albrighton development boundary by agricultural fields. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy.
ALB023	East of Harp Lane, Albrighton	Albrighton	0.77	23	0.31	The site consists of an agricultural field located to the rear of properties on High Street.	Character to the east and south is predominantly agricultural. Character to the north is a mix of residential and commercial. Character to the west is currently a mix of rural and residential, however the land has been allocated for residential development.	Not Suitable	The sites is adjacent to but outside the Albrighton development boundary and extends some distance away from it. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, the access to the site is likely down a very narrow track, the ability for this access to serve the development of the site is unclear and would be subject to highway approval. Alternatively the site could be accessed via the adjacent housing allocation, however until such time as the layout is confirmed the ability to provide such an access is unclear. The site is also in proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. P32a	Land between the Albrighton By-Pass and the Railway Line, north east of Albrighton	Albrighton	4.92	148	1.97	The site consists of a linear parcel of land bounded by the Albrighton By-Pass to the north and the railway line to the south. The site includes an area of green space; a travellers site consisting of a large area of hardstanding with associated buildings; and farm buildings.	Character to the north and east is predominantly agricultural. Character to the west is commercial. Character to the south is agricultural, however these agricultural fields are a mix of land allocated for residential development and safeguarded for future development.	Not Suitable	The sites are adjacent to but outside the Albrighton development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, the site is separated from much of the residential elements of the settlement of Albrighton by the Railway line. The ability to provide an appropriate access into the site is subject to highway approval. The site is also in proximity of several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The sites are adjacent to but outside the Albrighton development boundary. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore, the ability to provide an appropriate access into the site is subject to highway approval. The site is also in proximity of several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
P32b	Land to the west of Quarry Leasow Barn, Albrighton	Albrighton	1.22	37	0.49	The sites consists of a number of small agricultural fields located between the Albrighton By-Pass, the Railway Line, Quarry Leasow Barn and Rectory Road.	Surrounding character is predominantly agricultural.	Not Suitable	The sites is outside and separated from the Albrighton development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. The site is located in an isolated location, separated from the built form of Albrighton. The ability to provide an appropriate access to and into the site is subject to highway approval.	Not Suitable	The sites is outside and separated from the Albrighton development boundary. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. The site is located in an isolated location, separated from the built form of Albrighton. The ability to provide an appropriate access to and into the site is subject to highway approval.
P32c	Land between the Albrighton By-Pass and the Railway Line, north of Albrighton	Albrighton	4.07	122	1.63	The site consists of a series of agricultural fields defined by the Albrighton By-Pass and the railway line. The sites extent is also defined by the location of a series of rural dwellings/farmhouses and their curtilages.	Surrounding character is predominantly agricultural, although there are also a number of rural dwellings/farmhouses in proximity.	Not Suitable	The sites are adjacent to but outside the Albrighton development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. The ability to provide an appropriate access to and into the site is subject to highway approval. Whilst part of the site lies adjacent to the development boundary, it projects out into the countryside and is separated from much of the settlement of Albrighton by the Railway Line. The site is in proximity of a scheduled monument and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The sites are adjacent to but outside the Albrighton development boundary. P35	Land south of Albrighton Hall, Albrighton	Albrighton	38.60	1158	15.44	An extensive irregularly shaped site consisting a large number of agricultural fields located to the south of Albrighton Hall and the settlement of Albrighton itself.	Character to the south, west and east is predominantly agricultural. Character to the north is a mix of residential dwellings (of various density), land allocated for residential development or safeguarded for future development.	Not Suitable	The sites are adjacent to but outside the Albrighton development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, a small portion of the south western corner of the site is located in flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is also very large and its relationship to be existing settlement will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval. Part of the site is located in a conservation area, whilst the remainder of the site is in proximity of a conservation area and the site is also in proximity of a number of listed buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site also contains and is in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The sites are adjacent to but outside the Albrighton development boundary. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore, a small portion of the south western corner of the site is located in flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
P37a	Land north of Holyhead Road and east of Green Lane, south west of Albrighton	Albrighton	12.20	366	4.88	Relatively large parcel consisting of three agricultural fields located to the south west of Albrighton and separated from the settlement by another large agricultural field. The site is bordered by Green Lane to the west, Holyhead road to the south and Cross Lane to the south east. Other boundaries are agricultural field boundaries.	Surrounding character is predominantly agricultural, although there are a limited number of large rural dwellings on large plots in proximity of the site.	Not Suitable	The sites is outside and separated from the Albrighton development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, the site is in an isolated location. The sites relationship to the settlement of Albrighton will require due consideration. The ability to provide an appropriate access to and into the site and from the site to services and facilities in Albrighton is subject to highway approval and will require due consideration.	Not Suitable	The sites is outside and separated from the Albrighton development boundary. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore, the site is in an isolated location. The sites relationship to the settlement of Albrighton will require due consideration. The ability to provide an appropriate access to and into the site and from the site to services and facilities in Albrighton is subject to highway approval and will require due consideration.
P37b	Land north east of Kennel Lane, south west of Albrighton	Albrighton	12.72	382	5.09	Large, irregularly shaped site consisting of a series of agricultural fields to the south west of Albrighton.	Surrounding uses include agriculture, horticulture/garden centre, sewage treatment works, public open space, and a limited number of rural dwellings/farmhouses.	Not Suitable	The sites is outside and separated from the Albrighton development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, the site is in an isolated location. The sites relationship to the settlement of Albrighton will require due consideration. The ability to provide an appropriate access to and into the site and from the site to services and facilities in Albrighton is subject to highway approval and will require due consideration. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The sites is outside and separated from the Albrighton development boundary. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore, the site is in an isolated location. The sites relationship to the settlement of Albrighton will require due consideration. The ability to provide an appropriate access to and into the site and from the site to services and facilities in Albrighton is subject to highway approval and will require due consideration. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
P38	Land North of Loak Road, Albrighton	Albrighton	0.36	11	0.14	Rectangular site located north of Loak Road, east of Albrighton Allotments, west of a row of houses on Worthington Drive and south of the playing fields and sludge tanks off Worthington Drive. The site consists of a grassed field, an area of scrubland which previously contained a building, and an area of hardstanding. The site has an informal footpath across it, linking Loak Road and Worthington Drive.	Character to the south and east is predominantly residential. To the north and west is a mix of open space and the sewage treatment works and associated land.	Not Suitable	The sites is adjacent to but outside the Albrighton development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, the site has previously been in industrial use and is in close proximity of the Sewage Works, as such it would be necessary to assess and mitigate any contamination on the site prior to development. An informal public footpath crosses the site and the value of this connection will require consideration and if necessary an alternative route provided. The ability to provide an appropriate access to the site is subject to highway approval. The site is also in proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The sites is adjacent to but outside the Albrighton development boundary. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore, the site has previously been in industrial use and is in close proximity of the Sewage Works, as such it would be necessary to assess and mitigate any contamination on the site prior to development. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
P39	Land east of Rectory Road and south of the railway line, Albrighton	Albrighton	4.33	130	1.73	The site consists of an agricultural field located to the south of the railway line and east of Rectory Road. The site is separated from the built form of Albrighton by agricultural fields and the Donington Pool Local Nature Reserve.	Surrounding character is predominantly open countryside in agricultural use, although there is also several rural dwellings on large plots and a nursery to the south of the site farm buildings/farmhouse to the north of the site.	Not Suitable	The sites is outside and separated from the Albrighton development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, the site is separated from the built form of the settlement by an agricultural field and the Donington Pool Local Nature Reserve. The implications of the additional vehicular movements on the Local Nature Reserve would need to be considered as part of this exercise, as vehicles would need to travel through this site to access the town and its services/facilities. Access to the site would be established off a relatively narrow road, the suitability of such an access is subject to highway approval. The site is also in proximity of a conservation area, scheduled monument and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The sites is outside and separated from the Albrighton development boundary. Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
BEH001	Land adjacent to Benthall Villa Farm and Morris Corfield and Co Ltd, Benthall	Benthall near Broseley	1.19	36	0.48	Part of an agricultural field located between Benthall Villa Farm and Morris Corfield and Co Ltd. To the north west of Benthall.	Surrounding character is predominantly agricultural. However, there are residential dwellings to the east and south east of the site and the adjacent Morris Corfield and Co Ltd site (west) is a commercial enterprise.	Not Suitable	The site is located to the west of the village of Benthall. It is distant from the development boundary for Broseley. As such open market residential development is contrary to policy. Furthermore, due to the sites distance from Broseley it is more closely associated with Benthall which is considered countryside and is not an appropriate location for open market housing.	Not Suitable	The site is located to the west of the village of Benthall. It is distant from the development boundary for Broseley. As such employment development is limited to small scale rural enterprise and diversification schemes. Due to the sites distance from Broseley it is more closely associated with Benthall which is considered countryside and is not an appropriate location for wider forms of employment development.
BEH002	Land south west of Benthall	Benthall near Broseley	3.59	108	1.44	An agricultural field separated from the built form of Benthall (to the north) by another agricultural field.	Surrounding character is a mix of agricultural and forestry/woodland.	Not Suitable	The site is located to the south of the village of Benthall. It is distant from the development boundary for Broseley and separated from the built form of Benthall. As such open market residential development is contrary to policy and the site is not considered to have long term potential.	Not Suitable	The site is located to the south of the village of Benthall. It is distant from the development boundary for Broseley and separated from the built form of Benthall. As such employment development is limited to small scale rural enterprise and diversification schemes and the site is not considered to have long term potential for other forms of employment.
BEH003X	Benthall Grange	Benthall near Broseley	0.14	N/A	N/A						
BEH006	Land to east of Longbourne House, Benthall	Benthall near Broseley	0.92	28	0.37	Part of the site appears to be infrequently used in associated with the Morris Corfield and Co Lit works site on the opposite side of Benthall Lane. The remainder of the site consists of an area of scrubland and a grassed field.	Character to the south is forestry/woodland. Character to the immediate west is forestry/woodland beyond which it is agricultural. Character to the north is a mix of agricultural and commercial. Character to the east is a mix of agricultural and residential.	Not Suitable	The site is located to the west of the village of Benthall. It is distant from the development boundary for Broseley. As such open market residential development is contrary to policy. Furthermore, due to the sites distance from Broseley it is more closely associated with Benthall which is considered countryside and is not an appropriate location for open market housing.	Not Suitable	The site is located to the west of the village of Benthall. It is distant from the development boundary for Broseley. As such employment development is limited to small scale rural enterprise and diversification schemes. Due to the sites distance from Broseley it is more closely associated with Benthall which is considered countryside and is not an appropriate location for wider forms of employment development.
BEH007	South of Benthall Lane, Benthall	Benthall near Broseley	7.18	215	2.87	A large irregularly shaped site located within to the south of Benthall comprising of a series of agricultural fields.	Character to north and north west is predominantly residential. Character to the west is predominantly agricultural. Character to the south is predominantly woodland/forest. Character to the east is a mix of agricultural, wooded areas and dwellings with large curtilages.	Not Suitable	The site is located to the south of the village of Benthall. It is separated from the built form and settlement boundary of Broseley by a wooded area containing a small number of dwellings with large curtilages. As such open market residential development is contrary to policy. Ultimately the site is not considered to have long term potential for open market residential development as it is associated with the settlement of Benthall rather than Broseley, which is considered countryside, the site is also of a scale that is disproportionate to this settlement.	Not Suitable	The site is located to the south of the village of Benthall. It is separated from the built form and settlement boundary of Broseley by a wooded area containing a small number of dwellings with large curtilages. As such employment development is limited to small scale rural enterprise and diversification schemes. Ultimately the site is not considered to have long term potential for other forms of employment development as it is associated with the settlement of Benthall rather than Broseley, which is considered countryside, the site is also of a scale that is disproportionate to this settlement.
BEH008	Land off Lodge Lane, Benthall	Benthall near Broseley	1.29	39	0.52	The site consists of the northern part of an agricultural field, located to the south of dwellings fronting Benthall Lane.	Character to the south and east is predominantly agricultural. Character to the east is a mix of woodland/forestry and agricultural. Character to the immediate north is residential, beyond which is agricultural.	Not Suitable	The site is located to the south of the village of Benthall. It is distant from the development boundary for Broseley. As such open market residential development is contrary to policy. Furthermore, due to the sites distance from Broseley it is more closely associated with Benthall which is considered countryside and is not an appropriate location for open market housing.	Not Suitable	The site is located to the south of the village of Benthall. It is distant from the development boundary for Broseley. As such employment development is limited to small scale rural enterprise and diversification schemes. Due to the sites distance from Broseley it is more closely associated with Benthall which is considered countryside and is not an appropriate location for wider forms of employment development.

BES001X	Land adjacent to 2a Betton Strange Cottages, Betton Strange	Betton Strange near Shrewsbury	0.04	N/A	N/A						
BES002	Land north-east of Betton Strange	Betton Strange near Shrewsbury	2.51	75	1.00	The site consists of part of an agricultural field located in the countryside between Shrewsbury and Betton Strange. Site boundaries to north and south are defined by field boundaries, to the east it is defined by the road, to the west it is undefined, running through an agricultural field.	Primarily agricultural, although there are residential dwellings to the south of the site.	Rejected	The site lies within the open countryside. As such open market residential development is contrary to policy. Furthermore, due to the sites very rural location it is not considered to have any long term potential.	Rejected	The site is located in a rural location. As such employment development is limited to small scale rural enterprise and diversification schemes. However, due to the sites very rural location it is not considered to have any long term potential for other forms of employment development.
BES003	Land south west of Weeping Cross Depot, South of Shrewsbury	Betton Strange near Shrewsbury	6.30	189	2.52	The site consists of an agricultural field located to the south of the A5. The sites southern boundary is defined by a field boundary, its northern boundary is defined by the weeping cross depot/road, the sites northern boundary is defined by the A5/weeping cross depot, its western boundary is undefined running through an agricultural field.	Character to west and south is agricultural. Character to the east is a mix of agricultural and commercial. Character to the north is agricultural (land allocated for mixed use development).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site lies adjacent to but outside the built form of Shrewsbury, separated from it by the A5, within the open countryside. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes affecting this location and suitable management of the physical, heritage and environmental constraints present. For instance the site is separated from the built form of Shrewsbury by the A5, this is a significant physical barrier.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located in a rural location, however it is adjacent to existing employment at the Weeping Cross Depot. As such suitable employment development is currently limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential subject to appropriate policy changes affecting this location and suitable management of the physical, heritage and environmental constraints present. For instance the site is separated from the built form of Shrewsbury by the A5, although it is adjacent to the Weeping Cross depot.
BIS001	Land at Grange Road, Bishop's Castle	Bishops Castle	5.53	166	2.21	The site is in agricultural use - grazing/pasture. Site rises gradually NE to SW. Boundaries mixed: W with Field Lane and N with Drews Leasow, E obvious field boundary but S and rest of N weaker with some hedgerow and tree presence.	N - residential properties. E, S, and W agricultural fields	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to, but outside settlement boundary for policy purposes so is not currently suitable. The site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from Highways regarding suitability of access and management of congestion in the area. The site is adjacent to a Conservation Area and within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to, but outside settlement boundary for policy purposes, as such employment development is limited to small scale rural enterprise and diversification schemes. The site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from Highways regarding suitability of access and management of congestion in the area, this is a particular concern for employment uses on the site. The character of the nearby built form and nature of the access are likely to limit the types of employment that would be appropriate on the site to office based employment. The site is adjacent to a Conservation Area and within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS004	Land adj. Windmill Cottage, Bishop's Castle	Bishops Castle	1.51	45	0.60	Agricultural - grazing/arable. Bounded to W by Castle Green/B4385 to N, E and S by agricultural land. SW by Windmill Cottage. Boundaries clearly defined by hedgerows/trees and B4385	Agricultural fields	Not Suitable	Site is isolated from main settlement and certain facilities with potential access and traffic issues on B4358. Site is not suitable for development. Furthermore the site is located within 300m of a scheduled monument; conservation area; and several listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There are also two Veteran Trees within 30m of site boundary, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	Site is isolated from main settlement and certain facilities with potential access and traffic issues on B4358. Site is not suitable for development. Furthermore the site is located within 300m of a scheduled monument; conservation area; and several listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There are also two Veteran Trees within 30m of site boundary, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS005	Love Lane, Bishop's Castle	Bishops Castle	1.15	34	0.46	Agricultural field - unimproved grazing/arable. Site slopes down NW/SE towards main road. Single rectangular field, boundaries comprised hedgerows and scattered trees on all 4 sides. SE boundary with A488 (Love Lane), SW boundary with sawmill and timber yard, NW/NE boundaries with adjacent fields used for grazing. Site is separated from main town by agricultural land and sawmill.	All agricultural with exception of sawmill/timber yard to SW	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside but adjacent to the development boundary. As such open market residential development is contrary to policy. The site may have long term potential for open market residential development subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the adjacent built form is solely employment based (Timber Yard), with agricultural fields/Timber Yard separating the site from residential built form, residential amenity on the site will therefore require due consideration. The site is also within proximity of a conservation area and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. There are mature trees and hedgerows on site boundaries, which will require due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is in the open countryside outside the development boundary and there is an existing employment allocation in Bishop's Castle with capacity, as such employment development is limited to small scale rural enterprise and diversification schemes. The site does however have some long term potential for other forms of appropriate employment uses, subject to any necessary policy changes and management of physical, heritage and environmental constraints. Specifically the ability to provide an appropriate access to the site is subject to highway approval and there is an extant consent for overhead power lines on the site which could constrain its development. Furthermore, the site is within 300m of a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

BES001X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
BES002	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, achievable and viable. However due to its very rural location it is not considered to have long term potential for open market residential development.	Rejected	Availability, achievability and viability are unknown. However due to the sites very rural location, suitable employment development is limited to small scale rural enterprise and diversification schemes.
BES003	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viable	Site promoted for employment development. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered achievable and viable. Its availability is unknown. Due to the sites location, adjacent to but outside the built form of Shrewsbury, separated from it by the A5, open market residential development is contrary to policy. Furthermore, the site is subject to a physical, environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is separated from the built form of Shrewsbury by the A5, a significant physical barrier. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, achievable and viable. Due to the sites location, suitable employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential subject to appropriate policy changes affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.
BIS001	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purpose of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	Previously promoted for SHLAA. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; viable and achievable (subject to any further necessary viability assessment). Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include in particular access issues both on Kerry Lane and via Drews Leasows; the proximity of residential properties on the Drews Leasow site (exceptions affordable housing); and proximity to a conservation area and several listed buildings. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include in particular access issues both on Kerry Lane and via Drews Leasows; the proximity of residential properties on the Drews Leasow site (exceptions affordable housing); and proximity to a conservation area and several listed buildings. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BIS004	Availability Unknown	Previously promoted for residential development within the SHLAA. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Previously promoted for residential development within the SHLAA. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. BIS006	Land adj. Wintles, Bishop's Castle	Bishops Castle	3.87	116	1.55	Site to north of Wintles residential development. Currently in use for informal outdoor recreation and allotments (not recorded in PPG17 Study). Site rises generally from S to N but undulating within this. Bounded to S by Wintles residential properties, E by rear of properties on Castle Green, to W and N by agricultural fields (grazing/arable). Would form extension of existing settlement. Access off Wintles Rd, existing footpath network links possible via the Wintles. Strong boundaries with existing residential areas boundaries with surrounding fields to N and E mixed with some strong hedgerow and tree boundaries other less apparent.	Agriculture to W and N residential to S and E.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. Furthermore the site contains informal open space and allotments. These elements of the site would not be appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from Outdoor Recreation regarding the impact of the loss of informal open space and allotments and alternative provision may be required. The ability to provide an appropriate access to the site would be dependent on highways approval. The topography of the site would impact on site design and layout. Part of the site is within a Conservation Area and the rest is within proximity of this Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a Scheduled Monument and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site contains 3 Veteran Trees and there are a further 3 within 30m of the site boundary. Development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site contains informal open space and allotments. These elements of the site would not be appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from Outdoor Recreation regarding the impact of the loss of informal open space and allotments and alternative provision may be required. The ability to provide an appropriate access to the site would be dependent on highways approval, this is a particular constraint for some forms of employment uses. Due to the sites location, an appropriate buffer of the existing built form would likely be required and the type of employment uses that would be suitable are likely to be limited. The topography of the site would impact on site design and layout. Part of the site is within a Conservation Area and the rest is within proximity of this Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a Scheduled Monument and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS007	Adj. Drews Leasow, Grange Road, Bishop's Castle	Bishops Castle	1.21	36	0.48	Site adjoins E boundary of Drews Leasow affordable exceptions site and lies to N of BIS001. Site contains farm buildings (barns/storage) in N part and in use for agriculture - grazing. Site boundaries with Drews Leasow to E and residential properties to N (Grange Rd and Grange Garden's), E with Field Lane, S no discernible boundary with fields of BIS001. Potential access via Drews Leasow, Field Lane probably unsuitable. Links well to existing pedestrian linkages. Site rises gradually from N to S.	Residential properties to N and W. Field Lane to E. Agric fields - grazing land - to S as part of BIS001. Site adjoins BIS001 and extends into open countryside to S of town.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is primarily adjacent to but outside settlement boundary so is not currently suitable in policy terms. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access. The site is adjacent to a Conservation Area and there are several Listed Buildings within 300m. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is primarily adjacent to but outside settlement boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance any employment uses on the site would need to complement the surrounding character, they therefore may be limited to office based employment. Comments will be needed from highway department regarding access. The site is adjacent to a Conservation Area and there are several Listed Buildings within 300m. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS008	Schoolhouse Land East, Bishop's Castle	Bishops Castle	1.93	58	0.77	Agriculture - grazing/pasture. Site comprises the higher 2 of 3 fields adjacent to the development boundary between Schoolhouse Lane and Love Lane (the A488); the lower field is BISH005 (Love Lane). Additionally, previous now allocated site BISH009 (opposite the surgery) lies immediately west of this site and between it and the town. Land slopes down west to east with some uneven ground near the western boundary of the site. Boundaries not well defined with surrounding fields although established well defined line of hedgerow and trees separating the two fields that make up the site. Access via Schoolhouse Lane, pedestrian footpath connecting to town centre and amenities.	Agriculture to north, east and south (including BISH009). Schoolhouse Lane to the north. Boundaries comprise hedges with some mature trees.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to the site would be subject to approval by the Highways team. The site is within proximity of a scheduled monument, a conservation area and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. For instance the ability to provide an appropriate access to the site would be subject to approval by the Highways team. The site is within proximity of a scheduled monument, a conservation area and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS009	Opposite Surgery, Schoolhouse Lane, Bishop's Castle	Bishops Castle	4.07	122	1.63	Site lies to N of industrial estate to S and W of School house Lane. Moderately downward sloping to SE towards S and W. Boundaries clearly defined with surrounding employment and residential uses some of these boundaries also marked by hedgerows and trees. N boundary with adjoining fields less well defined. No highway frontage so access not clear, no obvious pedestrian connections.	Agriculture to N, Residential properties to E, employment uses to S and W	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access. Appropriate buffers of the adjacent industrial uses to South and East would be necessary. Any development will need to have regard to landscape sensitivity and visual prominence of the site. The site is within 300m of a Scheduled Monument, a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access. Appropriate buffers of the adjacent residential uses to the west would be necessary. Any development will need to have regard to landscape sensitivity and visual prominence of the site. The site is within 300m of a Scheduled Monument, a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS010	Site between Nover/Ridge and Grange Road	Bishops Castle	1.02	31	0.41	Agricultural field - grazing. Adjacent agricultural/commercial use in NW corner. Slightly upwards sloping to west and south. Joined on east, north and west by existing housing development. Boundary hedgerows and some significant trees. Boundaries are mixed with some outgrown, some gappy hedgerows, some with trees. Site has open boundary to remainder of field to south. Access to currently obvious no road frontage. Pedestrian access could join existing network via Grange Rd. Reasonably contained by existing built form on 3 sides.	E, N and W existing residential properties, S open grazing fields.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access and traffic management on Kerry Lane. Design of development will need to take account of adjacent properties. The site is within 300m of a Conservation Area and several Listed Buildings Development is therefore subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access and traffic management on Kerry Lane. Design of development and layout/buffering will need to take account of adjacent properties - employment uses on the site would need to complement the surrounding built form, they may therefore be limited to office based. The site is within 300m of a Conservation Area and several Listed Buildings Development is therefore subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

BIS012	Castle Street, Bishop's Castle	Bishops Castle	2.07	62	0.83	Site comprises the higher of two fields used for agriculture - grazing adjacent to the development boundary north of the town centre, between Castlegreen and Schoolhouse Lane. This site lies east of Castlegreen between the town and Windmill Cottage. The lower field is BIS013. Residential properties off Castlegreen (B4385) to the west, agriculture to the north and east and residential to the south. Sloping downwards west to east and also north to south but with an area of flatter land in the highest western and northern parts of the site. Site includes affordable housing completed at Clove Piece see BIS003x. Boundaries defined by hedgerows and trees to N, E and S and B4385 to W. Road frontage onto B4385 potential access from SE via Schoolhouse Lane is dependent upon BISH013. There are possibilities for pedestrian links to the town centre no exiting pavement on B4385..	Castlegreen to the west, agriculture to the north and east and residential to the south including new Clove Piece affordable housing.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access onto B4385. Design of development will need to take account of adjacent properties. Part of the site is within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a Scheduled Monument and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site contains 3 Veteran Trees and there are a further 3 within 30m of the site boundary. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access onto B4385. Design and layout, including buffering of development will need to take account of adjacent properties. Part of the site is within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a Scheduled Monument and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS013	Land off School House Lane, Bishop's Castle	Bishops Castle	2.48	74	0.99	Agricultural fields - grazing pasture. Bounded on all sides by agricultural use. To south is allocated site (BISH013 Schoolhouse Lane East.) Boundaries are defined by hedgerows and trees on S, W and N and by Schoolhouse Lane (B4384) on E. Site is divided roughly in half by line of overgrown hedgerow trees running NE - SW. Site is bisected SE-NW by extant pp for 33kv overhead power lines. Site slopes significantly downwards west to east.	Agricultural fields -	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. The site is also currently detached from existing development, being adjacent to an allocated but as yet undeveloped housing site. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is in a prominent location; the ability to provide an appropriate access to the site is subject to highway approval; and there is an existing consent for an overhead line which could impact on the sites development. The site is within 300m of a Scheduled Monument, a Conservation Area and several Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There are a number of veteran trees within proximity of the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is in a prominent location; the ability to provide an appropriate access to the site is subject to highway approval; and there is an existing consent for an overhead line which could impact on the sites development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS016	Field adj. Blunden Hall, Brampton Road, Bishop's Castle	Bishops Castle	0.51	15	0.20	Site lies on N corner of A488 and Brampton Rd and is currently private open space associated with Blunden Hall. Site is within the development boundary bounded by residential properties of Brick Meadow to the N and Bowling Green Close to the W. Boundaries are clearly defined by the A488, Brampton Rd and the neighbouring residential developments. Site is relatively flat and could be accessed via existing access to Blunden Hall, A488 or Brampton Rd. Pedestrian access is good with links to existing network possible.	Residential; also opposite secondary school/college on Brampton Rd and opposite Business Park on A488.	Currently Suitable - Subject to Further Detailed Assessment	The site is within a settlement boundary and so suitable for development in principle. Any proposed development design and layout should complement the adjacent employment allocation. The site lies within 300m of a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Effort should be made to retain mature trees and hedgerows on the site.	Currently Suitable - Subject to Further Detailed Assessment	The site is within a settlement boundary and so suitable for development in principle. The site is however only likely to be suitable for employment uses compatible with surrounding residential properties and adjacent employment allocation. The site is within 300m of a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Effort should be made to retain mature trees and hedgerows on the site.
BIS017	Land bet Station St and Bowling Green Close, Bishop's Castle	Bishops Castle	0.61	18	0.24	Site within development boundary currently comprises part informal car park for Boars Head pub and remainder is open space/vacant. Some established mature trees on site and surrounded by existing residential properties. Potential access via Station Street but no road frontage as such. Boundaries clearly defined by adjacent properties. Pedestrian links possible to existing network.	Residential properties within conservation area to N, S and W; Modern bungalow development of Bowling green Close to the E.	Currently Suitable - Subject to Further Detailed Assessment	Site is suitable for residential development in principle subject to satisfactory access. The site is located within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Consideration should be given to the mature trees and established hedgerows on the site, which in a conservation area are subject to protection.	Currently Suitable - Subject to Further Detailed Assessment	Suitable only for employment uses compatible with surrounding residential properties and when existing allocated site is developed. The site is located within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Consideration should be given to the mature trees and established hedgerows on the site, which in a conservation area are subject to protection.
BIS018	Land adjacent Brampton Rd, rear of Bowling Green Close, Bishop's Castle	Bishops Castle	0.55	16	0.22	Private garden land encompassing mature trees and shrubs, sheds etc. Flat site boundaries clearly defined by adjacent properties and Brampton rd. Site is the conservation area and has road frontage to Brampton Rd on S boundary. Pedestrian access via links to existing network.	Residential. Also opposite secondary school and college on other side of Brampton Rd.	Currently Suitable - Subject to Further Detailed Assessment	Site is suitable for residential development in principle subject to satisfactory access. The site is located within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. BIS019	Livestock market, Station Street, Bishop's Castle	Bishops Castle	0.41	12	0.16	Brownfield site. Current livestock market, site includes car parking, lairage, storage, offices etc. Site comprised hard standing car park and buildings. Site has frontage onto Station rd. and is surrounded by mix of uses including some retail, residential and pub. Boundaries set by neighbouring properties and Station Rd. Existing established pedestrian links	Central location in town surrounded by residential properties and other town centre uses.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is protected employment land so is not currently suitable for residential use. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located within proximity of a conservation area and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is protected employment land in SAMDev and is therefore suitable for employment use. The site is within 300m of a Conservation Area and several Listed Buildings. Development is therefore subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS020	Rear of surgery, Schoolhouse Lane, Bishop's Castle	Bishops Castle	0.43	13	0.17	Site is agricultural land - rough grazing and informal recreation. Site is within development boundary and lies between existing built up area and allocated site. Site boundaries are clearly defined by existing property to S and E; W by Schoolhouse Lane (B4384); N is not clearly defined remnant hedgerow and field boundaries only. Site slopes downwards from NW to SE and has narrow access onto Schoolhouse Lane (B4384), links to existing pedestrian network.	Agricultural fields to N and W; residential properties to E and S - including existing GP surgery.	Currently Suitable - Subject to Further Detailed Assessment	Site is suitable for residential development subject to satisfactory access. The site is within 300m of a Scheduled Monument, a Conservation Area and several Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	Suitable for employment uses compatible with surrounding residential properties and subject to acceptable access. The site is within 300m of a Scheduled Monument, a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Scheduled Monument, a Conservation Area and several Listed Buildings. Development is therefore subject to an assessment of impact on the significance of the settings of these heritage assets. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS021	Land to west of Oak Meadow, Bishops Castle	Bishops Castle	5.18	155	2.07	Greenfield site - currently agricultural land arable/grazing. Site lies to west of settlement, south of Welsh Street, west of Oak Meadow and north of Kerry Lane. It comprises two full fields and part of a further field, which form the lower part of a small valley with a stream. Site slopes upwards (SW to NE) from existing residential development. Road access onto Kerry Lane, new pedestrian links would have to be created. Boundary to the west is not consistently or always clearly defined as the southern part of the site forms part of a larger field.	Agriculture to W and S. Residential to N and E.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide appropriate access(es); integration into the wider road network; and management of traffic congestion within the wider road network is subject to consideration/approval by highways. Design of development will need to reflect the sites setting. The site is within 300m of a Scheduled Monument, a Conservation Area and several Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Presence of mature trees and established hedgerows on site boundaries.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide appropriate access(es); integration into the wider road network; and management of traffic congestion within the wider road network is subject to consideration/approval by highways. Design of development will need to reflect the sites setting. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Presence of mature trees and established hedgerows on site boundaries.
BIS023	Woodbine Terrace, Bishop's Castle	Bishops Castle	0.22	7	0.09	Greenfield site to the south of the town centre, off Church Lane in the gap south of Hollenbough. Outside but adjacent to development boundary. Wooded, remnant orchard now overgrown. Small site flat, very slight slope upwards from north to south. Residential gardens to north and south, Church Lane and properties to east, similar wooded overgrown field to west.	Residential gardens to north and south, Church Lane and properties to east, similar wooded overgrown field to west.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is outside settlement boundary so is not currently suitable in policy terms. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access onto Church Lane. Design of development will need to take account of adjacent properties. The site is located within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. One or more TPO's are in proximity of the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Consideration of the mature trees on the site.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is outside settlement boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access onto Church Lane. Design of development will need to take account of adjacent properties. The site location and setting may restrict the types of employment suitable on the site (office based employment). The site is located within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. One or more TPO's are in proximity of the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Consideration of the mature trees on the site.
BIS024	Land adj. White Lodge Drs Surgery, Bishop's Castle	Bishops Castle	3.27	98	1.31	Large greenfield agricultural fields some distance from town and development boundary in open countryside. Site consists of 2 fields grazing/arable with frontage onto A488 at White Lodge. Boundaries consist of field hedgerows and trees not strongly defined on W. No established pedestrian links significantly removed from town and facilities. Site has significant upward slope to NW.	Surrounded by agricultural land	Not Suitable	The site is detached from the built form of the settlement and within an isolated location. Open market residential development is therefore contrary to policy.	Not Suitable	The site is detached from the built form of the settlement and within an isolated location. As such employment development is limited to small scale rural enterprise and diversification schemes. The site is not considered suitable for other forms of employment development as it would represent an isolated block of development in otherwise open countryside.

BIS019	Not Available	Shropshire Council Officers understand that the site is either not available or not available for this form of development. Therefore information gathered for the purposes of this study suggests that the site is not available for this form of development.	Not Available	Shropshire Council Officers understand that the site is either not available or not available for this form of development. Therefore information gathered for the purposes of this study suggests that the site is not available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered viable and achievable (subject to any further necessary viability assessment). However it is not available. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is also currently unsuitable for residential development as it is in employment use and located within a protected employment site. The site long term suitability would be subject to a change to its availability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site	Rejected	The sites is in existing employment use and is within a protected employment area, therefore an alternative employment use on the site would likely be deemed suitable. However the viability and achievability are unknown and the site is understood to be unavailable - this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Suitability of the site for employment development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BIS020	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered likely to become available in the future; viable; and achievable. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is also considered suitable for residential development subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered suitable although its viability, availability and achievability are unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Suitability of the site for employment development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BIS021	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access(es), integration into the wider road network; and management of traffic congestion within the wider road network. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The sites availability, achievability and viability are unknown, where necessary this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. As the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access(es), integration into the wider road network; and management of traffic congestion within the wider road network. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BIS023	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable (where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include vehicle access onto Church Lane and potential adverse impact on historic environment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site	Long Term Potential - Subject to Further Detailed Assessment	The sites availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of its availability, achievability and viability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access to the site; and the sites size and location which is likely to limit the type of employment suitable on the site to office based. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BIS024	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. BIS025	Land East of Field Lane, Bishop's Castle	Bishops Castle	0.20	6	0.08	Greenfield site outside but adjacent to development boundary. Currently used as rough grazing and informal open space. Site boundaries comprised in the main of hedgerows and established mature trees esp. with E boundary with BIS023. Site is accessed by Field Lane - single track unpaved access track. Site has boundaries with BIS023 to E and agricultural land to W and S and existing residential development to N. Site is currently subject to appeal following refusal for one dwelling due to conflict with development plan.	Agricultural and residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is outside settlement boundary so is not currently suitable in policy terms. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access onto Field Lane. Design of development will need to take account of adjacent properties. The site is located within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. One or more TPO's are in proximity of the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Consideration should be given to the mature trees on the site.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is outside settlement boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Consideration should be given to the mature trees on the site.
BIS026	East of Schoolhouse Lane, Bishop's Castle	Bishops Castle	1.85	56	0.74	Elongated greenfield site to E of Bishops Castle outside and removed from development boundary. Site is currently in use for grazing and has boundaries on all sides comprised of trees and hedgerows with a number of mature established trees in hedgerows and area of woodland at NW corner of site. Site has road frontage to Schoolhouse Lane and A488 to S current vehicle access is via Schoolhouse Lane. Pedestrian and cycle access via Schoolhouse Lane (pavement) to established networks in Bishops Castle. Site is surrounded by countryside/farmland with some scattered dwellings.	Agricultural/countryside.	Not Suitable	The site is detached from the built form of the settlement and within an isolated location. Open market residential development is therefore contrary to policy. It is also a prominent location. The site is within 300m of a Conservation Area therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There are a number of veteran trees within proximity of the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is detached from the built form of the settlement and in a prominent location. As such employment development is limited to small scale rural enterprise and diversification schemes. The site is not considered suitable for other forms of employment development as it would represent an isolated block of development in otherwise open countryside. The site is within 300m of a Conservation Area therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS027	Land off Church Lane, Bishop's Castle	Bishops Castle	0.63	19	0.25	Greenfield site outside but adjacent to development boundary, Currently in agricultural use for rough grazing. Site has farmland/countryside on all four sides as well as some residential development on N and W boundaries on all four sides comprised hedgerows and trees. Site is accessed via Church Lane and has frontage to this as well but Lane is single track only already serving a number of residential properties.	Farmland/countryside and limited residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is outside settlement boundary so is not currently suitable in policy terms. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access onto Church Lane. Design of development will need to take account of adjacent properties. The site is located within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS028	Land off Welsh Street, Bishop's Castle	Bishops Castle	4.11	123	1.64	The site consists of a series of fields located to the north and south of Welsh Street, to the north east of Bishop's Castle.	Character to the north, south and west is predominantly agricultural. Character to the east is predominantly residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	A small portion of the site consists of agricultural buildings within the development boundary. The remainder of the site is located adjacent to but outside the development boundary. As such the site in its entirety is not suitable for open market residential development. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is sloping and the design and layout on the site must reflect this factor. The site is in proximity of a listed buildings, scheduled monument and conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site also contains a veteran tree, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	A small portion of the site consists of agricultural buildings within the development boundary. The remainder of the site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is sloping and the design and layout on the site must reflect this factor. Appropriate buffering of adjacent residential dwellings is necessary. The site is in proximity of a listed buildings, scheduled monument and conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site also contains a veteran tree, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BIS029	Bishop's Castle Business Park - Phase 2, Bishop's Castle	Bishops Castle	2.46	74	0.98	Scrubland currently allocated for employment development. The site would represent an extension to the adjacent successful Phase 1 Business Park.	To the east is a business part and sewerage treatment works. To the south is a playing field. To the west are allotments, natural screening and beyond the A458 residential development. To the north are agricultural fields.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. As such it is not appropriate for residential development. The site may have long term potential for residential development subject to appropriate policy changes; and management of any physical, heritage and environmental constraints present. For instance the site is adjacent to and accessed through a business park - the suitability of this access to serve a residential development would require Highway approval and the relationship between the two sites would need to be considered. The site is also adjacent to a Sewerage Treatment Works, the implications of this site on residential amenity would need to be considered.	Currently Suitable - Subject to Further Detailed Assessment	The site is an employment allocation. As such it is appropriate for employment development.

BIS025	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable (where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to confirmation of its availability and appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include vehicle access onto Field Lane and potential adverse impact on historic environment/heritage assets. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically vehicle access onto Field Lane and potential adverse impact on historic environment/heritage assets. If suitable mitigation of this identified constraint were possible, the sites development potential for other forms of employment would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BIS026	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. BIS028	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is in the majority located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access(es); integration into the wider road network; and management of traffic congestion within the wider road network. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. However as the site is in the majority located in open countryside, suitable employment is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access(es); integration into the wider road network; and management of traffic congestion within the wider road network. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BIS029	Currently Available	The site has been allocated for employment development. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been allocated for employment development. Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is an employment allocation, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. Suitability of the site for employment development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
BIS030	Land off Church Road, Bishops Castle	Bishops Castle	0.19	6	0.08	The site is a triangular area of vacant land within the wider setting of Bishops Castle Community College. It is directly accessible from Church Road.	Surrounding uses include sports pitches; a Leisure Centre, the Community College; residential properties and agricultural fields.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site has a relatively narrow road frontage, although there is an existing access established. The suitability of this access to serve development on the site is subject to highway approval. The site is also in proximity of a number of listed buildings and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site has a relatively narrow road frontage, although there is an existing access established. The suitability of this access to serve development on the site is subject to highway approval. The site is also in proximity of a number of listed buildings and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BRD001	Dirlot House & Winchester House, The Wheatlands, Bridgnorth	Bridgnorth	0.30	9	0.12	Site comprises two detached residential properties within large, mature landscaped curtilages. Two properties accessed from shared drive joining the highway at junction of The Wheatland's and Wenlock Road. Site boundaries to both properties at The Wheatland's, Wenlock Road and Westland Drive (at rear) formed from dense screens of mixed species trees and shrubs. Curtilage of Dirlot House crossed overhead by telephone lines between telegraph poles situated on rear boundary of Dirlot House (at Westland Drive) and within adjacent Police Station site (at The Wheatland's).	Dirlot House and Winchester House together are bounded by highways on three sides with residential properties to the remaining south west boundary and fronting onto The Wheatland's. Wenlock Road (north east) forms an arterial route into Bridgnorth town centre whilst The Wheatland's (east) and Westland Drive (west) serve the predominantly suburban residential developments surrounding the site. Wenlock Road (east of the site) also accommodates some existing commercial developments comprising the Police Station (corner of The Wheatland's) and the former local authority offices at the junction of Wenlock Road and Westgate, proposed for redevelopment.	Currently Suitable - Subject to Further Detailed Assessment	Residential redevelopment of this established residential site to intensify the use of the land would be a suitable proposal. The redevelopment of the land would require a sustainable design which protected existing significant features on the land, made appropriate provisions for existing and new infrastructure and recognised the characteristics and existing amenities of the area surrounding the site. The site is within 300m of a Listed Building. Development is therefore subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	Employment uses in a residential suburb would have clear public protection implications for the existing residential uses. Suitable employment uses would be limited to use classes without residential amenity implications (office based). The redevelopment of the land would require a sustainable design which protected existing significant features on the land, made appropriate provisions for existing and new infrastructure and recognised the characteristics and existing amenities of the area surrounding the site. The site is within 300m of a Listed Building. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BRD003	Land at Cantern Brook, Bridgnorth	Bridgnorth	2.76	83	1.11	The site comprises a single field currently in agricultural use. The site slopes markedly upwards towards the north away from Cantern Brook which forms the southern boundary of the site. The site is adjacent to but falls outside of the development boundary.	The site is bounded to the north and east by a continuation of the agricultural land in which the site is set. The west of the site is bounded by a strip of woodland which in turn borders onto the B4373. The other side of the B4373 is a mix of low lying pasture land around the brook and woodland. To the south of the site flows Cantern Brook which is wooded either side beyond which lies offices and the Stanley Lane Industrial Park. Nearby to the south east of the site there is some residential development	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. Therefore residential development is contrary to policy. However, the site outside the area located within flood zones 2 and/or 3 may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance it is unclear whether the site has a road frontage onto the B4373 if it does then the suitability of an access to and into the site from this location would be subject to highway approval, if it does not then there is still the potential to access the site through the adjacent employment site, however this would involve bridging the brook to the south of the site and would also be subject to highway approval. The site also contains and is in proximity of a number of TPOs, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The area located within flood zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site outside the area located within flood zones 2 and/or 3 may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance it is unclear whether the site has a road frontage onto the B4373 if it does then the suitability of an access to and into the site from this location would be subject to highway approval, if it does not then there is still the potential to access the site through the adjacent employment site, however this would involve bridging the brook to the south of the site and would also be subject to highway approval. The site also contains and is in proximity of a number of TPOs, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The area located within flood zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.
BRD005	Land west of Hook Farm Cottages, Bridgnorth	Bridgnorth	0.44	13	0.17	A small irregularly shaped broadly triangular field that is used for agricultural purposes. The site is flat and is bounded to the north/north east by a track leading to Hook Farm and to the south west by a hedgerow. The remainder of the site is bounded by residential development.	The field to the south west is currently used for agricultural purposes but is allocated for residential development within the SAMDEV. The field to the opposite of the track leading to Hook Farm is used for agricultural purposes. The remainder of the site to the southern end is bounded by residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. Therefore residential development is contrary to policy. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance there is a TPO within 30 metres of the site, therefore development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance there is a TPO within 30 metres of the site, therefore development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BRD006	Land off Mill Street, Cemetery Lane, Bridgnorth	Bridgnorth	2.95	88	1.18	This Green Belt site is oval in shape with its west side adjoining Mill Street and its southern tip adjoining Wolverhampton Road. The site is well screened from these points by the upward gradient and mature hedgerow. Internally the site is open space interspersed by the occasional tree and slopes sharply upwards from Mill Street with the site being quite undulating in nature.	To the west of the site is a further plot of open space whilst to the north is the cemetery and an area of woodland. To the south western side of the site is a small residential development.	Not Suitable	The site is considered unsuitable for development owing to its position outside the development boundary within the Green Belt. The severe topographical issues affecting the site's access and the site's proximity to a number of natural and heritage assets are also significant constraints to development upon the site. Specifically the site contains and is within proximity of a number of TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. BIS030	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is located in open countryside, consequently suitable employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment development, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BRD001	Availability Unknown	Availability of the site for redevelopment would need to be confirmed by both owners / occupiers of the two properties on the site. These two owners would appear to be content with the low density residential use of the site. The withdrawal of an application for residential redevelopment of Winchester House combined with Dirlot House in 2005 has maintained the existing, low density residential use of the site. Planning permission for the extension of Winchester House in 2012 has consolidated the existing residential use of this property.	Availability Unknown	Availability of the site for redevelopment would need to be confirmed by both owners / occupiers of the two properties on the site. These two owners would appear to be content with the low density residential use of the site. The withdrawal of an application for residential redevelopment of Winchester House combined with Dirlot House in 2005 has maintained the existing, low density residential use of the site. Planning permission for the extension of Winchester House in 2012 has consolidated the existing residential use of this property.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability Unknown	Viability of an employment redeveloping of the site needs to be investigated by comparing the asset value of the employment use with the current value of the existing properties proposed to be demolished, the development costs of the proposed new use, the developer contributions and off site works for the new use and the effect on the asset value from protecting significant features on the site and maintaining the existing amenity of the surrounding area.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered suitable; viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Suitability of the site for residential development is subject to confirmation of the sites availability; appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is suitable for office based employment, however its availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site therefore has long term potential, subject to confirmation of the sites availability, achievability and viability; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BRD003	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. The site, excluding the small area located within flood zones 2 and/or 3, may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include whether the site has a road frontage onto the B4373 if it does then the suitability of an access to and into the site from this location would be subject to highway approval, if it does not then there is still the potential to access the site through the adjacent employment site, however this would involve bridging the brook to the south of the site and would also be subject to highway approval. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of its availability, achievability and viability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include whether the site has a road frontage onto the B4373 if it does then the suitability of an access to and into the site from this location would be subject to highway approval, if it does not then there is still the potential to access the site through the adjacent employment site, however this would involve bridging the brook to the south of the site and would also be subject to highway approval. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BRD005	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered achievable; and viable (subject to any further necessary viability assessment). The availability of the site is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is located in open countryside, consequently employment development is contrary to policy. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BRD006	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify this matter. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Furthermore, the site is subject to some severe topographical issues to the road frontages limiting access to a track off the current cemetery road.	Rejected	Availability, achievability and viability of the site are unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
BRD006a	Sub-area of Land off Mill Street, Cemetery Lane, Bridgnorth	Bridgnorth	0.30	9	0.12	This Green Belt site is formed by the frontage to Mill Street of the associated site BRD006 and extends to a maximum depth from Mill Street of approx. 30m. The site is open space and slopes upwards away from Mill Street.	To the rear of the site is the remainder of site 006 which is a large site, overlaid in shape which is also Green Belt and which in character is open space interspersed by the occasional tree and slopes sharply upwards from Mill Street with the site being quite undulating in nature. To the south western side of the site is a small residential development. The site is bound to the north west by the access road to the cemetery.	Not Suitable	The site is considered unsuitable for development owing to its position outside the development boundary within the Green Belt. The severe topographical issues affecting the site's access and the site's proximity to a number of natural and heritage assets are also significant constraints to development upon the site. Specifically the site contains and is within proximity of a number of TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is considered unsuitable for development owing to its position outside the development boundary within the Green Belt. BRD007X	Land at Racecourse Farm	Bridgnorth	0.09	N/A	N/A						
BRD011	Land West of Bridgnorth	Bridgnorth	28.00	840	11.20	A large site that lies outside but adjacent to the development boundary. It originates in the south from the A458 adjacent to the Auction Centre/Retail Park and wraps around as far as Hook Farm to the north west of Bridgnorth. In doing so it spans Church Lane. The site is adjacent to SAMDEV sites BRID001 and O20a which lie between this site and the existing built form of Bridgnorth. In character the site is gently undulating and utilised for agricultural purposes with the presence of established trees and hedgerows dividing the component fields.	At the southern end the site borders to its eastern side the auction centre and retail park on the A458. To its northern end is the residential development at and around Hook Farm Rd. At its mid point the site lies adjacent to Tasley village. Currently the remainder of the site is bordered by agricultural land but is bordered to its eastern side by two sites BRID001 and O20a which are allocated by SAMDEV for housing.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site contains and is in proximity of trees protected by Tree Protection Orders; therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity to a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There is a historic landfill to the north of the site which will require appropriate consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	he site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site contains a small area of identified natural/semi-natural open space. This element of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have some long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site contains and is in proximity of trees protected by Tree Protection Orders; therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity to a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There is a historic landfill to the north of the site which will require appropriate consideration.
BRD012	Land off Stourbridge Road, Bridgnorth	Bridgnorth	1.95	59	0.78	The site is an area of green open space within the built form of Bridgnorth and is screened by trees separating the site from residential development in the main and banking and trees to the Stourbridge Road frontage. The site is reasonably flat.	The site is largely bounded by established and new residential development between which and the site are established trees and hedgerow. The site has a frontage to Stourbridge Road to the other side of which is established residential development.	Currently Suitable - Subject to Further Detailed Assessment	The site is considered developable subject to appropriate management of any physical, heritage and environmental constraints. For instance the ability to provide access is subject to Highway Officer advice. The site contains and is within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a Conservation and Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is considered developable subject to appropriate management of any physical, heritage and environmental constraints. For instance the ability to provide access is subject to Highway Officer advice. The site contains and is within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. BRD014	Land off Stourbridge Road, East of Faraday Drive, Bridgnorth	Bridgnorth	5.66	170	2.26	This Green Belt site is adjacent to the development boundary. It is currently utilised for agricultural purposes. The site, which is long (approx. 450m) and relatively narrow (approx. 175m) slopes lengthwise upwards from the northern side of the A458.	To its western side the site is bordered by an industrial estate with its immediate neighbour being a municipal waste site. To the east is open farmland from which it is shielded by a strip of mature hedgerows and woodland. The strip of agricultural land continues beyond the site boundary to the north at which point it is bordered to the west by residential development. To the southern side of the A458 is a further industrial estate.	Not Suitable	This site is adjacent to but outside the development boundary and falls within the Green Belt. Therefore the site is not suitable for development. Further the ability to access the site would be subject to highway approval. The site is immediately adjacent to an area of Ancient Woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a number of trees subjected to a TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. Due to the neighbouring uses on the adjacent industrial estate, particularly the waste disposal site, significant buffers would be necessary which may mean that the site is unsuitable for residential development.	Not Suitable	This site is adjacent to but outside the development boundary and falls within the Green Belt. Therefore the site is not suitable for development. Further the site is immediately adjacent to an area of Ancient Woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a number of trees subjected to a TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.

Rejected	The site is considered available, viable and achievable. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the slope and access to the site and the immediate proximity of an area of Ancient Woodland and proximity to a number of trees with Tree Protection Orders.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such employment development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
BRD016	Land north of the A458 and west of the B4363, Bridgnorth	Bridgnorth	2.86	86	1.15	An irregularly shaped site separated from the A458 by a wooded embankment. The site is currently in agricultural use and slopes down west to east towards the nearby River Severn	To the west is open space associated with Oldbury Wells School whilst to the south of the site is a wooded embankment sloping upwards towards the A458. Much of the remaining surrounding areas are woodland or agricultural with established hedgerows separating the site from these.	Not Suitable	The site is located adjacent to but outside the development boundary. Therefore residential development is contrary to policy. The site is also unsuitable in the longer term due to the presence of a Scheduled Monument on approximately 35% of the site, consequently development is likely to lead to substantial harm to or total loss of significance of one or more designated heritage assets and as such is contrary to national policy. Additionally all the trees on the site and many in proximity of the site, along the A458 and B4363 (only potential points of access) are subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Suitable	The site is located adjacent to but outside the development boundary, as such employment development potential is currently limited to small scale rural enterprise and diversification schemes. However the site is unsuitable due to the presence of a Scheduled Monument on approximately 35% of the site, consequently development is likely to lead to substantial harm to or total loss of significance of one or more designated heritage assets and as such is contrary to national policy. Additionally all the trees on the site and many in proximity of the site, along the A458 and B4363 are subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
BRD017	Land Adjacent to Ludlow Road, South of the A458, Bridgnorth	Bridgnorth	1.22	37	0.49	The site comprises a single small field to the eastern side of the Ludlow Rd commencing approx. 120m from the roundabout with the A458. The land is currently used for agriculture and is gently undulating in nature. The site is enclosed by established hedgerow and small trees. The site falls outside the development boundary and is not adjacent to it.	The site is surrounded by similar sized fields to either side of the Ludlow Rd.	Not Suitable	The site is separated from the built form of Bridgnorth by a wooded field and the A458 and falls outside of the development boundary of Bridgnorth, development on the site is therefore contrary to policy. Furthermore the site in itself is unsuitable for development in the longer term and would only have long term potential as part of a wider development. The ability to provide appropriate pedestrian, cyclist and vehicular access to and into the site will require significant consideration and require highway approval.	Not Suitable	The site is separated from the built form of Bridgnorth by a wooded field and the A458 and falls outside of the development boundary of Bridgnorth, as such employment development is limited to small scale rural enterprise and diversification schemes. The site in itself is unsuitable for other forms of employment development due to its separation from the built form of the settlement. The site would only have long term potential as part of a wider development. The ability to provide appropriate pedestrian, cyclist and vehicular access to and into the site will require significant consideration and require highway approval.
BRD018X	Bowers Land adjacent 46 Listley Rd	Bridgnorth	0.06	N/A	N/A						
BRD019	Ludlow Road, Bridgnorth	Bridgnorth	0.62	19	0.25	This small wedge-shaped site lies within the land between the A458 and Ludlow Rd at their roundabout junction and is well shielded behind deep verges and dense hedgerow/trees. The falls into three broad areas: the western part of the site (also separately proposed as BDR019a) is a relatively open, square-shaped area; secondly a central area which was historically used for waste disposal and finally an eastern tapering area of land. The latter two areas are less open in character compared to the western part of the site. The land is gently undulating.	The site is surrounded to the west, south and east by similar fields currently in agricultural use. To the north of the site, beyond the barriers formed by the A458 and trees and hedgerow either side of the road is the built form of Bridgnorth with a children's nursery being immediately opposite	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. Therefore residential development is contrary to policy. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the residential built form of the settlement by the A458, significant consideration will need to be given about how the site could integrate into the settlement given this physical barrier. The ability to provide an appropriate pedestrian, cyclist and vehicular access to and into the site will require significant consideration and is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the residential built form of the settlement by the A458, significant consideration will need to be given about how the site could integrate into the settlement given this physical barrier. The ability to provide an appropriate pedestrian, cyclist and vehicular access to and into the site will require significant consideration and is subject to highway approval.
BRD019a	Ludlow Rd	Bridgnorth	0.26	8	0.10	This small square-shaped site lies within the land between the A458 and Ludlow Rd at their roundabout junction and is well shielded behind deep verges and dense hedgerow/trees. The site is a relatively open, square-shaped area. The land is gently undulating.	The site is surrounded to the west, south and east by similar fields currently in agricultural use. To the north of the site, beyond the barriers formed by the A458 and trees and hedgerow either side of the road is the built form of Bridgnorth with a children's nursery being immediately opposite	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. BRD016	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, achievable and viable. Where necessary, this will be informed by further discussions with landowners and/or their representatives and any necessary viability assessment. However the site is not considered suitable as it is located beyond the development boundary in the countryside and contains a Scheduled Monument therefore development would be against national policy. Additionally the site is currently outside of the development boundary and contains and is adjacent to a number of trees subjected to Tree Preservation Orders, a wildlife site, a conservation area and a number of listed buildings, the impact of development on which would need to be assessed.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives and any further viability assessment. However the site is not considered suitable as it is located beyond the development boundary, which limits the suitable forms of employment to rural enterprise and diversification schemes in the countryside and crucially contains a Scheduled Monument therefore development would be against national policy. Additionally the site is currently outside of the development boundary and contains and is adjacent to a number of trees subjected to Tree Preservation Orders, a wildlife site, a conservation area and a number of listed buildings, the impact of development on which would need to be assessed.
BRD017	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. BRD021	Land adj. B4363	Bridgnorth	18.93	568	7.57	A large irregularly shaped site formed of a single field. The site is in agricultural use and has a marked slope upwards NE-SW away from the A458.	The site is bound to the north east by the A458 on the other side of which commences the built form of Bridgnorth. The site is otherwise entirely surrounded by agricultural land.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. Therefore residential development is contrary to policy. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is in proximity of the village of Oldbury and the potential release of such a large area in this location will require careful consideration. The built form of Oldbury in proximity of the site is primarily residential therefore appropriate buffering of these dwellings would be necessary. The site is separated from the residential built form of the settlement by the A458, significant consideration will need to be given about how the site could integrate into the settlement given this physical barrier. The ability to provide an appropriate pedestrian, cyclist and vehicular access to and into the site will require significant consideration, particularly as the site is separated from all roads apart from the A458 and is separated from the existing roundabouts onto the A458. Any access would be subject to highway approval. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is in proximity of the village of Oldbury and the potential release of such a large area in this location will require careful consideration. The built form of Oldbury in proximity of the site is primarily residential therefore appropriate buffering of these dwellings would be necessary. The site is separated from the residential built form of the settlement by the A458, significant consideration will need to be given about how the site could integrate into the settlement given this physical barrier. The ability to provide an appropriate pedestrian, cyclist and vehicular access to and into the site will require significant consideration, particularly as the site is separated from all roads apart from the A458 and is separated from the existing roundabouts onto the A458. Any access would be subject to highway approval. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BRD022	Conduit Farm, between Ludlow Road and the bypass	Bridgnorth	6.30	189	2.52	The site sits south of the A458 which separates it from the built form of Bridgnorth. The site, which slopes gently upwards N-S, contains agricultural land and the dwellings and other buildings associated with conduit Farm. Near the farm buildings and along the road is an area of woodland.	To the north is the A458 which separates the site from the built form of Bridgnorth. Other sides of the site are surrounded by agricultural land.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. Therefore residential development is contrary to policy. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the residential built form of the settlement by the A458, significant consideration will need to be given about how the site could integrate into the settlement given this physical barrier. The ability to provide an appropriate pedestrian, cyclist and vehicular access to and into the site will require significant consideration, particularly as the site is separated from all roads apart from the A458 and is separated from the existing roundabouts onto the A458. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BRD023	Land West of Ludlow Road and South of A458, Bridgnorth	Bridgnorth	12.78	383	5.11	The site consists of a series of agricultural fields situated to the south of Bridgnorth and the A458 and to the west of Ludlow Road. The site lies adjacent to an existing employment allocation.	Land uses to the east, west and south are predominantly agricultural, although the adjacent site to the west is allocated for employment development. North of the A458 uses are predominantly residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is adjacent to but outside the development boundary. However, the site is adjacent to sites allocated for employment in the SAMDEV plan. Therefore open market residential development is contrary to policy. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the residential built form of the settlement by the A458, significant consideration will need to be given about how the site could integrate into the settlement given this physical barrier. The layout, landscaping and buffering of the site would need to reflect its location adjacent to the A458 and an employment allocation. The ability to provide an appropriate pedestrian, cyclist and vehicular access to and into the site will require significant consideration and is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance consideration will need to be given about how the site will relate to the settlement and adjacent employment allocation. The ability to provide an appropriate pedestrian, cyclist and vehicular access to and into the site will require significant consideration and is subject to highway approval.
BRD024	Land at Tasley, south of A458, Bridgnorth	Bridgnorth	8.80	264	3.52	An agricultural field south of the A458 and Bridgnorth. The site is allocated for employment development.	Character to south, east and west is predominantly agricultural. Character to north is residential and commercial (livestock market).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. As such open market residential development is contrary to policy. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the residential built form of the settlement by the A458, significant consideration will need to be given about how the site could integrate into the settlement given this physical barrier. The ability to provide an appropriate pedestrian, cyclist and vehicular access to and into the site will require significant consideration and is subject to highway approval. The site is also in proximity of several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is an employment allocation. As such it is appropriate for employment development. Suitability is subject to management of any physical, heritage and environmental constraints present. For instance the site is separated from the residential built form of the settlement by the A458, significant consideration will need to be given about how the site could integrate into the settlement given this physical barrier. The ability to provide an appropriate pedestrian, cyclist and vehicular access to and into the site will require significant consideration and is subject to highway approval. Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
BRD026	Land at Old Worcester Road, Bridgnorth	Bridgnorth	1.40	42	0.56	Small area of land located within an existing and committed employment site. The site is allocated for employment development.	Character to the north is vacant land (committed for employment). Character to the west is employment. Character to the south and east is agricultural.	Not Suitable	The site is an employment allocation. Therefore residential development is contrary to policy. Additionally, the site is surrounded by an employment site/commitments, this is unlikely to represent an appropriate location for residential development as residential amenity would be impacted by these surrounding uses. Additionally residential development on this site would result in additional receptors for the employers on the adjacent employment site/commitments. The site is therefore unsuitable for residential development.	Currently Suitable - Subject to Further Detailed Assessment	The site is an employment allocation. As such it is appropriate for employment development. Suitability is subject to management of any physical, heritage and environmental constraints present.
BRD027	Former Builders Yard, Innage Lane, Bridgnorth	Bridgnorth	0.54	16	0.21	A former builders yard currently vacant, located to the north of Bridgnorth town centre.	The surrounding character is diverse, reflecting the sites central location. Uses include residential dwellings, various commercial uses, public open spaces, car parking, a fire station and a hospital.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Bridgnorth development boundary. As such open market residential development is suitable in principle. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance, the ability to provide an appropriate access to and into the site is subject to highway approval. A small portion of the site is located within a conservation area and the site is also located in proximity of a conservation area and a number of listed buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is in close proximity of sensitive uses and therefore a sensitive layout, landscaping and buffering is required.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Bridgnorth development boundary. As such employment development is suitable in principle. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance, the ability to provide an appropriate access to and into the site is subject to highway approval. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is in close proximity of sensitive uses and therefore a sensitive layout, landscaping and buffering is required.
BRD028	Land east Of Oldbury Road, Bridgnorth	Bridgnorth	0.71	21	0.28	An irregularly shaped site located to the rear of residential dwellings on Oldbury Road.	Surrounding character is a mix of residential and agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such open market residential development is contrary to policy. Furthermore, much of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is in proximity of a conservation area, scheduled monument and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, much of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is in proximity of a conservation area, scheduled monument and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
P52	Land north east of Hermitage Hill Coppice, north east of Bridgnorth	Bridgnorth	24.20	726	9.68	The site consists of a series of agricultural fields to the north east of Bridgnorth.	Surrounding character is predominantly agricultural. However there is also a wooded area to the west of the site and a cemetery to the south west of the site.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore, the site is separated from the built form of Bridgnorth by an elevated area of countryside containing mature woodland, a cemetery and agricultural fields. The site projects into the countryside north of Bridgnorth. The relationship between the site and Bridgnorth will require due consideration. The site undulates, which will require due consideration. The site is in proximity of a scheduled monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a local wildlife site and RIG, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The site is located in the Green Belt. As such employment development is contrary to policy. Furthermore, the site is separated from the built form of Bridgnorth by an elevated area of countryside containing mature woodland, a cemetery and agricultural fields. The site projects into the countryside north of Bridgnorth. The relationship between the site and Bridgnorth will require due consideration. The site undulates, which will require due consideration. The site is in proximity of a scheduled monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a local wildlife site and RIG, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
P53a	Land north of the A454, east of Bridgnorth	Bridgnorth	12.73	382	5.09	The site consists of two agricultural fields located to the north of the A454. Site boundaries are defined by the A454 to the south, rural lanes to north and west. The sites eastern boundary is defined by agricultural field boundaries.	Surrounding character is predominantly agricultural.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore the site is separated from the built form of Bridgnorth by agricultural fields. The site projects into the countryside east of Bridgnorth. The relationship between the site and Bridgnorth will require due consideration. Parts of the site undulate, which will require due consideration. The site is also in proximity of a scheduled monument and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. Site Reference	Residential Availability Conclusion	Residential Availability Summary	Employment Availability Conclusion	Employment Availability Summary	Residential Achievability Conclusion	Residential Viability Conclusion	Residential Achievability/Viability Conclusion	Employment Achievability Conclusion	Employment Viability Conclusion	Employment Achievability/Viability Conclusion	Residential Overall Conclusion	Residential Overall Summary	Employment Overall Conclusion	Employment Overall Summary
BRD026	Currently Available	The site has been allocated for employment development. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been allocated for employment development. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been allocated for employment development. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However, the site is not suitable for development as it is an employment allocation, therefore residential development is contrary to policy. Furthermore, the site is surrounded by an employment site/commitments, this is unlikely to represent an appropriate location for residential development as residential amenity would be impacted by these surrounding uses. Additionally residential development on this site would result in additional receptors for the employers on the adjacent employment site/commitments. The site is therefore unsuitable for residential development.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable, available; achievable; and viable (subject to any further necessary viability assessment). Suitability of the site for employment development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment.
BRD027	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purposes of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). The site is also considered suitable for development subject to appropriate assessment and management of any impact on the physical, environmental; or heritage constraints to the site. Specifically part of the site is located within a conservation area and it is in proximity of sensitive uses (hospital). If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is considered suitable for development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically part of the site is located within a conservation area and it is in proximity of sensitive uses (hospital). If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BRD028	Currently Available	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but it is understood that there remains development interest; the site is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but it is not clear from this application that the site is available for development and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, achievable and viable for development, subject to any further necessary viability assessments. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Furthermore, the site is separated from the built form of Bridgnorth by an elevated area of countryside containing mature woodland, a cemetery and agricultural fields. The site projects into the countryside north of Bridgnorth. The site undulates, which will require due consideration. The relationship between the site and Bridgnorth will require due consideration. The site is also in proximity of a number of heritage and environmental assets.	Rejected	The site is considered available, achievable and viable for development, subject to any further necessary viability assessments. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such employment development on the site would be contrary to local and national policy. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Furthermore, the site is separated from the built form of Bridgnorth by an elevated area of countryside containing mature woodland, a cemetery and agricultural fields. The site projects into the countryside north of Bridgnorth. The relationship between the site and Bridgnorth will require due consideration. The site undulates, which will require due consideration. The site is also in proximity of a number of heritage and environmental assets.
P53a	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable. Its availability is unknown. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such employment development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Furthermore, the site is separated from the built form of Bridgnorth by agricultural fields. The site projects into the countryside east of Bridgnorth. The relationship between the site and Bridgnorth will require due consideration. Parts of the site undulate, which will require due consideration.	Rejected	Availability, achievability and viability of the site are unknown. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such employment development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. P53b	Land north of the A454 and Swancote, north east of Bridgnorth	Bridgnorth	74.36	2231	29.74	A large site located to the north east of Bridgnorth. The site consists of a large number of agricultural fields bounded by the A454 to the south and rural lanes to the east, west and north.	Surrounding uses are predominantly agricultural.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore the site is separated from the built form of Bridgnorth by agricultural fields. The site projects into the countryside east of Bridgnorth. The relationship between the site and Bridgnorth will require due consideration. Parts of the site undulate, which will require due consideration. The site is also in proximity of a scheduled monument and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.	Not Suitable	The site is located in the Green Belt. As such open employment development is contrary to policy. Furthermore the site is separated from the built form of Bridgnorth by agricultural fields. The site projects into the countryside east of Bridgnorth. The relationship between the site and Bridgnorth will require due consideration. Parts of the site undulate, which will require due consideration. The site is also in proximity of a scheduled monument and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.
P54	Land south of the A454 and Swancote, east of Bridgnorth	Bridgnorth	130.79	3924	52.31	A large site located to the east of Bridgnorth. The site consists of a large number of agricultural fields bounded by the A454 to the north, Broom Lane to the east, the A454 to the west and residential curtilages associated with dwellings at The Hobbins and The Hobbins road.	Character to the east, north and west is predominantly agricultural. To the south character is a mix of residential (The Hobbins), commercial (Stanmore Industrial Estate) and agricultural.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore the site is separated from the built form of Bridgnorth by agricultural fields, although it is associated with the built form of The Hobbins and Stanmore Industrial Estate. The site projects into the countryside east of Bridgnorth. The relationship between the site and Bridgnorth will require due consideration. Parts of the site undulate, which will require due consideration. The site is also in proximity of a scheduled monument and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.	Not Suitable	The site is located in the Green Belt. As such employment development is contrary to policy. Furthermore the site is separated from the built form of Bridgnorth by agricultural fields, although it is associated with the built form of The Hobbins and Stanmore Industrial Estate. The site projects into the countryside east of Bridgnorth. The relationship between the site and Bridgnorth will require due consideration. Parts of the site undulate, which will require due consideration. The site is also in proximity of a scheduled monument and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.
P55	Hermitage Hill, Bridgnorth	Bridgnorth	14.33	430	5.73	A linear site located to the east of Bridgnorth, comprising small pastoral fields and mature woodland.	Character to the north is a mix of agricultural land and woodland. Character to the east is predominantly agricultural. Character to the west is a mix of residential and commercial. Character to the south is a mix of agricultural and commercial.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore, the site has an adverse topography, which is likely to severely limit its potential for development. The site contains a scheduled monument, therefore development on this element of the site and an appropriate buffer is likely to lead to substantial harm to or total loss of significance of the heritage asset and as such is contrary to national policy. Much of the site contains ancient woodland and a RIG, therefore development is likely to have an adverse effect on one or more areas of ancient woodland and as such is contrary to national and international legislation - the site is therefore unsuitable for development. The site also contains a significant number of trees subject to TPO protection (generally consistent with the extent of the area of ancient woodland) which will similarly limit the sites capacity for development and mean that development on the site would be subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The ability to provide an appropriate access into the site (particularly given the sites topography) is subject to highway approval. The site is adjacent to residential dwellings and an existing/allocated employment site, any development proposed would need to complement this setting. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Suitable	The site is located in the Green Belt. As such employment development is contrary to policy. Furthermore, the site has an adverse topography, which is likely to severely limit its potential for development. The site contains a scheduled monument, therefore development on this element of the site and an appropriate buffer is likely to lead to substantial harm to or total loss of significance of the heritage asset and as such is contrary to national policy. Much of the site contains ancient woodland and a RIG, therefore development is likely to have an adverse effect on one or more areas of ancient woodland and as such is contrary to national and international legislation - the site is therefore unsuitable for development. The site also contains a significant number of trees subject to TPO protection (generally consistent with the extent of the area of ancient woodland) which will similarly limit the sites capacity for development and mean that development on the site would be subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The ability to provide an appropriate access into the site (particularly given the sites topography) is subject to highway approval. The site is adjacent to residential dwellings and an existing/allocated employment site, any development proposed would need to complement this setting. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
P56	Land at Hermitage Farm, Bridgnorth	Bridgnorth	77.59	2328	31.03	A large site located to the east of Bridgnorth. The site consists of a large number of agricultural fields bounded by the A458 to the south, A454 to the east, Hermitage Hill to the west, and the B4363 to the north.	Character to the south is predominantly agricultural. Character to the north is a mix of agricultural, woodland and a cemetery. Character to the west is woodland located on Hermitage Hill beyond which are residential dwellings and commercial uses within the settlement of Bridgnorth. Character to the east is a mix of woodland at Stanmore Country Park and agricultural land, beyond which are residential dwellings at The Hobbins and commercial uses at Stanmore Industrial Estate.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore, the relationship between development on the site and the settlement of Bridgnorth will require due consideration. The ability to provide an appropriate access to and through the site is subject to highway approval. The site contains a small area of ancient woodland; trees subject to TPO protection; and part of a RIG in its north western corner, therefore development on this element of the site and within an appropriate buffer is likely to have an adverse effect on an area of ancient woodland and as such is contrary to national and international legislation; and a locally designated site, and as such is contrary to policy. This element of the site is therefore unsuitable for development. Similarly the site contains part of a scheduled monument in its north western corner, development in this element of the site and an appropriate buffer is likely to lead to substantial harm to or total loss of significance of one or more designated heritage assets and as such is contrary to national policy. This element of the site is therefore unsuitable for development. The site is also in proximity of further ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is in proximity of a local wildlife site and the remainder of the RIG, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located in the Green Belt. As such employment development is contrary to policy. Furthermore, the relationship between development on the site and the settlement of Bridgnorth will require due consideration. The ability to provide an appropriate access to and through the site is subject to highway approval. The site contains a small area of ancient woodland; trees subject to TPO protection; and part of a RIG in its north western corner, therefore development on this element of the site and within an appropriate buffer is likely to have an adverse effect on an area of ancient woodland and as such is contrary to national and international legislation; and a locally designated site, and as such is contrary to policy. This element of the site is therefore unsuitable for development. Similarly the site contains part of a scheduled monument in its north western corner, development in this element of the site and an appropriate buffer is likely to lead to substantial harm to or total loss of significance of one or more designated heritage assets and as such is contrary to national policy. This element of the site is therefore unsuitable for development. The site is also in proximity of further ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is in proximity of a local wildlife site and the remainder of the RIG, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.

Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
P58a	Land north of Stanmore Industrial Estate	Bridgnorth	6.84	205	2.74	The site consists of two agricultural fields enclosed by Stanmore Industrial Estate to the south and west, a track to the east and The Hobbins Road/access road/an agricultural field boundary to the north.	Character to the north and east is predominantly agricultural. Character to the west and south is predominantly commercial, on the adjacent Stanmore Industrial Estate.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore, the site is closely associated with the adjacent Stanmore Industrial Estate and employment uses upon it, this will require due consideration.	Not Suitable	The site is located in the Green Belt. As such employment development is contrary to policy.
P58b	Land south of Hobbins Road, Stanmore	Bridgnorth	6.79	204	2.72	The site consists of a number of small agricultural fields, located to the north of Stanmore Industrial Estate. The site is bounded by Hobbins Road to the north, property curtilages to the west and an access and agricultural field boundaries to the south and an agricultural field boundary to the east.	Character to the north and east is predominantly agricultural. Character to the west and south is predominantly commercial, on the adjacent Stanmore Industrial Estate.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore, the site is closely associated with the adjacent Stanmore Industrial Estate and employment uses upon it, this will require due consideration.	Not Suitable	The site is located in the Green Belt. As such employment development is contrary to policy.
P59	Land east of Stanmore Industrial Estate	Bridgnorth	41.52	1246	16.61	A generally linear site consisting of a series of agricultural fields to the east of Stanmore and Stanmore Industrial Estate and Stanmore Country Park.	Character to the north, east and south is predominantly agricultural. Character to the west is more diverse, being agricultural to the west of the northern element of the site, commercial uses (associated with Stanmore Industrial Estate) and woodland (associated with Stanmore Country Park) to the west of the central element of the site, and a mix of residential and agricultural uses to the west of the southern element of the site.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore, the site is closely associated with the adjacent Stanmore Industrial Estate and employment uses upon it, this will require due consideration.	Not Suitable	The site is located in the Green Belt. As such employment development is contrary to policy.
P61	Land south of the A458, Bridgnorth	Bridgnorth	97.19	2916	38.88	A very large site located to the south of the A458.	Character to the north, south and east is predominantly agricultural, although there is also a caravan site to the north-east of the site. Character to the west is also agricultural beyond which it is commercial.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore, the site projects into the countryside east of Bridgnorth. The site is very large and the relationship between the site and Bridgnorth will require due consideration. Parts of the site undulate, which will require due consideration. Part of the site contains and is in proximity of a conservation area and parts of the site are also in proximity of listed buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site also contains and is in proximity to trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Suitable	The site is located in the Green Belt. As such employment development is contrary to policy. Furthermore, the site projects into the countryside east of Bridgnorth. The site is very large and the relationship between the site and Bridgnorth will require due consideration. Parts of the site undulate, which will require due consideration. Part of the site contains and is in proximity of a conservation area and parts of the site are also in proximity of listed buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site also contains and is in proximity to trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
P62	Land south of Hillside Avenue, Bridgnorth	Bridgnorth	14.91	447	5.96	The site lies to the south of residential dwellings on Hillside Avenue and Bridgnorth Aluminium.	Character to the south and east is predominantly agricultural. Character to the north is commercial (Bridgnorth Aluminium). Character to the west is a mix of residential and agricultural.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore, the ability to provide an appropriate access to and through the site is subject to highway approval. The site's proximity to a significant employment site (Bridgnorth Aluminium), appropriate buffering will therefore be necessary to ensure that any use on this site does not impact on the operation of the adjacent employment site and that residential amenity on the site is maintained. The site contains and is in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is in proximity of several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located in the Green Belt. As such employment development is contrary to policy. Furthermore, the ability to provide an appropriate access to and through the site is subject to highway approval. The site contains and is in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is in proximity of several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.

P63	Land east/north of the River Severn, Bridgnorth	Bridgnorth	61.06	1832	24.42	A linear site which follows the route of the River Severn to the south of Bridgnorth. The site consists of a series of agricultural fields.	Character to the south east and west is predominantly agricultural. Character to the north is a mix of residential and a caravan park.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore, the northern portion of the site contains an area of natural/semi-natural open space, this area of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Additionally, much of the site is located within flood zones 2 and/or 3, therefore this site is located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site projects into the countryside. The relationship of the site to the settlement of Bridgnorth will require due consideration. The ability to provide an appropriate access to and through the site is subject to highway approval. Part of the site contains a conservation area; other parts of the site are in proximity of conservation areas; a scheduled monument; and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site lies adjacent to a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site also contains a veteran tree and is in proximity of other veteran trees and trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.	Not Suitable	The site is located in the Green Belt. As such employment development is contrary to policy. Furthermore, the northern portion of the site contains an area of natural/semi-natural open space, this area of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Additionally, much of the site is located within flood zones 2 and/or 3, therefore this site is located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Much of the site is located within flood zones 2 and/or 3. The site projects into the countryside. The relationship of the site to the settlement of Bridgnorth will require due consideration. The ability to provide an appropriate access to and through the site is subject to highway approval. Part of the site contains a conservation area; other parts of the site are in proximity of conservation areas; a scheduled monument; and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site lies adjacent to a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site also contains a veteran tree and is in proximity of other veteran trees and trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.
BRO004	Land between Rough Lane and Pound Lane, Broseley	Broseley	4.71	141	1.88	Site is single parcel as agricultural land currently used as rough grazing, some farm buildings in northern part of site. Scattered mature trees and remnant hedgerows throughout site. Strong boundaries to W with existing residential properties on Forester Rd and Blakeway Close; N with residential properties on Collins Close and Rough Lane; E clearly defined boundary of hedgerows and trees with agricultural field; S with Caughley Rd and further agricultural land. Slight upward slope from N to S. Site is outside but adjacent to development boundary. Land to N between Rough Lane and Coalport Rd pp refused (14/04018/OUT) and appeal dismissed Feb 2016.	Agricultural to S and E	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is outside settlement boundary so is not currently suitable in policy terms. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access. Detailed consultation with Coal Authority also required. Investigation and management of previous mining required. The site is within 300m of a Conservation Area and a Listed Building. Development is therefore subject to an assessment of impact on the significance of the settings of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There are mature trees and hedgerows along site boundaries which should be retained.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for wider forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from highway department regarding access. Investigation and management of previous mining required. Detailed consultation with Coal Authority also required. The site is within 300m of a Conservation Area and a Listed Building. Development is therefore subject to an assessment of impact on the significance of the settings of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There are mature trees and hedgerows along site boundaries which should be retained. The site is in a prominent location, which could affect the suitability for certain forms of employment.
BRO006X	Land east of Bridge Road	Broseley	0.05	N/A	N/A						
BRO007	Land to east of Dark Lane, Broseley	Broseley	1.21	36	0.48	Site lies to E of Dark Lane outside development boundary and to E and N of main settlement. Is agricultural land currently used for rough grazing or open land - has been farmed more intensively in past. Irregular shaped parcel with ill-defined boundaries comprised mature trees and overgrown hedgerows on all 4 sides. Not directly adjacent to development boundary - separated by Dark Lane and residential property (3 Dark Lane). Slight downward slope from NW to SE. Access via track to Dark Lane - no clear direct access to Dark Lane. Site is opposite Dark Lane site with pp for 88 dwells (14/02911/FUL) works commenced.	Agric land - rough grazing. Boundary with single property (3 Dark Lane).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is in countryside for policy purposes so not suitable. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from Highways Team regarding access to and into the site. Investigation and management of historic mining. Detailed consultation with Coal Authority also required. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Area and several Listed Buildings. Development is therefore subject to an assessment of impact on the significance of the settings of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for wider forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. BRO010	Land off Cherrybrook Drive, Broseley	Broseley	1.08	32	0.43	Irregular shaped site adjacent to development boundary. Currently 'scrub' woodland and established trees as extension of tree cover on 'Stocking Mound'. Site lies to E of Cherry Brook Drive to N of existing industrial site off Cockshutt Lane (site BRO002) to S of Broseley Cricket Club and existing wooded area known as 'Stocking Mound'. Boundaries are clearly defined with residential properties to W and industrial site to S and E; boundary with woodland to N not clearly defined. Road access only onto Cherry Brook Drive; pedestrian access only via existing network via Cherry Brook Drive.	Residential to W; Industrial to S and E woodland and cricket ground to N.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is in countryside for policy purposes so not suitable. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance comments will be needed from Highways Team regarding the suitability of pedestrian, cyclist and vehicular access. Assessment and management of previous coal mining history. Detailed consultation with Coal Authority also required. There are numerous mature trees on the site which will require significant consideration. The site is also within proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is adjacent to an existing protected employment site, this will require due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for wider forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. P63	Availability Unknown	The site has been identified as part of the Green Belt Review undertaken for Shropshire. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	The site has been identified as part of the Green Belt Review undertaken for Shropshire. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable. Its availability is unknown. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Furthermore, the northern portion of the site contains an area of natural/semi-natural open space, this area of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Additionally, much of the site is located within flood zones 2 and/or 3, therefore this site is located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site projects into the countryside. The relationship of the site to the settlement of Bridgnorth will require due consideration. The ability to provide an appropriate access to and through the site is subject to highway approval. Part of the site contains a conservation area. The site also lies adjacent to a local wildlife site.	Rejected	Availability, achievability and viability of the site are unknown. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such employment development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. BRO011	Land At Cobwell Road, Bridge Road, Broseley	Broseley	0.52	16	0.21	Wedge shaped parcel of land outside development boundary but within conservation area. Currently scrub trees with some mature established trees. Bounded by residential development to W on opposite side Bridge Rd and Off Cobwell Rd to E; to N by residential and further woodland. Access either onto Bridge Rd or Cobwell road; pedestrian access via existing links on Bridge Rd, Cobwell Rd or Quarry rd. Site slopes S to N down Bridge Rd. Site has history of past mining and industrial use and is in Coal Authority High Risk area. And is in close proximity to Workhouse Coppice Local Wildlife Site.	Residential - estate development off Cobwell rd. and single plots on Bridge Rd. Woodland to N running down towards Ironbridge Gorge.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is in countryside for policy purposes so not suitable. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance advice will be needed regarding possible complications arising from previous coal mining history and therefore detailed consultation with Coal Authority also required. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this Ancient Woodland. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of 3 Wildlife Sites. Development is subject to an assessment of the impact on these locally designated sites.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a World Heritage Site and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Approximately half the site is covered by a group TPO, the site is also within proximity of one or more TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance advice will be needed regarding possible complications arising from previous coal mining history and therefore detailed consultation with Coal Authority also required. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There are mature trees on the site which will need to be considered.
BRO014	Land off Spout Lane	Broseley	0.35	10	0.14	Small parcel on W edge of settlement. Currently no discernible use - scrub woodland vegetation with some mature trees on boundaries; no obvious agricultural use maybe some informal amenity use. Outside development boundary but separated by residential properties on Bridge rd. Within conservation area and in close proximity to Work House Meadows and The Mines Local Wildlife Sites and Benthall Edge Wood Ancient Woodland. Boundary to N with Spout Lane and to S and E with residential properties; not clearly defined to W. Road frontage and access onto Spout Lane only; pedestrian access via Spout Lane only no pavements.	Residential to E and S, unimproved scrubland to W and woodland of Work House Meadows wildlife site to N.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is in countryside for policy purposes so not suitable. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance investigation and management of coal mining history. There is a need for detailed consultation with Coal Authority also required. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this Ancient Woodland. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of 3 Wildlife Sites. Development is subject to an assessment of the impact on these locally designated sites. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a World Heritage Site and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There are a number of mature trees on the site which will require due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance investigation and management of coal mining history. There is a need for detailed consultation with Coal Authority also required. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this Ancient Woodland. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of 3 Wildlife Sites. Development is subject to an assessment of the impact on these locally designated sites. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. BRO015	Land south of Avenue Road	Broseley	1.83	55	0.73	Site comprises part ELR017 - employment land allocation in Broseley. Application 16/02438/REF on adjoining land for mixed residential and employment refused 06/10/2015 then granted on appeal 31/08/2016. Site lies to SE of settlement outside development boundary. Currently in agricultural use with existing farmhouse and farm buildings (The Dunge Farm) on site. Boundaries to W with Avenue Rd; to S, N and E with agricultural land defined by hedgerows and trees and N (part) with properties on Pound lane. Road frontage and access onto Avenue Rd. Overhead electricity and pylon present on site	Agricultural to S and E residential to N and W.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance advice will be needed regarding electricity pylons on the site. Investigation and management of coal mining history will be required. The site is in the Coal Authority High Risk Area and this body will need to be consulted. The site is within 300m of a Conservation Area and several Listed Buildings. Development is therefore subject to an assessment of impact on the significance of the settings of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site contains and is within proximity of one or more TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Hedgerows and mature trees that are not subject to TPO protection will also require consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. BRO011	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify whether the site is available for this form of development and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; viable and achievable. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is within a Conservation Area and proximity of an ancient woodland and SSSI. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The sites availability, viability and achievability are unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, due to the sites location, it is only currently suitable for employment development which is considered to be small scale rural enterprise and diversification schemes, although the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is in a conservation area and proximity of an ancient woodland and SSSI. If suitable mitigation of this identified constraint were possible, the sites development potential for other forms of employment development would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; suitable management of other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BRO012	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. BRO020	Land north of Avenue Road, Broseley	Broseley	0.22	7	0.09	House and large garden site on E edge of settlement within development boundary and conservation area. Several mature trees on site. Boundaries clearly defined with neighbouring residential properties. Road access and frontage onto track off Avenue Rd; pedestrian access via existing links on Avenue Rd.	Established residential area - some large detached dwellings with large gardens, some estate development (Bright Grove). Opposite BRO0015 and site with pp for mixed use development.	Currently Suitable - Subject to Further Detailed Assessment	Site is suitable for residential development subject to management of any physical, heritage and environmental constraints present. The suitability of the access to the site is subject to highway approval. The site is located within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site contains and is within proximity of one or more TPO's, this may well limit the developable area of the site and means that development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Consultation with the coal authority may also be required.	Currently Suitable - Subject to Further Detailed Assessment	Site is suitable for employment development subject to management of any physical, heritage and environmental constraints present. The suitability of the access to the site is subject to highway approval. The site is located within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Consultation with the coal authority may also be required. The site is in proximity of residential dwellings which will require appropriate buffering and may affect the type of employment uses appropriate on the site.
BRO021	Land at Coneybury Farm, Broseley	Broseley	6.94	208	2.77	Greenfield site outside but adjacent to development boundary. Currently in agricultural use for grazing/fodder crops. Site is bounded by residential estate development to S; Ironbridge Rd and residential properties to W; Coneybury Farm complex and farmland to N and E. Boundaries are clearly defined with residential properties and area mixture of trees hedgerows and fences with neighbouring agricultural land. Some of the boundaries contain mature trees and stretches of established hedgerow. Site has no road frontage or access to current highway network, site is accessed via Coneybury Farm. Promoter claims access from Coalport Close development which appears to be in other private ownership as driveway to 2 properties, nevertheless this access would appear unsuitable for size of site proposed. Pedestrian and cycle access could be via Coalport Close or Ironbridge Rd to existing established network.	Mixture of agricultural and residential	Not Suitable	Site is in countryside for policy purposes so not suitable. Furthermore the site appears to be landlocked and therefore there is no confidence that an appropriate access can be provided. The site is also within 300m of Ironbridge World Heritage Site, a conservation area and Grade 2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within 500m of an Ancient Woodland site, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also within 250m of a Wildlife Site, so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Suitable	Site is in countryside for policy purposes, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site appears to be landlocked and therefore there is no confidence that an appropriate access can be provided. The site is also within 300m of Ironbridge World Heritage Site, a conservation area and Grade 2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within 500m of an Ancient Woodland site, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also within 250m of a Wildlife Site, so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
BRO022	Land north of Broseley Lodge, Broseley	Broseley	10.76	323	4.30	Wooded area to the south west of Broseley.	Residential to the north. Wooded to the south. Agricultural to the east and west.	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. The site is densely wooded and forms part of a wider wooded area. It is unlikely that the removal of these trees would be deemed appropriate. The site is also adjacent to a listed building and in proximity of others and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The site is located outside the development boundary within the open countryside. Site is in countryside for policy purposes, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is densely wooded and forms part of a wider wooded area. It is unlikely that the removal of these trees would be deemed appropriate. The site is also adjacent to a listed building and in proximity of others and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
BRO024	Land off Barratts Hill, Broseley	Broseley	0.19	6	0.08	Irregular shaped parcel on Western edge of settlement outside but adjacent to development boundary. Currently informal amenity land with mature trees. Existing residential properties to N and E further agricultural land to S and W. Obvious boundaries with residential properties to N and E; boundaries with agricultural land less well defined. Road access and frontage onto Barratt's Hill (B4375) pedestrian access via existing pavements on Barratts Hill. Within Conservation Area and in close proximity to Penns Meadow Local Wildlife site.	Agricultural land to W and S residential to E and N.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the relationship between any new dwellings on the site and existing buildings would need to be considered. Detailed consultation with the Coal Authority would be required. The site is within 250m of a Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is located within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance due to proximity to existing buildings it is likely that only office based employment would be appropriate on the site and appropriate buffers would be necessary. Detailed consultation with the Coal Authority would be required. The site is within 250m of a Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is located within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. BRO020	Availability Unknown	Previous SHLAA site. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Previous SHLAA site. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. The site is considered suitable for residential development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically its location within the conservation area; the large number of trees subject to TPO protection on the site; and proximity to listed buildings on Church St. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on confirmation of its availability; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is considered suitable for employment development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically its location within the conservation area; the large number of trees subject to TPO protection on the site; and proximity to listed buildings on Church St. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BRO021	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable subject to any further necessary viability assessments. However, it is understood that this site is not available for development. Furthermore the site is not suitable for development as it is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Additionally, the site is densely wooded and forms part of a wider wooded area. It is unlikely that the removal of these trees would be deemed appropriate.	Rejected	The site is considered achievable and viable subject to any further necessary viability assessments. However, it is understood that this site is not available for development. Furthermore the site is not suitable for development as it is located outside the development boundary and is densely wooded and forms part of a wider wooded area. It is unlikely that the removal of these trees would be deemed appropriate.
BRO024	Currently Available	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but it is understood that there remains development interest; the site is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been the subject of either a refused or withdrawn Planning Application for an alternative use and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability	Greenfield site adjacent to development boundary - assumed to be viable for employment use pending further detail and investigation. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically proximity of Penn's meadow Wildlife Site and within Conservation Area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, due to the sites location, it is only currently suitable for employment development which is considered to be small scale rural enterprise and diversification schemes, although the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically proximity of Penn's meadow Wildlife Site and within Conservation Area. If suitable mitigation of this identified constraint were possible, the sites development potential for other forms of employment development would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; suitable management of other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

BRO026	Land off Cockshutt Lane, Broseley	Broseley	2.31	69	0.92	Site on N edge of settlement to N of existing employment area (former WH Dixon site). Site is bounded by B2 use to E; agricultural to N and E; woodland (the 'Stocking Mound') to W and S. Boundaries clear and defensible to W with neighbouring employment use; to N, W and S not readily discernible. Site is currently mixed use with some former industrial land used for storage and/or informal waste management; to N is trees/scrub whilst N portion of site is managed grazing with residential property and garden. Site is outside development boundary and conservation area. No road frontage but site could be accessed through BRO002 or via lane to New House.	Agriculture to N, industry to E and ; woodland to W on reclaimed ground.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Part of the site is within the development boundary and part is in countryside for policy purposes so the site as a whole is not currently suitable. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance investigation and management may be required in relation to the adjacent spoil heaps. Detailed consultation with the Coal Authority would be required. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this Ancient Woodland. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Area. Development is therefore subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Mature trees on the site will require due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Part of the site is within the development boundary and part is in countryside for policy purposes, so with regard to the site as a whole, suitability is currently limited to small scale rural enterprise and diversification schemes. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance investigation and management may be required in relation to the adjacent spoil heaps. Detailed consultation with the Coal Authority would be required. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this Ancient Woodland. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Area. Development is therefore subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Mature trees on the site will require due consideration.
BRO027	Land at Firey Fields, Broseley	Broseley	1.26	38	0.50	part superseded by BRO037. Site on outside development boundary on SW edge of settlement currently in agricultural use - rough grazing. Residential estate to E off Bridgnorth Rd; agricultural uses to N, W, and S. Site is adjacent to Fiery Fields Local Wildlife site. Boundaries well defined with neighbouring residential property to E and agriculture and woodland to S and W; not well defined to N. No road frontage, access would have to be via other adjacent sites footpath links through residential estate and via PROW to W and S. Site relatively flat slight upward slope from W to E. High voltage overhead cables across N extremity of site and 33kv wooden posts and cables across centre of site running NW to Se.	Residential estate to E off Bridgnorth Rd; agricultural uses to N, W, and S	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore the site is not suitable for residential use due to the lack of a road frontage or obvious access point. The site could have long term potential as part of a wider development with access provided through an adjacent promoted site, subject to management of any physical, heritage and environmental constraints. For instance the site is within 300m of a Conservation Area and several Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site is not suitable for employment use due to the lack of a road frontage or obvious access point. The site could have long term potential as part of a wider development with access provided through an adjacent promoted site, subject to management of any physical, heritage and environmental constraints. For instance the site is within 300m of a Conservation Area and several Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BRO028X	The Pheasant Inn, 56 Church Street	Broseley	0.10	N/A	N/A						
BRO029	Land south west of Mill Lane, Broseley	Broseley	2.27	68	0.91	Site lies on W edge of Broseley outside but directly adjacent in part to the development boundary and conservation area. The site consists of part of an agricultural field and an area with a high concentration of trees. There is a farm building located on the site.	Site to the east recently gained planning permission for 6 dwellings. To the east and north the character is predominantly residential. To the south and west the character is predominantly agricultural and countryside character.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. Discussion will be needed with the Coal Authority. A small part of the site is within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. Discussion will be needed with the Coal Authority. A small part of the site is within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BRO030	Land adjacent Woodlands Close, Broseley	Broseley	0.66	20	0.27	Greenfield site outside but adjacent to development boundary currently in agricultural use as rough grazing/pasture. Site is bounded by estate development of Woodlands Close to W; Woodlands farmhouse and farmland to S; further farmland to N and E. Boundaries clearly defined with residential properties on Woodlands Close and to S with Woodlands farmhouse but boundaries to E and N appear arbitrary across farmland. Site has no road frontage as such but can be accessed via existing 'hammerhead' on Woodlands Close; pedestrian and cycle access via same access to existing established network.	Agriculture and residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. There is a need to consider the sites boundaries. The site is within 500m of an Ancient Woodland site, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of a Wildlife Site, so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a World Heritage Site and conservation areas, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary as such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. There is a need to consider the sites boundaries. The site is within 500m of an Ancient Woodland site, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of a Wildlife Site, so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a World Heritage Site and conservation areas, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

BRO026	Availability Unknown	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but it is understood that there remains development interest; the site is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but it is not clear from this application that the site is available for development and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Other employment areas exist within smaller settlements and in some rural locations and these will support additional demand and provision. Outside of these areas, there is a traditional dependence on agriculture and related sectors, therefore the formation of new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, achievable and viable (subject to any further necessary viability assessment). However the site as a whole is not currently suitable for residential development as approximately half is located in open countryside and consequently open market residential development is contrary to policy. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore, the site as a whole is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of its availability, achievability and viability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BRO027	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. BRO031	West of Bridge Road, Broseley	Broseley	2.82	84	1.13	Greenfield site outside but adjacent to Broseley development boundary. Site currently in use for rough grazing and informal recreation. A portion of site previously subject to mineral extraction and now 'unknown filled ground'. Site is bounded by Bridge Rd and Hilltop private property to W; by Floyer Lane and the Bentlands estate development and further agricultural land to E; to N by individual properties; to S by Benthall Lane and individual properties. Boundaries are clearly defined on the ground by a mixture of trees, hedgerows and fencing. Site has road frontage to Bridge Rd, Floyer Lane and Benthall Lane vehicle access currently off Bridge Rd. Cycle and pedestrian access via same routes.	Mixed agricultural and residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the topography of the site will require careful consideration. The site is located within the gap between Broseley and Benthall, this will require careful consideration. Discussion will be needed with environmental agencies, and Coal Authority regarding land conditions. Investigation and management will be required in relation to the areas subject to former mining activities. The site is within 500m of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of 2 Local Wildlife Sites, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 30m of TPO Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is located within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within 300m of Grade 2 listed buildings so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the topography of the site will require careful consideration. The site is located within the gap between Broseley and Benthall, this will require careful consideration. Discussion will be needed with environmental agencies, and Coal Authority regarding land conditions. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Appropriate buffers of adjacent development required.
BRO032	West of Floyer Lane, Broseley	Broseley	2.36	71	0.94	Greenfield site outside and removed from Broseley development boundary. Site currently in use for rough grazing and informal recreation. Site is bounded mostly by agricultural land with small boundary with Bentlands estate development on S corner; and top E with Hilltop Cottage and Floyer Hall. Boundaries clearly defined by established hedgerows and mature trees. In N corner of site remains of redundant farm buildings or possible mining related buildings. Site does not have a road frontage or apparent vehicle access - Floyer Lane is unsuitable for vehicles past Floyer Hall.	Mostly agricultural with some residential development	Not Suitable	The site is separated from the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore the site does not appear to have a road frontage or obvious point for vehicular access. The site may however have long term potential as part of a wider development with access provided through an adjacent site, subject to management of any physical, heritage and environmental constraints. For instance the suitability of any access to and into the site would be subject to highway approval. The site is located within the gap between Broseley and Benthall and projects into the countryside, this will require careful consideration. Consultation with the Environment Agency and Coal Authority will be required regarding land conditions. The site is within 500m of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Site is within 250m of 2 Local Wildlife Sites, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Part of the site is also located within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

BRO031	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically part of the site is within a Conservation Area and has a complex topography. The site is also located within the gap between Broseley and Benthall which requires careful consideration. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include investigation and management of former mining activities; and proximity to heritage and environmental assets. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically part of the site is within a Conservation Area and has a complex topography. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; ; confirmation of the sites availability, achievability and viability; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include investigation and management of former mining activities; and proximity to heritage and environmental assets. The site is also located within the gap between Broseley and Benthall which requires careful consideration. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

BRO034	Adj. Brook Cottage, 4 Bridge Rd, Broseley	Broseley	0.21	6	0.08	Small greenfield site within development boundary. Currently in use as garden land (so; ancillary residential) of Brook Cottage. Site includes numerous mature trees internally and forming boundaries with adjoining properties. Site is surrounded by residential properties and has road frontage and vehicle access to Bridge St to W.	Gardens and residential properties	Currently Suitable - Subject to Further Detailed Assessment	Within development boundary so site suitable for development. Discussion will be needed with highway authority about vehicle access and Coal Authority regarding land conditions. The site is within 500m of an Ancient Woodland site. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of 3 Local Wildlife Sites, so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 30m of a Veteran Tree/ tree protected by a Tree Preservation Order so development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is located within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within proximity of a World Heritage Site and a number of listed buildings so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	Within development boundary so site suitable for development. The employment uses would need to complement surrounding uses, they are therefore likely to be limited to office based employment. Discussion will be needed with highway authority about vehicle access and Coal Authority regarding land conditions. Site is within 500m of ancient woodland so development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of an Ancient Woodland site. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within 500m of WHS so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BRO035X	Land off Chapel Lane, Broseley	Broseley	0.11	N/A	N/A						
BRO036	Land off Avenue Road, Broseley	Broseley	6.82	205	2.73	Large greenfield site outside but adjacent to development boundary. Site currently in agricultural use for arable/fodder crops and grazing. Site has road frontage and vehicle access off Avenue Rd on NW boundary of site and to Pound La/Caughley Rd on SW boundary. Pedestrian and cycle access via Avenue Rd or Spout Lane to existing established network. Boundaries of site are clearly defined by mature trees and established hedgerows except on SE boundary which appears to be arbitrary line across existing fields. Site is crossed by 5 set of overhead power lines with at least 2 sets of 400kv lines.	Agricultural and residential. Site is bounded to W and S by agricultural land. To the N planning permission has been granted for a mixed residential and employment development. To the E is an existing residential estate development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance discussion will be needed with highway authority about vehicle access and environmental agencies, and Coal Authority regarding land conditions. Overhead power lines will require due consideration. The site is within 300m of conservation area and Grade 2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance discussion will be needed with highway authority about vehicle access and environmental agencies, and Coal Authority regarding land conditions. Overhead power lines will require due consideration. The site is within 300m of conservation area and Grade 2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BRO037	Land west of Bridgnorth Road, Broseley	Broseley	1.02	31	0.41	Greenfield site outside but adjacent to development boundary on SW edge of town. Current use of site is not clear maybe used for rough grazing and informal recreation. Site is bounded by residential development to N, S and E and further agricultural land to W. Site boundaries are clearly defined by adjacent residential properties to N, S, and E; however W boundary appears to be arbitrary line across field with no discernible definition. Site is bisected by 2 sets overhead power lines 1 of 400kv and also contains many established trees. Site does not have road frontage and vehicle access is via track on N boundary to Bridgnorth Rd pedestrian and cycle access via same.	Residential and agricultural	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance discussion and management of overhead power lines on the site is required. The ability to provide a satisfactory highway access is subject to highway approval. Discussion will be needed with the Coal Authority regarding land conditions. Appropriate investigation and management of ground conditions will be required. The site is within 250m of a Local Wildlife Site - Fiery Fields, so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of conservation area and listed buildings so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary as such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance discussion and management of overhead power lines on the site is required. The ability to provide a satisfactory highway access is subject to highway approval. Discussion will be needed with the Coal Authority regarding land conditions. Appropriate investigation and management of ground conditions will be required. The site is within 250m of a Local Wildlife Site - Fiery Fields, so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of conservation area and listed buildings so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity of residential dwellings, therefore appropriate buffering will be required.
BRO038	Adjacent to the Cemetery, Broseley	Broseley	0.33	10	0.13	Greenfield site outside but adjacent to development boundary. Currently in agricultural use for rough grazing. Site is bounded by cemetery to N and W and by residential land and Ironbridge Rd to E and Mines Meadow estate development to S. Boundaries are clearly defined on ground by established trees and hedgerows. Road frontage and vehicle access to Ironbridge Rd; pedestrian and cycle access via same.	Residential, agricultural and cemetery	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance discussion will be needed with the highway authority about vehicular access. The site within 250m of Haycorp Local Wildlife Site, so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 30m of veteran tree/TPO so development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Site is within 300m of conservation area and listed buildings so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary as such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance discussion will be needed with the highway authority about vehicular access. The site within 250m of Haycorp Local Wildlife Site, so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 30m of veteran tree/TPO so development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Site is within 300m of conservation area and listed buildings so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Proximity to the cemetery will mean the mix of uses, layout and buffering will need to complement this use. Proximity to the cemetery will mean any employment use and buffering will need to complement this use.

BRO034	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). The site is also considered suitable for development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically potential impacts on environmental and heritage assets. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is suitable for limited appropriate employment development. Its availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The sites suitability is subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically potential impacts on environmental and heritage assets. The employment uses would need to complement surrounding uses, they are therefore likely to be limited to office based employment. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); the outcome of a visual impact and landscape sensitivity assessment; and confirmation of the sites availability, achievability and viability. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BRO035X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include overhead power lines, ground conditions as a result of previous mining and industrial operations, potential impacts on heritage and environmental assets, traffic impact on local roads and junctions. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include overhead power lines, ground conditions as a result of previous mining and industrial operations, potential impacts on heritage and environmental assets, traffic impact on local roads and junctions. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BRO037	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include overhead power lines, ground conditions, satisfactory access and potential impact on environmental and heritage assets. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include overhead power lines, ground conditions, satisfactory access and potential impact on environmental and heritage assets. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
BRO038	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. BRO039	Land east of Dark Lane, Broseley	Broseley	6.23	187	2.49	Large greenfield site to E of Dark Lane opposite Broseley Primary School outside current development boundary. Currently 3 agricultural fields currently used for hay/silage crops. Access directly onto Dark Lane. Site subdivided by existing established managed hedgerow. Boundaries defined to N and S by existing hedgerows, no clear boundaries at all to E; to W boundary with Dark Lane. Site slopes downward from S to N. Site bounded by Dark Lane, Primary School, and residential estate development to W; by residential properties to N and agricultural land to S and E.	Residential and agricultural	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide a suitable highway access is subject to highway approval. The site is within 250m of Haycorp Local Wildlife Sites so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a World Heritage Site, so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary as such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide a suitable highway access is subject to highway approval. The site is within 250m of Haycorp Local Wildlife Sites so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BRO040	Coalport Road	Broseley	1.47	44	0.59	Green field outside but adjacent to the development boundary on the eastern edge of the settlement, to the south of Coalport road. Currently used for grazing/pasture. The site falls roughly down to the east, with the eastern boundary delineated by a post and rail fence; N, S and W boundaries comprised 'gappy' hedgerows and scattered mature trees. Site is bounded by further farmland to S and W and residential estate development to E and N. Site has road frontage and onto Coalport road but current vehicle access appears to be from Rough Lane (single track, unpaved access track) to S. Cycle and pedestrian access via Coalport Rd and Rough Lane to existing established network.	Agricultural and residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary so is not currently suitable in policy terms. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide a suitable highway access is subject to highway approval. The site is also within 300m of Grade 2 Listed Building so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is adjacent to but outside settlement boundary as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
BRO041	Land at Coalport Road, Broseley	Broseley	3.09	93	1.24	The site consists of two agricultural fields located between Coalport Road and residential properties on Rough Lane.	Surrounding character is predominantly agricultural with a row of dwellings to the north and south of the site.	Not Suitable	The site is located outside and detached from the development boundary by an adjacent agricultural field. Therefore residential development is contrary to policy. Furthermore as the site is separated from the development boundary and built form of the settlement, it does not have long term potential for open market residential development. The site in combination with the adjacent field may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.	Not Suitable	The site is located outside and detached from the development boundary by an adjacent agricultural field. As such employment development is limited to small scale rural enterprise and diversification schemes. As the site is separated from the development boundary and built form of the settlement, in isolation it does not have long term potential for other forms of employment development. However, the site in combination with the adjacent field may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.
SLC002	Land at the Cottage, Calcott Lane, Calcott	Calcott near Shrewsbury	2.54	76	1.02	The site consists of a series of small agricultural fields, a wooded area and a large rural dwelling. Boundaries are primarily hedgerow boundaries.	Residential to the north, agricultural and woodland to south, east and west.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such open market residential development is contrary to policy and it is not considered that this position is likely to change.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes and it is not considered that this position is likely to change.
SLC003	Calcott Lane, Calcott	Calcott near Shrewsbury	0.70	21	0.28	The site consists of one whole and part of a second agricultural field located to the south of Calcott. Boundaries are primarily agricultural field boundary, apart from that which divides the second agricultural field.	Residential to the north-west, agricultural and woodland to north-east, east, south and south-west.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such open market residential development is contrary to policy and it is not considered that this position is likely to change.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes and it is not considered that this position is likely to change.

For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such open market residential development is contrary to policy and it is not considered that this position is likely to change.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes and it is not considered that this position is likely to change.

CST001	Church Stretton Car Sales, Burway Road, Church Stretton	Church Stretton	0.09	5	0.04	Site located within Church Stretton. In use as car repair centre with associated parking to the front. Boundaries comprise Dentist to the west, Burway Road to the north, Crown Carpets to the east and residential to the south.	This is a site within the town centre and the surroundings are entirely urban in character.	Currently Suitable - Subject to Further Detailed Assessment	The site is within the development boundary of the settlement so residential development is acceptable in principle subject to material considerations. development in relation to this matter, subject to acceptable safeguarding. The site is within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is located within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. However, as the site is also within a settlement development boundary it is considered suitable for development in principle. The site is also within proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Furthermore the site is within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. CST003	North of nature reserve on A49, Church Stretton	Church Stretton	3.26	98	1.31	This is a linear site between the A49 and railway line to the north of Coppice Leasowes Local Nature Reserve. It is in agricultural use.	Rural in nature. The Shrewsbury to Hereford rail line forms the western boundary and the A49 the eastern boundary but beyond this, the land is in agricultural use.	Not Suitable	The site is outside the settlement development boundary in an isolated location. Consequently open market residential development on the site would currently be contrary to policy. Additionally, the site is separated from the built form of the settlement; the ability to provide an access unclear - the suitability of any access would be dependent on highway approval. Approximately 1/3 of the site is located within flood zone 2 and/or 3.	Not Suitable	The site is located outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Additionally, the site is separated from the built form of the settlement; the ability to provide an access unclear - the suitability of any access would be dependent on highway approval. Approximately 1/3 of the site is located within flood zone 2 and/or 3.
CST004	South West of the Church Way Business Centre, Church Stretton	Church Stretton	1.14	34	0.46	The site is adjacent to the A49, south of the centre of the town. This is a long thin rectangular site between the road and the railway.	The A49 to the east, railway to the west, residential and the Church Way business centre to the north (including the Continental Fires site) agriculture to the south.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance there is uncertainty as to whether the site has a road frontage. The suitability of vehicular access to the site is subject to highway approval. The site is located within the AONB, therefore major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within proximity of a scheduled monument and conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance there is uncertainty as to whether the site has a road frontage. The suitability of vehicular access to the site is subject to highway approval. The site is located within the AONB, therefore major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. CST001	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered likely to become available; achievable; and viable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. The sites suitability for development is subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically its location within the AONB and a Conservation Area. If no significant adverse impacts on this asset was identified or if suitable mitigation is possible, the site's development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. The site is however considered suitable for development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically its location within a Conservation Area and the AONB. If no significant adverse impacts on this assets was identified or if suitable mitigation is possible, the site's development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
CST002	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). CST005	Land at Brockhurst, Church Stretton	Church Stretton	0.74	22	0.30	This is an irregularly shaped field to the south of the town centre between the railway line and Cross Bank. It lies just to the north of Brockhurst Castle, a Scheduled Monument.	Predominantly agricultural, with some woodland to the north and west, along with residential.	Not Suitable	The site is separated from the development boundary and the built form of the settlement. Consequently, open market residential development on the site is currently contrary to Local Plan policy. Additionally, the current access to the site passes through Flood Zone 3 so the site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere.	Not Suitable	The site is separated from the development boundary and the built form of the settlement. As such employment development is limited to small scale rural enterprise and diversification schemes. Additionally, the current access to the site passes through Flood Zone 3 so the site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere.
CST006	Land at Gaerstones Farm, Sandford Avenue, Church Stretton	Church Stretton	2.10	63	0.84	This site comprises fields in agricultural use (grazing). It lies at the eastern extremity of Church Stretton, off Sandford Avenue as it leaves the town towards Hope Bowdler.	Mainly agricultural with woodland to the north and some residential on the other side of Sandford Avenue (B4371).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the site is located within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is adjacent to a Conservation Area and a Listed Building. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site contains and is within proximity of one or more TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the site is located within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. CST005	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for development and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However, the site is not suitable for development as it is in an isolated location and the access route passes through Flood Zone 3 so the site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site is not suitable for development as it is in an isolated location and the access route passes through Flood Zone 3 so the site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere.
CST006	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site is a broad location and Shropshire Council Officers have been unable to determine whether the site is available for development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. CST010	Land at Rabbit Burrow, Trevor Hill, Church Stretton	Church Stretton	2.66	80	1.06	The site comprises mature woodland in an elevated location. It consists of a small thin section to west of Trevor Hill and a mushroom shaped site to the north. Access to the northern section is via a footpath called Rabbit Burrow which continues out to Cwmdale, one of the steep Long Mynd batch valleys. Only the middle, rectangular part of the site is adjacent to the development boundary.	The site lies on the boundary between existing residential development and the Long Mynd. Land to the north and west has high environmental quality and is used for both formal (golf course) and informal recreation.	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Additionally, much of the site is heavily wooded and all except the southern element of the site is covered by a Group TPO. The site is thus considered unsuitable.	Not Suitable	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Additionally, much of the site is heavily wooded and all except the southern element of the site is covered by a Group TPO. The site is thus considered unsuitable.
CST011	Land off Burway Road, Church Stretton	Church Stretton	1.83	55	0.73	This is a narrow strip of land between the existing houses on Burway Road and Rectory Wood. It is the site comprises rough grassland (formerly grazed by horses) with scattered mature trees.	This is an edge of settlement location. Woodland lies to the south and the Long Mynd to the west with residential to the north and east.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the site is entirely within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is located within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. There are trees protected by TPOs both within the site and in proximity. Development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the site is entirely within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CST012X	Land at the edge of Rectory Field off Burway Road	Church Stretton	0.17	N/A	N/A						
CST013	Land at Tiger Hall, Church Stretton	Church Stretton	3.85	115	1.54	The majority of the site is wooded but the eastern part has some areas of tall rough grassland. The site lies on the slopes of the Long Mynd at some distance from the town centre.	Essentially rural with the Long Mynd and woodland to the west, Rectory Wood to the north and east and isolated residential to the south.	Not Suitable	The site is located outside and distant from the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore, the majority of the site is an identified natural/semi-natural open space. As such it is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site is also separated from the built form of the settlement; has access constraints; is a sloping site; contains an area of Ancient Woodland; has limited vehicular and pedestrian access; is steeply sloping; and is located within a conservation area - the openness of this site is considered to offer a significant contribution to the character of this conservation area.	Not Suitable	The site is located of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the majority of the site is an identified natural/semi-natural open space. As such it is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site is also separated from the built form of the settlement; has access constraints; is a sloping site; contains an area of Ancient Woodland; has limited vehicular and pedestrian access; is steeply sloping; and is located within a conservation area - the openness of this site is considered to offer a significant contribution to the character of this conservation area.
CST014	Land off Cunneery Road, Church Stretton	Church Stretton	0.46	14	0.18	The site feels remote from the town, being accessed via a steeply winding road. The site is a semi-formal landscape, being laid out as a small golf course. It lies within a more natural landscape of steeply wooded slopes and is at the end of a quiet and secluded road.	The surrounding area is almost rural in character despite being semi-continuous with the town. Some housing to the west, Allen Coppice woodland to the south, the Long Mynd Hotel to the east and Cunneery Lane to the north.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside and separated from the settlement development boundary. Consequently it is in the countryside for policy purposes and open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance confirmation of the ability to provide safe access to and into the site. The site is also within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site contains a group TPO and the site boundary is within 30m of two other group TPOs. Development is subject to an assessment of impact on these protected trees in order to demonstrate they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. CST010	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). It is unknown whether the site is available - where necessary, these issues will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. Additionally the site is not considered suitable in the longer term as much of its developable area is heavily wooded and covered by a Group TPO. It is unlikely that it will be possible to develop the site without causing significant adverse effects on these protected trees.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site is not suitable for development as much of its developable area is heavily wooded and covered by a Group TPO. It is unlikely that it will be possible to develop the site without causing significant adverse effects on these protected trees.
CST011	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. Furthermore, the majority of the site is an identified natural/semi-natural open space. As such it is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Additionally the site contains an area of Ancient Woodland; has limited vehicular and pedestrian access; is steeply sloping; and is located within a Conservation Area and the openness of this site is considered to offer a significant contribution to the character of this conservation area.
CST014	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, achievable and viable (subject to any further necessary viability assessment). The associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However the site is not currently suitable for development as although it is within the built form of the settlement it is located in open countryside for policy purposes consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the site's suitability is subject to appropriate assessment and management of any impacts on these. Specifically: location within the Shropshire Hills AONB; location within a Conservation Area; part of a Group TPO within the site boundary; proximity to two other Group TPOs: proximity to a SSSI; proximity to Ancient Woodland and proximity to a Listed Building. If suitable mitigation of these identified constraints were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically; location within the Shropshire Hills AONB; location within a Conservation Area; part of a Group TPO is within the site boundary; proximity to two other Group TPOs: proximity to a SSSI; proximity to Ancient Woodland and proximity to a Listed Building. If suitable mitigation of these identified constraints were possible, the sites development potential for other forms of employment would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.

CST015	Land fronting Ludlow Road, Church Stretton	Church Stretton	0.44	13	0.18	This is a very steeply sloping wooded site with a natural feel.	Residential to the west, south and east and wooded to the north (grounds of the Long Mynd Hotel).	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site is also covered by a group TPO which is contiguous with a much larger group TPO to the north. It is unlikely to be possible to develop the site without causing significant adverse effects on these protected trees and the site is thus considered unsuitable.	Not Suitable	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site is also covered by a group TPO which is contiguous with a much larger group TPO to the north. It is unlikely to be possible to develop the site without causing significant adverse effects on these protected trees and the site is thus considered unsuitable.
CST016X	Adj. Ringing Stones, Cunneery Road	Church Stretton	0.14	N/A	N/A						
CST017	The Fire Station, BT Building and Police Station, Sandford Avenue, Church Stretton	Church Stretton	0.26	8	0.11	This site houses the police and fire stations. It is urban in character.	Urban in nature with shops and houses. The site fronts one of the main streets in the town.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary so would be suitable subject to a potential restriction of developable area as around 40% of the site is in Flood Zones 2 and/or 3. The area of the site subject to this flood risk is not suitable as it will only be considered to have development potential if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere. The following other material consideration will also need to be taken into account: part of the site is also within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of the AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. However, as the site is also within a settlement development boundary it is considered suitable for development in principle. The site boundary is within 30m of a Group TPO. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity of several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary so would be suitable subject to a potential restriction of developable area as around 40% of the site is in Flood Zones 2 and/or 3. The area of the site subject to this flood risk is not suitable as it will only be considered to have development potential if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity of several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CST018	Land adj. Railway at World's End, Church Stretton	Church Stretton	13.83	415	5.53	This is a large site in low intensive agricultural use containing some workshops at the south-eastern corner. It is low lying and prone to flooding.	Land to the north is in residential use and urban in character. To the east the site is bordered by the Crewe to Hereford railway line. A cemetery lies to the south whilst the land rises steeply in the east to form the knoll with Brockhurst Castle on it.	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The element of the site most associated with the existing built form of the settlement is located within flood zones 2 and/or 3 (approximately 50% of the site). Additionally, the access to the site is located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the flood risk can be mitigated; and it will not increase flood risk elsewhere.	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the element of the site most associated with the existing built form of the settlement is located within flood zones 2 and/or 3 (approximately 50% of the site). Additionally, the access to the site is located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the flood risk can be mitigated; and it will not increase flood risk elsewhere.
CST020	Land NW of Gaerstone Farm, Church Stretton	Church Stretton	4.02	121	1.61	This is mostly agricultural land with a linear area of established woodland along the Sandford Avenue boundary. Despite the presence of housing on the opposite side of Sandford Avenue, the site feels remote from the town centre and owes most of its character to the adjacent woodland and open slopes on Helmeth Hill.	The site is on the eastern edge of Church Stretton and lies some distance from the town centre. The surrounding area is essentially rural in character with Helmeth Wood to the north, agricultural land to the east, Sandford Avenue to the south and The Leasowes house to the west.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the site is located within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site contains trees protected by a TPO and there are other TPOs adjacent to the site in the north and west. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of an Ancient Woodland site. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Part of the site is within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within 300m of a Listed Building. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the site is located within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site contains trees protected by a Tree Preservation Order and there are other TPOs adjacent to the site in the north and west. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of an Ancient Woodland site. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Part of the site is within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within 300m of a Listed Building. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. CST015	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown. Where necessary, this will be informed by further discussions with landowners and their representatives. Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. Additionally, the site is entirely covered by a Group TPO which is contiguous with a much larger Group TPO to the north. It is unlikely to be possible to develop the site without causing significant adverse effects on these protected trees and the site is thus considered unsuitable.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not suitable for development as it is entirely covered by a Group TPO which is contiguous with a much larger Group TPO to the north. It is unlikely to be possible to develop the site without causing significant adverse effects on these protected trees and the site is thus considered unsuitable.
CST016X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
CST017	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site was promoted during the SAMDev process. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown. Where necessary, this will be informed by further discussions with landowners and their representatives. Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. Additionally the site is not currently suitable for development as the only access as well as approximately 50% of this site is located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the flood risk can be mitigated; and it will not increase flood risk elsewhere.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not suitable for development as the only access as well as approximately 50% of this site is located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the flood risk can be mitigated; and it will not increase flood risk elsewhere.
CST020	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site is a broad location and Shropshire Council Officers have been unable to determine whether the site is available for development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CST023	Bank House Land, Longhills Road, Church Stretton	Church Stretton	0.37	11	0.15	The site comprises the well wooded garden of The Bank House.	The site is within the development boundary and the surrounding character is residential in nature. The War Memorial is on land to the west.	Not Suitable	The site is within the Church Stretton development boundary so the principle of development is accepted subject to material considerations. However, the whole of the site is covered by a Group TPO and it is unlikely to be possible to develop the site without causing significant adverse effects on these protected trees and the site is thus considered unsuitable.	Not Suitable	The site is within the Church Stretton development boundary so the principle of development is accepted subject to material considerations. However, the whole of the site is covered by a Group TPO and it is unlikely to be possible to develop the site without causing significant adverse effects on these protected trees and the site is thus considered unsuitable.
CST026	Land at Trefnant, Church Stretton	Church Stretton	0.70	21	0.28	This is a well wooded site which forms part of the garden to Trefnant.	The site is adjacent to Rectory Wood and Field, a Shropshire Council outdoor recreation site. Land to the east and south is in residential use whilst the car park for Rectory Wood and Field lies to the west.	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Additionally the site is not suitable for development as it is entirely covered by a Group TPO and is heavily wooded along Cunneery Road, restricting the ability to access the site - it is unlikely to be possible to develop the site without causing significant adverse effects on these protected trees. Furthermore, the majority of the site is an identified natural/semi-natural open space. As such it is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.	Not Suitable	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site is not suitable for development as it is entirely covered by a Group TPO and is heavily wooded along Cunneery Road, restricting the ability to access the site - it is unlikely to be possible to develop the site without causing significant adverse effects on these protected trees. Furthermore, the majority of the site is an identified natural/semi-natural open space. As such it is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.
CST027	Sandford Avenue, Church Stretton	Church Stretton	0.37	11	0.15	The site forms part of a larger field used for sheep grazing. Although it is adjacent to the development boundary (which runs along Sandford Avenue), it is separated from the built form of the settlement by the remainder of the field. It also lies some distance from the centre of Church Stretton and its character owes more to the surrounding countryside than to the town itself.	Land immediately to the east is in agricultural use, although The Leasowes property lies beyond this, adjacent to the larger field's boundary. Land to the north and west is in agricultural (grazing) use whilst Sandford Avenue along the southern boundary of the site separates it from existing residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site is located within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. Part of the site is covered by a Group TPO. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in a Conservation Area, therefore development is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within 300m of a Listed Building. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site is located within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. Part of the site is covered by a Group TPO. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in a Conservation Area, therefore development is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within 300m of a Listed Building. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

CST021	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify this matter. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include: location within the Shropshire Hills AONB; proximity to Ancient Woodland; proximity to a Wildlife Site; proximity to a Group TPO and proximity to a Conservation Area.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the its availability, achievability and viability; appropriate changes to policies affecting this location and the suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include: location within the Shropshire Hills AONB; proximity to Ancient Woodland; proximity to a Wildlife Site; proximity to a Group TPO and proximity to a Conservation Area.
CST023	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. CST028	Land at New House Farm, Church Stretton	Church Stretton	4.31	129	1.72	The main part of the site comprises a large open field running up the slope towards Helmeth Hill. It is in agricultural use.	Land to the west, north and east is in agricultural use whilst the Battlefield housing estate lie to the south.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside the development boundary. Consequently, open market residential development on the site is currently contrary to Local Plan policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate vehicular, pedestrian and cyclist access to and into the site is subject to highway approval. The site is located within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. A small part of the site is also subject to a Group Tree Preservation Order. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Area and two Grade II Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CST029	Land between Clive Avenue and Kenyon Road, Church Stretton	Church Stretton	0.95	28	0.38	The site comprises a field in agricultural use (grazing) on the edge of Church Stretton. It lies on the slopes of Ragleth Hill and is rural in character.	The site lies towards the western end of Clive Avenue and has residential development to the north. However, the woodland to the west and east and open hillslope to the south give the surrounding area a countryside character.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate vehicular, pedestrian and cyclist access to and into the site is subject to highway approval. The site is in the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. It also contains trees protected by a Tree Preservation Order (TPO) and is within 30m of other woodlands subject to TPO. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site also contains a small part of a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate vehicular, pedestrian and cyclist access to and into the site is subject to highway approval. The site is in the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. It also contains trees protected by a Tree Preservation Order (TPO) and is within 30m of other woodlands subject to TPO. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site also contains a small part of a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.
CST030	New House Farm, Church Stretton	Church Stretton	7.42	223	2.97	Site comprises two fields (northern and southern) linked by a track. It is mostly agricultural in character (used for grazing) and forms part of countryside to the north of Church Stretton and east of the A49. Part of the northern field is used by the Longmynd Archery Club.	Although the A49 runs to the west of the site, the surrounding character is rural in nature being largely in agricultural use. A fishing lake lies to the west of the southern part of the site.	Not Suitable	The site is not suitable for residential development as it is detached from the built form of the settlement. It is outside and detached from the development boundary. Open market residential development is therefore contrary to policy. However, there are a number of other sites promoted to the south of this site (some of which are in the same ownership), a comprehensive development in this location would mean that this site would have a greater relation with the settlement and could therefore have long term potential - although given the location of this site and its prominence on the A49, the likelihood is that employment uses would be more appropriate as part of any mix of uses within a wider development, as its location could allow for appropriate buffering. Any development would also need to address any physical, heritage and environmental constraints present, for instance the site is within the Shropshire Hills AONB, therefore major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located outside and detached from the built form of the settlement. As such employment development is limited to small scale rural enterprise and diversification schemes. Whilst the site in isolation is not considered suitable for other forms of employment development, there are a number of other sites promoted to the south of this site, between it and the built form of the settlement (some of which are in the same ownership), and a comprehensive development in this location would result in this site having a greater relation to the built form of the settlement and would therefore have long term potential - although given the location of this site and its prominence on the A49, the likelihood is that employment uses would be most appropriate as part of any mix of uses within a wider development, as its location could allow for appropriate buffering. Any development would also need to address any physical, heritage and environmental constraints present, for instance the site is within the Shropshire Hills AONB, therefore major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
CST030A	New House Farm, Church Stretton	Church Stretton	3.51	105	1.40	Site comprises an field mostly used for agricultural purposes (grazing), however part of the northern field is used by the Longmynd Archery Club. The site forms part of countryside to the north of Church Stretton and east of the A49.	Surrounding character is primarily agricultural/rural.	Not Suitable	The site is not suitable for residential development as it is detached from the built form of the settlement. It is outside and detached from the development boundary, open market residential development is therefore contrary to policy. Furthermore, approximately 10% of the site is identified as an outdoor sports facility. As such this element of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. However, there are a number of other sites promoted to the south of this site (some of which are in the same ownership), a comprehensive development in this location would mean that this site would have a greater relation with the settlement and could therefore have long term potential (excluding the area identified as public open space) - although given the location of this site and its prominence on the A49, the likelihood is that employment uses would be more appropriate as part of any mix of uses within a wider development, as its location could allow for appropriate buffering. Any development would also need to address any physical, heritage and environmental constraints present, for instance the site is within the Shropshire Hills AONB, therefore major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located outside and detached from the built form of the settlement. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, approximately 10% of the site is identified as an outdoor sports facility. As such this element of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Whilst the remainder of the site in isolation is not considered suitable for other forms of employment development, there are a number of other sites promoted to the south of this site, between it and the built form of the settlement (some of which are in the same ownership), and a comprehensive development in this location would result in this site having a greater relation to the built form of the settlement and would therefore have long term potential - although given the location of this site and its prominence on the A49, the likelihood is that employment uses would be most appropriate as part of any mix of uses within a wider development, as its location could allow for appropriate buffering. Any development would also need to address any physical, heritage and environmental constraints present, for instance the site is within the Shropshire Hills AONB, therefore major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. CST028	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include: location within the Shropshire Hills AONB; part of the site is subject to a TPO; proximity of the site to Ancient Woodland, a Wildlife Site, a Conservation Area and two Grade II Listed Buildings. Additionally, suitable pedestrian access would need to be provided.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the its availability, achievability and viability; appropriate changes to policies affecting this location and the suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include: location within the Shropshire Hills AONB; part of the site is subject to a TPO; proximity of the site to Ancient Woodland, a Wildlife Site, a Conservation Area and two Grade II Listed Buildings. Additionally, suitable pedestrian access would need to be provided.
CST029	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. CST031	South of Clive Avenue, Church Stretton	Church Stretton	0.45	14	0.18	Site comprises agricultural land on the lower flanks of Ragleth Hill and the south-eastern edge of Church Stretton.	Land to the north and west is in residential use whilst land to the west and south is in agricultural use.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is in the Shropshire Hills AONB. The site is located within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. However, as the site is also within a settlement development boundary it is considered suitable for development in principle. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. A small part of the site is within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is located within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. However, as the site is also within a settlement development boundary it is considered suitable for development in principle. The site is within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. A small part of the site is within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.
CST032	Watling Street North (northern field), Church Stretton	Church Stretton	2.97	89	1.19	This is the most northerly of a series of three fields in agricultural use that lie to the north of Church Stretton, adjacent to but east of the A49. The site occupies a prominent knoll which screens land to the east from the A49.	Mostly agricultural land (in grazing use) although an isolated property, High Leyes, lies to the north.	Not Suitable	The site is not suitable for development as it is located in the countryside outside the development boundary and some distance from the built form of Church Stretton. Consequently, open market residential development on the site is contrary to local Pan policy. Additionally, the ability to provide an appropriate vehicular access, which would be off the A49, is subject to highway approval. However, there are two other sites in the same ownership adjacent to this site which both have a frontage to Cwms Lane. Combining all three sites may provide a more comprehensive development capable of resolving current access constraints (subject to Highways comments) and locational constraints. Any development would also need to address any physical, heritage and environmental constraints present, for instance the site is within the Shropshire Hills AONB, therefore major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of a wildlife site and LNR, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a conservation area and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located in the countryside outside the development boundary and some distance from the built form of Church Stretton. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is not suitable for other forms of employment development as it is located some distance from the built form of the settlement. Furthermore, the ability to provide an appropriate vehicular access, which would be off the A49, would be subject to highway approval. There are two other sites in the same ownership adjacent to this site which both have a frontage to Cwms Lane. Combining all three sites may provide a more comprehensive development capable of resolving current access constraints (subject to Highways comments) and locational constraints. Any development would also need to address any physical, heritage and environmental constraints present, for instance the site is within the Shropshire Hills AONB, therefore major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of a wildlife site and LNR, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a conservation area and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
CST033	Watling Street North (eastern field), Church Stretton	Church Stretton	1.90	57	0.76	This is the eastern of a series of three fields in agricultural use that lie to the north of Church Stretton, adjacent to but east of the A49. The site occupies a prominent knoll which screens land to the east from the A49.	Mostly agricultural land (in grazing use). Although not adjacent to the site boundary, the Battlefield housing estate lies to the south-east.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, close to but outside the development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 30m of a tree subject to a Tree Preservation Order (TPO). Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Area. Development is subject to an assessment of impact on the significance of the setting of this heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, close to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is within the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 30m of a tree subject to a Tree Preservation Order (TPO). Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Area. Development is subject to an assessment of impact on the significance of the setting of this heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CST034	Watling Street North (southern field), Church Stretton	Church Stretton	1.75	53	0.70	This is the southern of a series of three fields in agricultural use that lie to the north of Church Stretton, adjacent to but east of the A49. The site occupies a prominent knoll which screens land to the east from the A49.	Agricultural land (grazing) to the west, north and east and the Watling Street North affordable housing exception site to the south.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is in the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. However, as the site is also within a settlement development boundary it is considered suitable for development in principle. The site is within 250m of a Wildlife Site and within 100m of a LNR. Development is subject to an assessment of the impact on these locally designated sites. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Area. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. CST031	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically: location within the Shropshire Hills AONB; location within a Conservation Area; proximity to Ancient Woodland and to a Wildlife Site. If assessments showed that suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and the outcome of assessments of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include: location within the Shropshire Hills AONB; location within a Conservation Area; proximity to Ancient Woodland and to a Wildlife Site.
CST032	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. CST035	Springbank Farm, Church Stretton	Church Stretton	1.83	55	0.73	Site comprises a farm complex with a touring campsite in the southern part. It is essentially rural in character and is separated from the Ashbrook affordable housing exception site by the remainder of the campsite.	Church Stretton School and associated sporting facilities are to the west, land in agricultural use to the north and east and a campsite to the south. The site is on the edge of Church Stretton but not adjacent to the development boundary. Land to the northwest, east and south is included in an undetermined planning application for 47 houses.	Not Suitable	The site is located outside the development boundary, although there is an undetermined planning application for housing on the land between this site and the development boundary; land to the south is identified as compensatory provision for loss of open space on an allocated site; and the site is adjacent to an existing employment allocation. Consequently, open market residential development on the site is currently contrary to Local Plan policy. Additionally, the access route to the site runs through Flood Zone 3 (and part of the site is located in flood zone 2) so the site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere.	Not Suitable	The site is located outside the development boundary, although there is an undetermined planning application for housing on the land between this site and the development boundary; land to the south is identified as compensatory provision for loss of open space on an allocated site; and the site is adjacent to an existing employment allocation. As such employment development is limited to small scale rural enterprise and diversification schemes. CST036	225 Watling Street South, Church Stretton	Church Stretton	0.35	11	0.14	Site comprises house and surrounding large garden with mature orchard trees. It lies on the southern edge of the town, adjacent to both CST031 and the development boundary. The A49 runs along the site's western edge and a track leads from the site to both this and Clive Avenue.	Land to the south and east is in agricultural use and supports some woodland. The south eastern edge of the town lies to the north and there is a belt of woodland separating the site from the A49 to the west.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is in the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 500m of Ancient Woodland. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Finally, the site is adjacent to a Conservation Area. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is in the Shropshire Hills AONB. Major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Finally, the site is adjacent to a Conservation Area. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CST037	Cemetery Road, Church Stretton	Church Stretton	0.91	27	0.37	Site is located to the southwest of town centre, adjacent and east of the road leading to the cemetery. It contains an area of hardstanding and two partly open sided sheds. It is rural in character and separated from edge of the built form of the town by land in agricultural use.	The surrounding land is in agricultural use (grazing) although the track running along the western boundary of the site leads to the town cemetery and some allotments. Site CST018 is adjacent to the northwest.	Not Suitable	The site is detached from the built form of the development and some distance from the development boundary. Consequently open market residential development on the site would currently be contrary to policy. Additionally the only vehicular access route passes through Flood Zones 2 and/or 3 so the site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere.	Not Suitable	The site is detached from the built form of the development and some distance from the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the only vehicular access route passes through Flood Zones 2 and/or 3 so the site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere.
CST038	Springbank Farm, Church Stretton	Church Stretton	1.28	38	0.51	The site is an agricultural field located to the north of Church Stretton. It is allocated for employment development.	Surrounding character is predominantly agricultural.	Not Suitable	The site is allocated for employment development. As such it is not suitable for residential development. Furthermore, the potential access runs through flood zone 2 and approximately 50% of the site is located in flood zones 2 and/or 3, therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally the suitability of any proposed access would be subject to highway approval. The topography of the site undulates, which could have implications for development. The site is located within the AONB, therefore major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. The site is also in proximity of a local wildlife site and local nature reserve, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Suitable	The site is allocated for employment development. Therefore employment development on the site would be considered an appropriate use. However, the potential access runs through flood zone 2 and approximately 50% of the site is located in flood zones 2 and/or 3, therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally the suitability of any proposed access would be subject to highway approval. The topography of the site undulates, which could have implications for development. The site is located within the AONB, therefore major development of this site is subject to an assessment of impact on the special qualities of this AONB. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the public interest of the development outweighs the harm, in line with paragraph 116 of NPPF. The site is also in proximity of a local wildlife site and local nature reserve, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
CMO002	Curdale Farm, Ludlow Road, Cleobury Mortimer	Cleobury Mortimer	8.73	262	3.49	Large site to the west side of Cleobury Mortimer's development boundary, encompassing the existing Curdale Farmyard and associated field. A slightly undulating site with a pool to the south side, this site runs along Ludlow Road at its northern border.	Residential areas of Cleobury Mortimer are immediately east of the site, and is otherwise surrounded by agriculture on all other sides.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the built form and development boundary of the settlement. Consequently open market residential is contrary to policy. However the site is considered to have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. Specifically, the site contains overhead power lines which could impact the potential for development. The site is also within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the built form and development boundary of the settlement. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site is considered to have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. Specifically, the site contains overhead power lines which could impact the potential for development. The site is also within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. CST035	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Additionally, the access route to the site runs through Flood Zone 3 so the site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. Additionally, the access route to the site runs through Flood Zone 3 so the site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere.
CST036	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. CMO003	Land off Ludlow Road (A4117), Cleobury Mortimer	Cleobury Mortimer	7.24	217	2.90	Large site to the west of the built form of Cleobury Mortimer. The site is fairly large and flat, and is surrounded by agricultural fields, and is adjacent to Ludlow Road (to the south).	Agricultural use surrounds 3 sides of the site with Ludlow Road to the south and a cemetery to the east.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the built form and development boundary of the settlement. Consequently open market residential is contrary to policy. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints identified. Specifically the site contains overhead power lines which could impact the potential for development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the built form and development boundary of the settlement. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints identified. Specifically the site contains overhead power lines which could impact the potential for development.
CMO004	Land to the north of Station Road, Cleobury Mortimer	Cleobury Mortimer	4.01	120	1.60	Large agricultural site to the east side of the town. Fairly steep sided site with lots of large trees, immediately south of the River Rea.	Station Road wraps around the site to the east and south sides, with residential to the south-east. The River Rea runs along the northern boundary with agricultural fields on the other side. Plant nursery to east of the site.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the built form and development boundary of the settlement. Consequently open market residential is contrary to policy. However the site, outside of the small area located within flood zones 2 and/or 3, may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints identified. Specifically the site is within 300m of a Conservation Area, a Scheduled Monument and one or more listed buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the built form and development boundary of the settlement. As such employment development is limited to small scale rural enterprise and diversification schemes. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CMO005	North East of Catherton Road, Cleobury Mortimer	Cleobury Mortimer	3.91	117	1.56	Large site located to the north east of the town's built form. The site is slightly undulating with Catherton Road wrapped around its western edge. Very little on site with no tree or overhead infrastructure.	Site is adjacent Catherton Road and agricultural fields to the west and north. To the south are the residential curtilages within the development boundary and sports pitches from the nearby school are to the east.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the built form and development boundary of the settlement. Consequently open market residential is contrary to policy. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints identified. Specifically, the ability to provide an appropriate access to and into the site is subject to highway approval. The site is within 30m of a Veteran Tree/ tree protected by a Tree Preservation Order. Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the built form and development boundary of the settlement. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CMO006	Land to the east of Fryers Close, Cleobury Mortimer	Cleobury Mortimer	0.55	17	0.22	The site consists of an area in industrial use and a residential dwelling and its curtilage, off Ludlow Road in the centre of Cleobury Mortimer. An existing permission is extant on the site for a 58 bedroom residential care home.	The site is mostly surrounded by residential development, however there is also a medical centre and sports pitches in proximity.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the built form of the development and has an existing consent for a care home. It is likely to be considered suitable for residential development. The site is partly within a Conservation Area, and therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is within proximity of a scheduled monument and one or more Listed Buildings, and therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within proximity of one or more TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the built form of the development and has an existing consent for a care home. It is likely to be considered suitable for employment development. The site is partly within a Conservation Area, and therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. CMO017	Rear of Manor House, Cleobury Mortimer	Cleobury Mortimer	0.35	10	0.14	Land to the rear of Manor House Nursing Home. The site is currently garden land and cannot be accessed from the nearby roads or pathways.	Manor House Nursing Home is directly north of the site, with residential dwellings surrounding the site. The are several retail outlets north of the site, as well as a bank and public house. The site is set off slightly from the main High Street which runs through the town, with the nearest road being Tenbury Road the west, and Eagle Lane to the south.	Not Suitable	Whilst the site is within the development boundary, thus meaning that open market residential development may be appropriate, the site is currently inaccessible for vehicles and pedestrians. The site does however sit within proximity of most of the services that Cleobury Mortimer has to offer. The site contains and is in proximity of trees protected by a Tree Preservation Order, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of a Scheduled Monument and several listed buildings. Development is therefore subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is located within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.	Not Suitable	Whilst the site is within the development boundary, thus meaning that employment development may be appropriate, the site is currently inaccessible for vehicles and pedestrians. The site does however sit within proximity of most of the services that Cleobury Mortimer has to offer. The site contains and is in proximity of trees protected by a Tree Preservation Order, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of a Scheduled Monument and several listed buildings. Development is therefore subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is located within a Conservation Area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.
CMO018	Land South of Tenbury Road, Cleobury Mortimer	Cleobury Mortimer	1.33	40	0.53	Area of land encircling an existing employment area and an employment allocation (part developed). The site consists of part of two agricultural fields.	Encircled within the site is an employment area. To the south of the site character is predominantly agricultural. To the north of the site character is mixed housing/agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is in part located adjacent to but is entirely outside the built form and development boundary of the settlement. Consequently open market residential is contrary to policy. However the site may have long term potential for development subject to appropriate policy changes and management of any physical, heritage and environmental constraints, particularly whether the existing employment area could be appropriately buffered, although given the site size and shape this does appear unlikely and the need to provide an appropriate external site boundary. There would also be a need to demonstrate an appropriate access to and into the site can be established. Furthermore the site is within proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is in part located adjacent to but is entirely outside the built form and development boundary of the settlement. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment development subject to appropriate policy changes and management of any physical, heritage and environmental constraints. Specifically, the need to provide an appropriate external site boundary and there would also be a need to demonstrate an appropriate access to and into the site can be established and that the undulating nature of the site is compatible with employment uses. Furthermore the site is within proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CMO019	Land to the South of Lion Lane, Cleobury Mortimer	Cleobury Mortimer	1.78	53	0.71	The site consists of parts of three agricultural fields located to the south of Cleobury Mortimer.	The character to the south, east and west is predominantly agricultural. The character to the north is predominantly residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the built form and development boundary of the settlement. Consequently open market residential is contrary to policy. The site potentially has long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints, particularly the fact that the site is elevated above nearby housing in Cleobury Mortimer, meaning that the relationship between any development on the site and surrounding uses would require careful consideration and the need to consider the appropriateness of the southern and western site boundaries. Furthermore, a small portion of the northern element of the site is located within a conservation area, the remainder of the site is in proximity to this conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of a scheduled monument and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. CMO017	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, achievable and viable (subject to any further necessary viability assessment). However the site is not considered suitable for development as it is not accessible for vehicles or pedestrians.	Rejected	Availability, achievability and viability of the site are unknown. Furthermore the site is not considered suitable for development as it is not accessible for vehicles or pedestrians.
CMO018	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been promoted for employment uses. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. CRA001	Abattoir site, Craven Arms	Craven Arms	0.85	26	0.34	Abattoir site comprising number of buildings and extensive hardstanding area. Site lies within Craven Arms, to the south of the Corvedale Road, before it crosses the river Onny. The associated lairage forms the eastern edge of the settlement in this location.	Retail, commercial and residential to the west, road frontage to north with electricity substation on other side of road, agricultural land/river corridor with trees to south (river Onny) and grazing land (lairage) for abattoir animals to east.	Currently Suitable - Subject to Further Detailed Assessment	A small part of the site are within Flood Zones 2 and/or 3. The area of the site outside this zone has potential for residential development (following the relocation of the existing abattoir) as it is located within the Craven Arms settlement boundary. This potential is subject to the appropriate management of any physical, heritage and environmental constraints present. For instance the site is within 300m of a Conservation Area and several Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA002	South of Clun Road, Craven Arms	Craven Arms	5.18	155	2.07	This is one of a group of four sites running parallel with, and to the south of, Clun Road between the A49 and Park Lane. The others are CRA003, CRA004 and CRA005. This site forms the visible plateau of the hillock overlooking Clun Road and the southern edge of Craven Arms. The site is a large area of undeveloped land which extends along the railway embankment of the Heart of Wales rail line. It is in agricultural use (grazing) and contains one agricultural building. The site also contains a Scheduled Monument.	The rail line to Knighton forms the southern boundary and there are a couple of houses to the north east. The site is in agricultural use within a countryside setting. It has no road frontage and its significant elevation above Craven Arms couple with the separation by the Clun Road enforces the physical and visual isolation of the land.	Not Suitable	The site contains a scheduled monument, consequently development on this element of the site and an appropriate buffer is likely to lead to substantial harm to or total loss of significance of one or more designated heritage assets and as such is contrary to national policy. The site is also landlocked, access to the site is therefore dependent on an the development of an adjacent site and may have to cross flood zones 2 and/or 3. This site is therefore unsuitable for development.	Not Suitable	The site contains a scheduled monument, consequently development on this element of the site and an appropriate buffer is likely to lead to substantial harm to or total loss of significance of one or more designated heritage assets and as such is contrary to national policy. The site is also landlocked, access to the site is therefore dependent on an the development of an adjacent site and may have to cross flood zones 2 and/or 3. This site is therefore unsuitable for development.
CRA003	Land at Burnside Close / Clun Road, Craven Arms	Craven Arms	3.42	103	1.37	This is one of a group of four sites running parallel with, and to the south of, Clun Road between the A49 and Park Lane. The others are CRA002, CRA004 and CRA005. This site is the most easterly and comprises a large, rectangular field situated next to the rail viaduct over Clun Road. It is accessed from the Burnside Close cul de sac. The site lies at the bottom of the steep hillock overlooking Clun Road and runs westward from the viaduct to the rear of the residential properties along Clun Road, finishing at the boundary with the dwellings of Orchard House and Ambleside.	Character to south and west is predominantly agricultural. Character to the north is predominantly residential. To the east is a small part of an agricultural field, beyond which it is a mix of uses including residential, commercial and open spaces.	Not Suitable	The site is located on the edge of the settlement, adjacent to but outside the development boundary. Consequently, open market residential development on the site is currently contrary to Local Pan policy. Currently the only access to the site runs through Flood Zone 3. Therefore the site would only be considered suitable if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.	Not Suitable	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the only access to the site runs through Flood Zone 3. Therefore the site would only be considered suitable if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.
CRA004	Immediately south of Clun Road, Craven Arms	Craven Arms	6.82	205	2.73	This is one of a group of four sites running parallel with, and to the south of, Clun Road between the A49 and Park Lane. The others are CRA002, CRA003 and CRA005. This site comprises a large, field adjoining CRA002 and is the most westerly site of the series. It is agricultural use (grazing) and a small brook runs west to east through the centre of the site. There are two agricultural buildings in the middle of the site. These are accessed by a track from Clun Road.	The Heart of Wales railway line forms the southern boundary of the site, whilst Park Lane marks the western boundary and Clun Road the northern boundary. Beyond these, the land is essentially rural in character although there is bed and breakfast accommodation and some residential development to the north of Clun Road.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside the development boundary. Consequently, open market residential development on the site is currently contrary to Local Pan policy. The element of the site located in Flood Zones 2 and/or 3 (which runs through the centre of the site) and the element of the site which would require an access running through Flood Zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access is subject to highway approval. The site is within 250m of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a scheduled monument, therefore The site is within 300m of insert names of assets development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the element of the site located in Flood Zones 2 and/or 3 (which runs through the centre of the site) and the element of the site which would require an access running through Flood Zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access is subject to highway approval. The site is within 250m of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a scheduled monument, therefore The site is within 300m of insert names of assets development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA005	Land to the rear of Ambleside off Clun Road, Craven Arms	Craven Arms	0.40	12	0.16	This is one of a group of four sites running parallel with, and to the south of, Clun Road between the A49 and Park Lane. The others are CRA002, CRA003 and CRA004. This site is in agricultural use (grazing) and contains several mature trees. It is bounded by the Heart of Wales railway line to the south and lies at a higher elevation than Clun Road. There is no obvious vehicular access and this combined with its relatively remote nature and elevation gives it an isolated feel.	Surrounded to west and east by agricultural land (grazing) and large house on detached grounds to north. The Heart of Wales railway line marks southern boundary but the surrounding area is essentially rural in character.	Not Suitable	The site is located on the edge of the settlement, adjacent to but outside the development boundary. Consequently, open market residential development on the site is currently contrary to Local Pan policy. Currently the only access to the site runs through Flood Zone 3. Therefore the site would only be considered suitable if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.	Not Suitable	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. CRA001	Not Currently Available - Likely to become so	The site was represented during the SAMDev Site Allocations process for a relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future. Specifically there is a stated aspiration within the current Development Plan to relocate the abattoir to the proposed Newington Food Park. This relocation will allow the redevelopment of the existing site, which will act as a catalyst for the redevelopment of the wider area. Specifically there is a stated aspiration within the current Development Plan to relocate the abattoir to the proposed Newington Food Park. This relocation will allow the redevelopment of the existing site, which will act as a catalyst for the redevelopment of the wider area.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site was represented during the SAMDev Site Allocations process. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available (following the relocation of the existing abattoir); achievable; and viable (subject to any further necessary viability assessment) for residential development. Suitability of the site for residential development is subject to appropriate assessment and management of the impact on physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Such constraints include: Flood Zones 2 and/or 3; proximity to a Conservation Area and to several Listed Buildings. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. CRA006	West of New Holding, Watling Street, Craven Arms	Craven Arms	2.69	81	1.08	Agricultural land (grazing) on the north western edge of Craven Arms. The site consists of parts of two agricultural fields but excludes the farmstead of New Holding and its immediate curtilage. The site runs to the west of Watling Street between a small brook north of New Holding (north) and Oak Cottage/ Tanglewood Farm (south).	Land to the east of the site is an allocated housing site CRAV003. To the north, west and south the land is rural in character. However, some agricultural buildings have begun to be used for more urban activities, such as a commercial 'play barn' (south).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide appropriate pedestrian access to and into the site would need due consideration. The site is within 30m of several Veteran Trees and some TPOs. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the remainder of the site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide appropriate pedestrian access to and into the site would need due consideration. The site is within 30m of several Veteran Trees and some TPOs. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA007	Land North of Council Depot off Clun Road, Craven Arms	Craven Arms	14.44	433	5.78	This site lies to the west of Watling Street but is separated from this road by CRA015 and CRA016. It is an extensive area of open countryside comprising a number of agricultural fields which are some considerable distance from the built edge of the town. The site extends south to Clun Road where it forms part of the rural gateway to Craven Arms.	The surrounding land is almost all in agricultural use with the exception of the highways depot in the south-east corner. It is rural in character and physically distinct from the settlement of Craven Arms.	Not Suitable	The site is located outside the development boundary and in the countryside for policy purposes. Consequently, open market residential development on the site is currently contrary to Local Pan policy. Furthermore the site is separated from the built form of the settlement by an agricultural field, therefore it is unsuitable in isolation. The site may however have long term potential as part of a wider development, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site contains a veteran tree and is in proximity of one or more trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located outside the development boundary and in the countryside for policy purposes. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is separated from the built form of the settlement by an agricultural field, therefore it is unsuitable for other forms of employment development in isolation. The site may however have long term potential for other forms of employment as part of a wider development, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site contains a veteran tree and is in proximity of one or more trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
CRA010	Land north of Long Lane, Craven Arms	Craven Arms	1.85	55	0.74	The site comprises agricultural land on the north western edge of Craven Arms to the north of Long Lane. The land is essentially rural in nature and there is extensive hedgerow and tree cover on the boundaries. This rurality typifies the marked change in landscape character over a short distance in Craven Arms: from the sharply defined urban edge of the settlement to the east of Watling Street to land in active agricultural use to the west.	The site adjoins the Craven Arms gypsy site to the east. The remainder of the surrounding land is in active agricultural use. More widely, the Craven Arms Business Park lies to the south-east and the Shropshire Hills AONB boundary is less than 1km away to both the east and west.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance there is no pedestrian footpath to the site. The site is within 300m of a Listed Building. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance there is no pedestrian footpath to the site. The site is within 300m of a Listed Building. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA011	Land north west of Craven Arms	Craven Arms	2.76	83	1.11	This almost square site is in active agricultural use. It lies just beyond the north western edge of Craven Arms, immediately north of the existing gypsy and traveller site. It is relatively remote from Craven Arms and has an isolated feel.	Agricultural land on all sides but around half of the southern boundary adjoins an existing gypsy and traveller site.	Not Suitable	The site is located on the edge of the settlement, adjacent to but outside the development boundary. Consequently, open market residential development on the site is currently contrary to Local Pan policy. Furthermore, the site is not suitable for development as it has no access. The site is also within proximity of a scheduled monument and listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located on the edge of the settlement, adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is not suitable for development as it has no access. The site is also within proximity of a scheduled monument and listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
CRA012	Employment site off Shrewsbury Road, Craven Arms	Craven Arms	2.35	71	0.94	site comprises a timber merchant and architectural salvage depot with extensive road frontage onto A49. Site is within the built form of Craven Arms	Surrounding character is urban. The Shrewsbury to Hereford railway line forms the western boundary whilst the A49 forms the eastern boundary. Commercial premises to the north and south and residential properties on the other side of the A49 add to the built up character of the area.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Brownfield site within development boundary. However the site is protected employment land. Therefore residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance amenity issues linked to neighbouring railway, road and commercial properties will need to be assessed and taken into account. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	Brownfield site within development boundary. However the site is protected employment land. Therefore employment development is consistent with policy. Types of employment uses on the site will need to complement the sites location. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

CRA006	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives. Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside and open market residential development is currently contrary to policy. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of its availability, achievability and viability; appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
CRA007	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. CRA014	Land West of the Railway Line, North West of Craven Arms	Craven Arms	8.47	254	3.39	This is a large field at some distance from the built form of Craven Arms. It is rural in character and in active agricultural use. The sense of isolation is increased by the Shrewsbury to Hereford railway line along the eastern boundary.	All adjacent land is in agricultural use and is rural in character.	Not Suitable	The southern third of the site is adjacent to but outside the Craven Arms development boundary. The remainder of the site projects into the countryside. Consequently, open market residential development on the site is currently contrary to Local Plan policy. Furthermore, the sites only potential vehicular access would increase its separation from the settlement. The site is also within proximity of a scheduled monument and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a veteran tree, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The southern third of the site is adjacent to but outside the Craven Arms development boundary. The remainder of the site projects into the countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the sites only potential vehicular access would increase its separation from the settlement, therefore it is unsuitable for other forms of employment development. The site is also within proximity of a scheduled monument and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a veteran tree, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
CRA015	Land North of Clun Road and East of Watling Street, Craven Arms	Craven Arms	0.87	26	0.35	Site on periphery of Craven Arms, west of Watling Street / the former path of Watling Street and close to its now realigned junction with the B4368 Clun Road. The site consists of part of an arable field. Land levels rise gently to the north and west.	Site envelopes a pair of semi-detached dwellings to the immediate southwest. There are two further properties beyond a gap to the north, and a residential caravan and recently constructed 'affordable' house south of the main road.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary which is defined to the east of Watling Street. Therefore residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site has a poorly defined western boundary, which cuts through an agricultural field, this will require due consideration. The field is grade 2 agricultural land. The site contains a veteran tree and is in proximity of one or more trees subject to a TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary which is defined to the east of Watling Street. Therefore employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site has a poorly defined western boundary, which cuts through an agricultural field, this will require due consideration. The field is grade 2 agricultural land. Employment development on the site would need to provide an appropriate buffer/be of a type which complements surrounding uses. The site contains a veteran tree and is in proximity of one or more trees subject to a TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA016	North of Clun Road, Craven Arms	Craven Arms	3.67	110	1.47	Site comprises three fields in agricultural use (grazing) to the west of Watling Street. It has a frontage onto Clun Road.	Predominantly rural and agricultural but it adjoins a 100% affordable housing "exceptions" scheme located to north east and there is housing to the south. The southwest corner of the site adjoins the highways depot.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is outside the Craven Arms development boundary although it is adjacent to a small exception site for housing along its eastern boundary and there is one residential property to the south. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site is within 500m of Ancient Woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the Craven Arms development boundary although it is adjacent to an exceptions housing site to the east and a residential property to the south. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site is within 500m of Ancient Woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA017	Tanglewood Farm, Craven Arms	Craven Arms	1.57	47	0.63	Site comprises two fields extending westwards from Watling Street. It includes Tanglewood Farm, which has two holiday cottages and a cattery as well as Mickey Millers Play Barn and a florist's, together with other agricultural buildings and a large area of hardstanding. Together these uses occupy approximately half the site area. The remainder of the site is in agricultural use.	Surrounding land is in agricultural use, with some agricultural storage buildings and hard standing to the west.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance amenity issues linked to the presence of a number of businesses within the site boundary will need to be taken into consideration. The site is within proximity of one or more TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance amenity issues linked to the presence of a number of businesses within the site boundary will need to be taken into consideration. The site is within proximity of one or more TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA018	South of Halford, Craven Arms	Craven Arms	6.44	193	2.57	This is a large, irregularly shaped field along the eastern side of the River Onny, off Corvedale Road and outside the built area of Craven Arms. It is in agricultural use and much of the site area is within Flood Zone 3.	Land to the north, east and west is in agricultural use and a wooded area of ox bow lakes associated with the adjacent River Onny comprises the part of the western boundary. The river runs between the site, the abattoir to the north-west and the remainder of Craven Arms.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore, the majority of the site is in Flood Zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site (northern element) may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site both contains and is in proximity to several Veteran Trees. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within a Conservation Area. Therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. Additionally the site is within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the majority of the site is in Flood Zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. CRA014	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives. Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, as the site is located in the countryside and open market residential development is currently contrary to policy. The site also projects into the countryside and its only potential vehicular access would increase its separation from the settlement.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site projects into the countryside and its only potential vehicular access would increase its separation from the settlement.
CRA015	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify this matter. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the sites location to the west of west of Watling Street, which defines the development boundary for the town and represents a significant physical boundary to development in Craven Arms; the sites poorly defined western boundary, which cuts through an agricultural field; and the fact that the field is grade 2 agricultural land. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site, albeit this site is distant from many of these services and facilities.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the sites location to the west of west of Watling Street, which defines the development boundary for the town and represents a significant physical boundary to development in Craven Arms; the sites poorly defined western boundary, which cuts through an agricultural field; and the fact that the field is grade 2 agricultural land. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site, albeit this site is distant from many of these services and facilities.
CRA016	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for development and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. CRA018	Currently Available	The northern part of the site was the subject of a refused Planning Application for a residential use, but it is understood that there remains development interest; the site is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in that part of the site outside Flood Zone 3 being available and will come forward for development.	Availability Unknown	The site has been the subject of either a refused or withdrawn Planning Application for an alternative use and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
CRA021	The Sidings west of Craven Arms Station, Craven Arms	Craven Arms	0.78	23	0.31	This is a linear urban site within the Craven Arms development boundary. Approximately half the site area is occupied by a railway siding, the remainder is covered by trees and scrub.	Essentially urban with residential and commercial uses as well as the Shrewsbury to Hereford railway line (to the west), although the north west corner of the site borders an agricultural field.	Not Suitable	Although the principle of development is accepted on this site as it is within the Craven Arms development boundary, the site is not suitable for development as it has no vehicular access and is dependent on the layout on the adjacent allocation to provide such an access in the future. Additionally, it is not clear whether the rail sidings within the site are in active use or not. If so, then the developable area of the site is greatly reduced and amenity issues associated with the sidings may preclude residential development. If the sidings are not in use, amenity issues associated with the adjacent Shrewsbury to Hereford rail line will need to be taken into consideration as much of the site is relatively narrow and tight against the railway line.	Not Suitable	Although the principle of development is accepted on this site as it is within the Craven Arms development boundary, the site is not suitable for development as it has no vehicular access and is dependent on the layout on the adjacent allocation to provide such an access in the future. Additionally, it is not clear whether the rail sidings within the site are in active use or not. If the sidings are not in use, amenity issues associated with the adjacent Shrewsbury to Hereford rail line will need to be taken into consideration as much of the site is relatively narrow and tight against the railway line.
CRA023	Lane East of Watling Street, North of Sibdon Fields, Craven Arms	Craven Arms	1.58	48	0.63	The site is rural in character, comprising a rectangular field to the west of Watling Street and beyond the built edge of Craven Arms.	Rural in character, although a small exception site for housing is adjacent to part of the southern boundary and land on the other side of Watling Street is in residential use.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints.
CRA024	Lane East of Watling Street, South of Tanglewood Farm, Craven Arms	Craven Arms	2.97	89	1.19	This site comprises a field to the west of Watling Street and south of Tanglewood Farm. It is in agricultural use and contains two ponds close to its boundary with Watling Street.	The surrounding character is generally rural with the exception of the businesses associated with Tanglewood Farm (Mickey Miller's Play Barn, holiday cottages, florist's etc). The sites eastern boundary with Watling Street marks the change from the suburban edge of Craven Arms to open countryside.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site is within 30m of a TPO. Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site is within 30m of a TPO. Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA025	Lane East of Watling Street, North of Tanglewood Farm, Craven Arms	Craven Arms	1.60	48	0.64	The site is one of a series of fields running generally east-west on the west side of Watling Street, but outside the urban area of Craven Arms. It is in agricultural use but includes some buildings associated with an agricultural contractors business adjacent to the site and on the Watling Street frontage.	Land to the east of the site is urban in nature, comprising allocated housing land (CRA003 and CRA009). To the north, west and south the land is rural in character. However, some agricultural buildings to the south have begun to be used for more urban activities, such as a commercial 'play barn'. Watling Street forms a clear boundary to the east between the built form of Craven Arms and the countryside within which this site is located.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site is within 30m of a Veteran Tree. Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site is within 30m of a Veteran Tree. Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA026	Land at 2 Oakfield, Clun Road, Craven Arms	Craven Arms	0.52	16	0.21	The site consists of a dwelling, its curtilage and paddock land. The site is located to the south of Clun Road, to the South West of Craven Arms.	Surrounding character is predominantly agricultural/rural. A housing allocation is located to the north east of the site. The site is bounded by the railway line to the South. Clun Road to the North and West; and Roman Road to the East.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, separated from the development boundary by Clun Road. Consequently, open market residential development on the site is currently contrary to Local Plan policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site is somewhat separated from the built form of the settlement by Clun Road and Watling Street. The site is in proximity of ancient woodland, therefore the site is within 500m of an Ancient Woodland site. Development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, separated from the development boundary by Clun Road. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. CRA027X	adjacent Brandlea adjoining Newton Lane	Craven Arms	0.07	N/A	N/A						
CRA028	Land at Halford, Corvedale Road, Craven Arms	Craven Arms	1.97	59	0.79	A linear site located to the south of Corvedale Road. The site consists of the northern element of two agricultural fields.	Character to the east and south is predominantly agricultural. Character to the east is employment/commercial. Character to the north is a mix of residential and agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located in proximity to, but separated from the development boundary by an area of land located within the flood zone. As such residential development is contrary to policy. However, the site may have long term potential subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is in proximity of numerous veteran trees and trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The ability to provide an appropriate access to and into the site is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located in proximity to, but separated from the development boundary by an area of land located within the flood zone. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is in proximity of numerous veteran trees and trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The ability to provide an appropriate access to and into the site is subject to highway approval.
CRA029	Garage Corvedale Rd, Craven Arms	Craven Arms	0.27	8	0.11	The site consists of a garage building, its forecourt and associated hardstanding; and a funeral services building and associated hardstanding.	Surrounding character is a mix of residential and commercial.	Currently Suitable - Subject to Further Detailed Assessment	The site is a brownfield site within the development boundary. Suitable in principle for residential development. A positively designed scheme could enhance the site and its setting, which is a gateway into the town. Therefore the site is suitable subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is brownfield and in use as a garage, therefore there are potential contamination issues. The site is also in proximity of a conservation area and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is a brownfield site within the development boundary. Suitable in principle for employment development. A positively designed scheme could enhance the site and its setting, which is a gateway into the town. Therefore the site is suitable subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is brownfield and in use as a garage, therefore there are potential contamination issues. The site is also in proximity of a conservation area and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA030	Land at Newton Farm, Craven Arms	Craven Arms	8.47	254	3.39	Linear series of agricultural fields running along Shrewsbury Road to the north of Craven Arms. The site is allocated for employment development.	Character is predominantly agricultural to the north east and west. To the south character is primarily employment based, with pockets of residential and agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. As such residential development is contrary to policy. Furthermore, part of the site (along its western boundary) is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site does have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is linear projecting into the countryside and elements of the site (particularly in the north) are some distance from services and facilities within the town, the amenity value of residents will therefore require some consideration. The site is also in proximity of a scheduled monument and listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The suitability of access to and into the site for pedestrians, cyclists and vehicles is subject to highway approval, this is a particular concern for residential development.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. However, part of the site (along its western boundary) is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is suitable subject to appropriate management of any physical, heritage and environmental constraints present. For instance, the site is linear projecting into the countryside and elements of the site (particularly in the north) are some distance from services and facilities within the town, although this is less of a concern for employment development. The site is also in proximity of a scheduled monument and listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA031	Land west of A49, Craven Arms	Craven Arms	2.62	79	1.05	Two agricultural fields located to the north of Craven Arms between the Railway Line and Shrewsbury Road. The site is allocated for employment development.	Character is predominantly agricultural to the north east and west (land to east and west is allocated for employment development). To the south character is primarily employment based, with pockets of residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. As such residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site lies alongside the railway line and within an area predominantly characterised by employment uses, this relationship will need to be considered to ensure residential amenity. The site is also in proximity of a scheduled monument and listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance, the site is also in proximity of a scheduled monument and listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
CRA032	Land north of Long Lane, Craven Arms	Craven Arms	3.44	103	1.38	Triangular shaped site currently in use as an agricultural field. The site is bounded by Watling Street to the west; the railway line to the east and Long Lane to the south. The site is allocated for employment development.	Character is predominantly agricultural to the north east and west (land to east is allocated for employment development). To the south character is primarily employment based, with pockets of residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. As such residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is within an area predominantly characterised by employment uses, this relationship will need to be considered to ensure residential amenity. The site is also in proximity of a scheduled monument and listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. CRA027X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
CRA028	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable, achievable. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
CRA029	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is an employment allocation, consequently open market residential development is contrary to policy. Furthermore, part of the site (along its western boundary) is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the fact that the site is linear projecting into the countryside and elements of the site (particularly in the north) are some distance from services and facilities within the town, the amenity value of residents will therefore require some consideration. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. Suitability of the site for employment development (apart from a small area located in flood zones 2 and/or 3 - this part of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere) is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
CRA031	Currently Available	The site has been allocated for employment development. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. CRA033	West of Craven Arms Business Park, Craven Arms	Craven Arms	3.71	111	1.48	The site consists of a rectangular agricultural field located to the east of Watling Street and the Craven Arms Business Park.	Character to the south and west is predominantly agricultural. Character to the north is also predominantly agricultural although there is also a small gypsy and traveller site. Character to the west is predominantly commercial, consisting of the Craven Arms Business Park.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located adjacent to the Craven Arms Business Park, therefore the relationship between the two sites will require due consideration. Watling street lacks a pedestrian footpath.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment development subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located adjacent to the Craven Arms Business Park, therefore the relationship between the two sites will require due consideration. Watling street lacks a pedestrian footpath.
CRA034X	rear of 10 Norton View	Craven Arms	0.19	N/A	N/A						
CRA035X	Grasmere Clun Rd, Craven Arms	Craven Arms	0.10	N/A	N/A						
ELL001	Land off Scotland Street, Ellesmere	Ellesmere	0.35	11	0.14	The site consists of a grassed area fronting Scotland Street and a larger grassed area to the rear of the buildings fronting Scotland Street containing a number of buildings in various conditions and states of disrepair. A tool hire company operates from one of the buildings on the site.	Adjacent uses include residential and retail to the north; east; west; and south east. Land to the south has permission for a medical centre, beyond this is a large supermarket and further residential development.	Not Suitable	The site is not currently suitable for development as approximately 2/3 of this site is located within flood zones 2 and/or 3 and the remainder of the site is below the threshold for this assessment. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated, and it will not increase risk elsewhere. Furthermore, highways would need to establish if access to the site off Scotland Street is appropriate or if an alternative access is possible. The site is located within the Ellesmere Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of numerous Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is not currently suitable for development as approximately 2/3 of this site is located within flood zones 2 and/or 3 and the remainder of the site is below the threshold for this assessment. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ELL003	Land near Blackwater Meadow Marina, Ellesmere	Ellesmere	1.16	35	0.46	The western part of an undulating field, currently used for cattle grazing. There are mature trees located within and forming much of the northern and southern boundaries to the site.	Surrounding uses comprise of low density residential to the north, a canal marina to the south and cricket ground to the west.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the south eastern edge of the settlement, adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However the site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is within 300m of a Scheduled Monument, a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also adjacent to one Wildlife Site and within 250m of a second Wildlife Site. Development is subject to an assessment of the impact on these locally designated sites. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is within 300m of a Scheduled Monument, a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also adjacent to a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

CRA033	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been submitted through the 'call for sites' for a relevant use. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. However, as the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment development, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
CRA034X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
CRA035X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
ELL001	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	The viability of mixed use development is very much dependent on the mix of uses and the location of the potential development site. Consequently, for the purpose of this exercise, where a site is promoted for mixed use development it is assumed that the site is viable for this proposed mix of uses. For other sites where viability is less certain, the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for mixed use development.	Rejected	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is not suitable for development as it is subject to a physical, environmental, or heritage constraint. Specifically much of it is located in flood zones 2 and/or 3, consequently open market residential development would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere; furthermore the site is also located within the Ellesmere Conservation Area, therefore development of this site is subject to an assessment of impact on the specified asset(s). If suitable mitigation of any identified adverse impact were possible, the site's development potential would also depend on suitable assessment and management of other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include establishing an appropriate access to the site; and appropriate design which complements the sites setting within the Ellesmere Conservation Area and proximity to listed buildings. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is not currently suitable for development as it is subject to a physical, environmental, or heritage constraint and the sites suitability is dependent on whether appropriate mitigation of any impact is possible. Specifically much of it is located in flood zones 2 and/or 3, consequently employment development would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere; furthermore the site is also located within the Ellesmere Conservation Area, therefore development of this site is subject to an assessment of impact on the specified asset(s). If suitable mitigation of any identified adverse impact were possible, the sites development potential would also depend on confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include establishing an appropriate access to the site; and appropriate design which complements the sites setting within the Ellesmere Conservation Area and proximity to listed buildings. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
ELL002	Currently Available	The site has been allocated for employment development. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been allocated for employment development. ELL005	Land South of Oswestry Road, Ellesmere	Ellesmere	7.00	210	2.80	Large undulating site in agricultural use to the south of Ellesmere.	To the north east are the grounds of Lakelands School. To the east, south east and south is an existing allocated site, which has recently received Planning Permission for a mixed use development. To the west (South of Scotland Street) is a single dwelling and its grounds, beyond which is open countryside in agricultural use. To the west (North of Scotland Street) is an industrial estate. To the north west the industrial estate continues and there is also residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the southern edge of the settlement, adjacent to but outside of the settlement development boundary (surrounded by the boundary to north, east and west). Consequently open market residential development on the site would currently be contrary to policy. However the site, outside the small area located within flood zones 2 and/or 3, may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the need to provide an appropriate access to the site; the need to provide a more defined south western boundary to the site. The site contains two veteran trees and is within proximity of a number of trees subject to TPO. Development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Area. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the southern edge of the settlement, adjacent to but outside of the settlement development boundary (surrounded by the boundary to north, east and west). As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment, outside of the small area located within flood zone 2 and/or 3, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the need to provide an appropriate access to the site; the need to provide a more defined south western boundary to the site. The site contains two veteran trees and is within proximity of a number of trees subject to TPO. Development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Area. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ELL006	Land at Grange Road, Ellesmere	Ellesmere	2.80	84	1.12	Two fields adjacent to the northern settlement boundary of Ellesmere.	To the north, north west and north east is open countryside, in agricultural use. To the south, south east and south west is residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located to the north of Ellesmere. It is located adjacent to but outside the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However the site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to the site is unclear. Whilst the site has a road frontage on its eastern boundary (Hill Crest), this road is narrow and rural in character. It also offers poor linkage into Ellesmere town. If an appropriate access can be established, then the site may have long term potential. The site is within 300m of a Conservation Area and a Listed Building. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of two Wildlife Sites. Development is subject to an assessment of the impact on these locally designated sites. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site contains and is within proximity of a number of TPO's, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located to the north of Ellesmere. It is located adjacent to but outside the settlement development boundary. Consequently employment development on the site is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to the site is unclear. Whilst the site has a road frontage on its eastern boundary (Hill Crest), this road is narrow and rural in character. It also offers poor linkage into Ellesmere town and the wider highway network which is a particular concern for employment development - therefore if the site is appropriate for employment development it is likely to be employment uses without the need for bulky delivery/dispatches e.g. offices. If an appropriate access can be established, then the site may have long term potential. The site is within 300m of a Conservation Area and a Listed Building. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site contains and is within proximity of a number of TPO's, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ELL007	Land off Cherry Drive, Ellesmere	Ellesmere	3.13	94	1.25	Fallow land on the western edge of Ellesmere.	To the north is agricultural land with Planning Permission for residential development (130 dwellings). To the east is residential development. To the south is agricultural land with Planning Permission for employment (extension to Ellesmere Business Park) and west are agricultural fields.	Not Suitable	The site is located to the west of Ellesmere. It is located adjacent to but outside the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore, approximately 2/3 of the site is located within flood zones 2 and/or 3 (south and central part of site) - this portion of the site is unsuitable for development and the proposed submission is for use as open space. The remainder of the site could have some capacity for development however there is currently no obvious means of establishing an access to this portion of the site that would be outside flood zone 2. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere or a suitable alternative access can be demonstrated.	Not Suitable	The site is located to the west of Ellesmere. It is located adjacent to but outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 2/3 of the site is located within flood zones 2 and/or 3 (north and central part of site) - this portion of the site is unsuitable for development and the proposed submission is for use as open space. The remainder of the site could have some capacity for other forms of employment development however there is currently no obvious means of establishing an access to this portion of the site that would be outside flood zone 2. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere or a suitable alternative access can be demonstrated.
ELL008	Land at the Nursery, Oswestry Road, Ellesmere	Ellesmere	1.33	40	0.53	The site consists of three small agricultural fields and a dwelling.	To the north of the site is an employment site. To the east of the site are agricultural fields. To the south of the site are agricultural fields, allocated for development (Planning Permission now secured) for a mixed use development. To the west of the site are agricultural fields (Planning Permission secured for a mixed use development).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located to the south of Ellesmere. It is located adjacent to but outside the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the portion of the site located outside of flood zones 2/3 may have long term potential for development subject to policy change and appropriate management of any physical, heritage and environmental constraints present. For instance management and mitigation of flood risk and establishing an appropriate access into the site (the site already benefits from an access onto Scotland Street).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located to the south of Ellesmere. It is located adjacent to but outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the portion of the site located outside of flood zones 2/3 may have long term potential for other forms of employment development subject to policy change and appropriate management of any physical, heritage and environmental constraints present. For instance management and mitigation of flood risk and establishing an appropriate access into the site (the site already benefits from an access onto Scotland Street).

ELL005	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Not Available	The site has been submitted through the 'call for sites' for an alternative use and within this submission the landowner/developer has specified that it is only available for this alternative use. Therefore information gathered for the purposes of this study suggests that the site is not available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Other employment areas exist within smaller settlements and in some rural locations and these will support additional demand and provision. Outside of these areas, there is a traditional dependence on agriculture and related sectors, therefore the formation of new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside (albeit surrounded to the north, east and south by the development boundary), consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the small area of the site located within flood zones 2 and/or 3; the need to provide an appropriate access to the site; the need to provide a more defined south western boundary to the site; its proximity (within 300m) to the Ellesmere conservation area; the presence of two Veteran Tress within the site and the site's proximity to a number of other trees protected by Tree Preservation Orders. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the small area of the site located within flood zones 2 and/or 3; the need to provide an appropriate access to the site; the need to provide a more defined south western boundary to the site; and its proximity (within 300m) to the Ellesmere conservation area; the presence of two Veteran Tress within the site and the site's proximity to a number of other trees protected by Tree Preservation Orders. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
ELL006	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Other employment areas exist within smaller settlements and in some rural locations and these will support additional demand and provision. Outside of these areas, there is a traditional dependence on agriculture and related sectors, therefore the formation of new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. Additionally, the ability to provide an appropriate access to the site is unclear. Whilst the site has a road frontage on its eastern boundary (Hill Crest), this road is narrow and rural in character. It also offers poor linkage into Ellesmere town. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the aforementioned highway access; TPO's on and in proximity to the site; the wildlife sites in proximity of the site; and the conservation area in proximity of the site. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. Additionally, the ability to provide an appropriate access to the site is unclear and of particular concern for employment development. Whilst the site has a road frontage on its eastern boundary (Hill Crest), this road is narrow and rural in character. It also offers poor linkage into Ellesmere town and the wider highway network. The site may have long term potential for other forms of employment, subject to confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the aforementioned highway access; TPO's on and in proximity to the site; the wildlife sites in proximity of the site; and the conservation area in proximity of the site. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
ELL007	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Not Available	The site has been submitted through the 'call for sites' for an alternative use and within this submission the landowner/developer has specified that it is only available for this alternative use. Therefore information gathered for the purposes of this study suggests that the site is not available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Other employment areas exist within smaller settlements and in some rural locations and these will support additional demand and provision. Outside of these areas, there is a traditional dependence on agriculture and related sectors, therefore the formation of new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not suitable for development as it is located adjacent to but outside the settlement development boundary and it therefore contrary to policy. Furthermore, it is also subject to a physical; environmental; or heritage constraints. Specifically approximately 2/3 of the site is located within flood zones 2 and/or 3 (north and central part of site - it has been acknowledged that this portion of the site is unsuitable for development and the proposed submission is for use as open space); the remainder of the site could have some capacity for development however there is currently no obvious means of establishing an access to this portion of the site that would be located outside flood zones 2 (the proposed submission includes an access located within flood zone 2). Consequently open market residential development would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include managing any potential impact on the wider highway network.	Rejected	It is understood that the site is not available for employment development. Viability and achievability of the site is unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is located to the west of Ellesmere. It is located adjacent to but outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 2/3 of the site is located within flood zones 2 and/or 3 (north and central part of site) - this portion of the site is unsuitable for development and the proposed submission is for use as open space. The remainder of the site could have some capacity for other forms of employment development however there is currently no obvious means of establishing an access to this portion of the site that would be outside flood zone 2. Consequently employment development would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include managing any potential impact on the wider highway network.
ELL008	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. ELL009	Station Building, Brownlow Road, Ellesmere	Ellesmere	0.32	10	0.13	The former station building (listed) and its immediate grounds. The wider site has been granted planning permission for a residential development (14/01744/OUT granted on the 13/11/2015).	To the south is residential development. To the north, east and west is the former station yard, which now benefits from permission for residential development.	Not Suitable	The site is a brownfield site located within the Ellesmere development boundary. Its wider yard has been granted permission for residential development. However the access to the site is located within flood zone 3, consequently the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, the site contains a Listed Building, therefore development is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a Conservation Area and one or more other listed buildings. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is an existing employment/brownfield site located within the Ellesmere development boundary. As the site is in existing employment use, an alternative employment use which does not require consent could occur. If an alternative employment use was proposed that required consent, as the access to the site is located within flood zone 3, it would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, the site contains a Listed Building, therefore development is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a Conservation Area and one or more other listed buildings. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ELL010	Land off Church Street, Ellesmere	Ellesmere	0.69	21	0.27	The site comprises an open green field which slopes down to the edge of The Mere. The site is located behind the row of properties that front Church / Talbot Street.	Surrounding uses are predominately residential and leisure (tennis courts, putting green etc) related to The Mere. A number of small business uses also front Talbot and Church Streets.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the eastern development boundary for Ellesmere. Consequently open market residential development on the site would currently be contrary to policy. However the site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to establish a highway access would be dependent on highway comments. The site is within the Ellesmere Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a Scheduled Monument and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Finally, the site's western boundary is within 30m of a Tree Preservation Order. Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the eastern development boundary for Ellesmere. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to establish a highway access would be dependent on highway comments. The site is within the Ellesmere Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a Scheduled Monument and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Finally, the site's western boundary is within 30m of a Tree Preservation Order. Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ELL013	Fullwood and Bland, Grange Road, Ellesmere	Ellesmere	3.36	101	1.35	The site is currently occupied by Fullwood Ltd which manufactures dairy equipment. It is characterised by large industrial buildings, areas of open storage, and areas of hard standing for vehicular parking/movements.	The site adjoins residential development to the south and east; agricultural land (allocated for employment development) to the north and north west; and previously developed land with Planning Permission for residential development to the south west	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within the Ellesmere settlement boundary. However the site is a protected employment site and as such open market residential development would be contrary to policy. The site does however have long term potential for residential development subject to a policy change and appropriate re-location/intensification of the existing business. A very small part of the site is within the Ellesmere Conservation Area, therefore development of the site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Ellesmere settlement boundary and is a protected employment site and as such employment development on the site would be consistent with policy. However the site is located within proximity of the Ellesmere Conservation Area (a very small portion is within the site boundary) and one or more listed buildings. Consequently development is subject to an assessment of impact on the significance of the setting of this heritage asset(s). The site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a wildlife site. Consequently development is subject to an assessment of impact on the locally designated site(s) within proximity of the site. The site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
ELL015	Land adj. cemetery, Ellesmere	Ellesmere	1.00	30	0.40	An overgrown field to the east of Swan Hill Road and north of the cemetery. It slopes down towards the Mere.	To the south is the cemetery; to the east and north east is a wooded belt and the Mere. To the north west and west is housing.	Not Suitable	The site is unsuitable for residential development as it is located adjacent to but outside of the development boundary, consequently it is contrary to policy. Furthermore, the site is part of a Wildlife Site. Development would lead to a significant adverse effect on a locally designated site and as such is contrary to policy.	Not Suitable	The site is unsuitable for employment development as it is located adjacent to but outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is part of a Wildlife Site. Development would lead to a significant adverse effect on a locally designated site and as such is contrary to policy.

ELL009	Currently Available	The Station Yard was subject to Planning Permission 14/01744/OUT for residential development (granted on the 13/11/2015). Within this permission it was suggested that the Station Building was available for conversion to apartments - application to follow this scheme. The site was also represented during the recent call for sites (as part of a larger submission with the wider site).	Availability Unknown	The site is an existing employment site. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for an alternative employment use. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. This site was promoted during the recent call for sites (2017) but for an alternative use.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Other employment areas exist within smaller settlements and in some rural locations and these will support additional demand and provision. Outside of these areas, there is a traditional dependence on agriculture and related sectors, therefore the formation of new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment) for residential development. However the access to the site is located within flood zone 3, consequently the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, the site contains a Listed Building which would require due consideration.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. As the site is in existing employment use which does not require consent could occur. If an alternative employment use was proposed that required consent, as the access to the site is located within flood zone 3, it would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, the site contains a Listed Building, therefore development is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a Conservation Area and one or more other listed buildings. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ELL010	Currently Available	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but it is understood that there remains development interest; the site is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purposes of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Other employment areas exist within smaller settlements and in some rural locations and these will support additional demand and provision. Outside of these areas, there is a traditional dependence on agriculture and related sectors, therefore the formation of new employment development will generally be in response to a specific need or business use. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is located within the Ellesmere Conservation Area. If suitable mitigation of any identified adverse effect on the significance of this constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the site is within proximity of one or more scheduled monuments and listed buildings; and the site is located within proximity of a wildlife site; the site is located in proximity to a TPO and the ability to provide an appropriate access to the site would depend on highway comments. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is located within the Ellesmere Conservation Area. If suitable mitigation of an identified adverse effect on the significance of this constraint were possible, the sites development potential for other forms of employment would also depend on appropriate changes to policies affecting this location; and suitable management of other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the site is within proximity of one or more scheduled monuments and listed buildings; and the site is located within proximity of a wildlife site; the site is located in proximity to a TPO and the ability to provide an appropriate access to the site would depend on highway comments. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
ELL013	Not Available	The site is currently occupied and in productive use. Shropshire Council Officers understand that the site is either not available or not available for this form of development. Therefore information gathered for the purposes of this study suggests that the site is not available for this form of development.	Availability Unknown	The site is currently in employment use. It is unclear if the site has capacity for intensification.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Other employment areas exist within smaller settlements and in some rural locations and these will support additional demand and provision. Outside of these areas, there is a traditional dependence on agriculture and related sectors, therefore the formation of new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered viable and achievable (subject to any further necessary viability assessment). As the site is currently occupied and in productive use it is not considered available. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However whilst the site is located within the settlement development boundary, it is not currently suitable for residential development as it is a protected employment site. The site may have long term potential, subject to confirmation of its availability; re-location/intensification of the existing business; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the site's location within a Conservation Area (albeit a very small portion of the site is so affected); proximity to one or more Listed Buildings; and a proximity to a Wildlife site. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is suitable for employment development as it is located within the settlement boundary and is a protected employment site (intensification - subject to appropriate design or replacement of the existing business if they relocate). This is subject to confirmation of the sites availability, achievability and viability; and suitable assessment and management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the site's location within a Conservation Area (albeit a very small portion of the site is so affected); proximity to one or more Listed Buildings; and a proximity to a Wildlife site. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
ELL015	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Not Available	The site has been submitted through the 'call for sites' for an alternative use and within this submission the landowner/developer has specified that it is only available for this alternative use. Therefore information gathered for the purposes of this study suggests that the site is not available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Other employment areas exist within smaller settlements and in some rural locations and these will support additional demand and provision. Outside of these areas, there is a traditional dependence on agriculture and related sectors, therefore the formation of new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not considered suitable for residential development as it is located adjacent to but outside the development boundary and is therefore contrary to policy. Development is also contrary to policy as the site forms part of a Wildlife Site. Other constraints include the presence of Veteran Trees and Tree Preservation Orders within the site and within 30m of site boundary as well as the site's proximity to a Conservation Area and several Listed Buildings. The ability to establish a safe highway access would be dependent on highway comments.	Rejected	The sites availability; achievability and viability are unknown. Furthermore the site is not considered suitable for employment development as it forms part of a wildlife site. Additionally, it is located within proximity of a conservation area and a number of listed buildings; and the ability to establish a safe highway access would be dependent on highway comments.

ELL019	Land south of Canal, Ellesmere	Ellesmere	4.26	128	1.70	An irregularly shaped, linear agricultural field located between the Shropshire Union Canal and Birch Road.	To the south, east and west (beyond the canal) are agricultural fields. The field to the west (beyond the canal) was allocated for development within the SAMDev Plan and has recently achieved outline planning permission for a mixed use development. To the north is a developed area containing a number of buildings in use as dwelling/businesses. To the north east is the marina.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside (separated by the canal) from the settlement boundary. As such open market residential development would be contrary to policy. However the site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to establish an appropriate highway access into the site and from the site into the wider network is subject to highway approval. The site is adjacent to a conservation area and listed buildings. Therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site also contains a number of Veteran Trees. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Additionally the site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside (separated by the canal) from the settlement boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to establish an appropriate highway access into the site and from the site into the wider network is subject to highway approval. The site is adjacent to a conservation area and listed buildings. Therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site also contains a number of Veteran Trees. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Additionally the site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ELL020	Land west of Grange Road, Ellesmere	Ellesmere	4.69	141	1.88	Irregularly shaped greenfield site in agricultural use to the north of Ellesmere.	Some scattered mature residential uses on Grange Road to the east. An agricultural fields (pasture) (allocated for employment use within the Local Plan) to the south. Further agricultural fields to the west and north.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement boundary. However, the portion of the settlement boundary to which it is adjacent is currently an agricultural field, albeit allocated for employment uses. As such open market residential development would be contrary to policy. However the site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide a suitable access to the site is subject to highway comments and the site is irregularly shaped and does not have defensible boundaries. Additionally, the site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There is also a Veteran Tree within 30m of the site boundary. Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Grade II Listed Building. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the built form of the settlement (it is adjacent to an agricultural field allocated for employment use). As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide a suitable access to the site is subject to highway comments and the site is irregularly shaped and does not have defensible boundaries. Additionally, the site is within 250m of a Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There is also a Veteran Tree within 30m of the site boundary. Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Grade II Listed Building. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ELL023X	At Grange Road	Ellesmere	0.04	N/A	N/A						
ELL024	Land East of Teal Drive, Ellesmere	Ellesmere	3.39	102	1.36	The site consists of two adjoining agricultural fields located to the north of Ellesmere.	Agricultural uses to the north and east. Residential to the west. Wooded area to the south.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located to the north of Ellesmere. It is located adjacent to but outside the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, much of the site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. This excludes a small area of the site which contains part of an adjacent amenity green space, which is not suitable for development unless suitable alternative provision can be made. Other constraints to the site include the need to demonstrate an appropriate access approved by the highways team. The site also contains and is in proximity to a number of trees subject to TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a conservation area and list building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. ELL019	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	The site has been represented for residential, employment or mixed use development within the 'call for sites' 2017. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Other employment areas exist within smaller settlements and in some rural locations and these will support additional demand and provision. Outside of these areas, there is a traditional dependence on agriculture and related sectors, therefore the formation of new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Achievable	Viability	The site has been represented for residential, employment or mixed use development within the 'call for sites' 2017. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Other employment areas exist within smaller settlements and in some rural locations and these will support additional demand and provision. Outside of these areas, there is a traditional dependence on agriculture and related sectors, therefore the formation of new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; viable and achievable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. The site is also subject to environmental and heritage constraint and the site's suitability is subject to appropriate assessment and management of the impact on these natural and historic assets. Specifically, the site contains a number of Veteran Trees; it is within 250m of a Wildlife Site, part of the site is within a Conservation Area and the site also contains 4 Listed Buildings. If suitable management and/or mitigation measures for these identified constraint were shown to be possible and acceptable, the sites development potential would also depend on appropriate changes to policies affecting this location and suitable management of other physical constraints present: the ability to establish an appropriate highway access into the site and from the site into the wider network is subject to highway approval. Other constraints may be informed by input from relevant service areas and infrastructure providers. The site's suitability is also subject to the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; viable and achievable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes, although the site is subject to environmental and heritage constraint and the site's suitability is subject to appropriate assessment and management of the impact on these natural and historic assets. Specifically, the site contains a number of Veteran Trees; it is within 250m of a Wildlife Site and part of the site is within a Conservation Area and the site also contains 4 Listed Buildings. If suitable management and/or mitigation measures for these identified constraint were shown to be possible and acceptable, the sites development potential for other forms of employment development would also depend on appropriate changes to policies affecting this location and suitable management of other physical constraints present: the ability to establish an appropriate highway access into the site and from the site into the wider network is subject to highway approval. Other constraints may be informed by input from relevant service areas and infrastructure providers. The site's suitability is also subject to the outcome of a visual impact and landscape sensitivity assessment.
ELL020	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access to the site; the irregular shape of the site and its development boundaries; and the sites proximity to a Wildlife Site, a Veteran Tree and a Listed Building. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) specifically the sites proximity to a Wildlife Site, a Veteran Tree and a Listed Building. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
ELL023X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
ELL024	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment - This excludes a small area of the site which contains part of an adjacent amenity green space, which is not suitable for development. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment - This excludes a small area of the site which contains part of an adjacent amenity green space, which is not suitable for development. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment - This excludes a small area of the site which contains part of an adjacent amenity green space, which is not suitable for development. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
ELL024b	Land East of Teal Drive (Parcel A), Ellesmere	Ellesmere	1.51	45	0.60	The site consists of an agricultural field located to the north of Ellesmere.	Agricultural uses to the north and east. Residential to the west. Wooded area to the south.	Not Suitable	The site is located to the north of Ellesmere. It is located adjacent to but outside the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore, the site does not have a road frontage, it is therefore dependent on the development of an adjacent site (albeit in the same ownership) to provide an access - the suitability of any future access is subject to highway approval. As a result in isolation the site is unsuitable for development.	Not Suitable	The site is located to the north of Ellesmere. It is located adjacent to but outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site does not have a road frontage, it is therefore dependent on the development of an adjacent site (albeit in the same ownership) to provide an access - the suitability of any future access is subject to highway approval. As a result in isolation the site is unsuitable for development.
ELL025	Land at Scott's Victoria Garage, Scotland Street, Ellesmere	Ellesmere	0.25	7	0.10	Garage site consisting of a garage building and forecourt with rear parking and ancillary vacant land.	To the north are residential dwellings. To the south is an area of vacant scrubland with Outline Planning Permission for a medical centre. To the east are residential dwellings and shops on the road frontage and underused buildings and grassland to the rear of the frontage.	Not Suitable	The site is not currently suitable for development as it is predominantly located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, highways would need to establish if the existing access to the site off Scotland Street is appropriate or if an alternative access is possible. There is potential contamination on the site, which would need to be suitably assessed and mitigated. The site is located within the Ellesmere Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of numerous Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is not currently suitable for development as approximately 2/3 of this site is located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, highways would need to establish if access to the site off Scotland Street is appropriate or if an alternative access is possible. There is potential contamination on the site, which would need to be suitably assessed and mitigated. The site is located within the Ellesmere Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
ELL026	Land off Elson Rd, Ellesmere	Ellesmere	12.12	364	4.85	A series of agricultural fields to the west of Ellesmere.	Land to the east consists of existing residential development and land with Planning Permission for a residential development. To the north is a ribbon of residential development along Elson Road. To the south and west are agricultural fields.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is adjacent to but outside the settlement development boundary for Ellesmere. Therefore open market residential development would be contrary to policy. However the site, excluding the small area located within flood zones 2 and/or 3, may have long term potential subject to appropriate changes to policy and management of any physical, heritage and environmental constraints. The site contains several TPO's and is in proximity to a number of TPO's and veteran trees, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is adjacent to but outside the settlement development boundary for Ellesmere. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site, excluding the small area located within flood zones 2 and/or 3, may have long term potential subject to appropriate changes to policy and management of any physical, heritage and environmental constraints. ELL024b	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. ELL028	Ellesmere Business Park Phase 2, Oswestry Road, Ellesmere	Ellesmere	6.15	185	2.46	An employment allocation to the north of an existing employment site.	To the south is an existing employment site. To the west and north are agricultural fields. To the east is an area of open space and housing.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within the settlement development boundary, however it is allocated for employment uses. Therefore open market residential development on the site would be contrary to policy. The site, outside the area located within flood zones 2 and/or 3, may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance, the site is within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use, subject to appropriate management of any physical, heritage and environmental constraints present. For instance, the site is within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ELL029	Land to the rear of Berwyn View, Ellesmere	Ellesmere	0.82	25	0.33	The site is a public open space within the settlement of Ellesmere.	Surrounding character is predominantly residential to the east; educational (and residential beyond) to the north; agricultural to the west; and agricultural (land allocated for mixed use development) to the south.	Not Suitable	The site is located adjacent to but outside the settlement development boundary. As such it is not suitable for open market residential development. Furthermore, the site comprises an identified outdoor sports facility. Development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site is therefore unsuitable for development.	Not Suitable	The site is located adjacent to but outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site comprises an identified outdoor sports facility. Development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site is therefore unsuitable for development.
GVH001X	Gravel Hill Farm, Gravels Hill	Gravels Hill near Shrewsbury	0.19	N/A	N/A						
HNN001	St Mary's Corner, Woodhill Road, Highley	Highley	0.24	7	0.09	The site is vacant grass land located on Woodhill Road, within the settlement boundary.	Surrounding uses include residential to the east; a row of residential properties and then open countryside to the south; a public house and open countryside to the west; and a public house, open countryside and a residential barn complex to the north.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Highley development boundary and within a predominantly residential area. Therefore the site is suitable for residential development. However, the site is within proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Highley development boundary, therefore the site is suitable for employment development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
HNN002	Land at Rhea Hall, Highley	Highley	0.30	9	0.12	Small undeveloped site adjacent to Rhea Hall and some distance from Highley. Access via narrow tracks.	Surrounding character is predominantly agricultural, with the exception of Rhea Hall to the north of the site and a caravan park to the east of the site (separated from the site by an agricultural field/estate grounds).	Not Suitable	The site is unsuitable for residential development as it is located in a rural location detached from the settlement boundary. Additionally the only current potential access to the site is down a narrow track. The suitability of this point of access is unclear and would be subject to approval by the highways team. Furthermore pedestrian and cycle links on this track are limited. The site is also adjacent to a listed building therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is located in a rural location detached from the settlement boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is detached from the built form of the settlement and is therefore not suitable for other forms of employment development. Additionally, the only current potential access to the site is down a narrow track. The suitability of this point of access is unclear and would be subject to approval by the highways team. Furthermore pedestrian and cycle links on this track are limited. The site is also adjacent to a listed building therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
HNN003X	Highley Garage	Highley	0.19	N/A	N/A						
HNN004	Land at Hazelwells Road, Highley	Highley	12.28	368	4.91	Large cornfield sloping up away from edge of settlement. The northern portion of the site contains a row of Pylons going east-west across site. The southern portion of the site contains an existing allotment which would likely represent the point of access to the site, unless it was to come forward in conjunction with the adjacent site (HNN017).	Land to the north, east and south is predominantly agricultural in character. Land to the west is predominantly residential in character (beyond a small strip of this agricultural field which has been promoted independently).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore, approximately 5% of the site is identified as an allotment. As such this element of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. If the policy position changes, the remainder of the site may become suitable subject to appropriate management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to the site is unclear and subject to highway approval. The site slopes up away from the settlement and is prominent. There are pylons on the site. The site is within 30m of several trees subject to Tree Preservation Orders. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Listed Building. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 5% of the site is identified as an allotment. As such this element of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. If the policy position changes, the remainder of the site may become suitable for other forms of employment subject to appropriate management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to the site is unclear and subject to highway approval. The site slopes up away from the settlement and is prominent. There are pylons on the site. The site is within 30m of several trees subject to Tree Preservation Orders. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Listed Building. ELL028	Currently Available	The site has been allocated for employment development. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been allocated for employment development. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been allocated for employment development. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is an allocated employment site, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. Suitability of the site for employment development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
ELL029	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is an allocated employment site, consequently open market residential development is contrary to policy. Furthermore, the site comprises an identified outdoor sports facility, development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). HNN006	Land to the South West of Highley	Highley	21.51	645	8.60	Pasture land consisting of a number of relatively flat grass fields separated by small hedges with mature trees. The site contains a small pond. Ground slopes gradually from Netherton Lane up to edge of the village to the east. The site is fairly open with views to the village.	Land to the south and west is predominantly agricultural in character. Land to the north consists of a new residential development. Land to the east is a mix of residential development and a couple of small agricultural fields.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site lies adjacent to but beyond the settlement development boundary, consequently residential development on the site is currently contrary to policy. However the site may have long term potential subject to appropriate policy changes and management of physical, environmental and heritage constraints. For instance, the ability to provide an appropriate access to the site is unclear. The sites western boundary is formed by Netherton Lane however this is a very rural road and its suitability to serve this site is uncertain and subject to highway approval. Furthermore a road access at this point would limit the sites east-west inter-connectivity with Highley. Furthermore the site is in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site lies adjacent to but beyond the settlement development boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment, subject to appropriate policy changes and management of physical, environmental and heritage constraints. For instance, the ability to provide an appropriate access to the site is unclear. The sites western boundary is formed by Netherton Lane however this is a very rural road and its suitability to serve this site is uncertain and subject to highway approval. HNN008	Land to the South East of Highley	Highley	8.24	247	3.30	A series of agricultural fields steeply sloping down from the edge of the settlement to the river valley. The site is situated on the eastern edge of the river valley.	Character to the north, east and south is predominantly agricultural. To the west is predominantly residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site lies adjacent to but beyond the settlement development boundary, consequently residential development on the site is currently contrary to policy. However the site may have long term potential subject to appropriate policy changes and management of physical, environmental and heritage constraints. For instance, the potential access roads are very narrow and rural in character, their ability to provide suitable access to the site would be subject to highway approval. The site also has a sloping topography away from the settlement towards the river valley, which could impact on the type and layout of any potential development. The site contains a listed building therefore development would be subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment being undertaken and the conclusions reached. Furthermore the site is also in proximity of one or more listed buildings and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site lies adjacent to but beyond the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment subject to appropriate policy changes and management of physical, environmental and heritage constraints. For instance, the potential access roads are very narrow and rural in character, their ability to provide suitable access to the site would be subject to highway approval and impact on the type of employment uses suitable. The site also has a sloping topography away from the settlement towards the river valley, this could represent a significant constraint for employment development which tends to favour larger flatter sites. Due to the sites proximity to residential development, it is only likely to be suitable for office based employment. The site contains a listed building therefore development would be subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment being undertaken and the conclusions reached. Furthermore the site is also in proximity of one or more listed buildings and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site.. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
HNN009	Land to the north west of Highley	Highley	1.30	39	0.52	The north western portion of an agricultural field. It is separated from the built form of the settlement by the south eastern portion of the field (assessed separately).	The surrounding character is primarily agricultural.	Not Suitable	The site is rejected as there is no obvious point of access at this time. Furthermore the site is separated from the built form of Highley by the remainder of the same agricultural field (promoted separately). It also projects into the countryside.	Not Suitable	The site is rejected as there is no obvious point of access at this time. Furthermore the site is separated from the built form of Highley by the remainder of the same agricultural field (promoted separately). It also projects into the countryside.
HNN010	Land to the south of Redstone Drive, Highley	Highley	2.77	83	1.11	Grazing and scrub land on edge of settlement, gradually sloping down away from settlement. A footpath across site. Whilst there is no direct access to the site, it is understood that a legal agreement exists between the owner of 79 Redstone Drive and the owner of this site.	Land to the west is primarily agricultural in character. Land to the north, south and east is primarily residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to (north, east and southern site boundaries) but outside the settlement's development boundary. Therefore residential development on the site would be contrary to policy. The site does have some long term potential subject to appropriate changes to policy and management of physical, heritage and environmental constraints; specifically, confirmation that vehicular, pedestrian and cycle access can be established. There is also a need for appropriate investigation of the former quarry/infill site. Additionally, the site is in proximity of one or more listed buildings and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to (north, east and southern site boundaries) but outside the settlements development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site does have some long term potential for other forms of employment, subject to appropriate changes to policy and management of physical, heritage and environmental constraints. Particularly confirmation that vehicular, pedestrian and cycle access can be established - the potential points of access and surrounding uses are likely to limit the potential employment uses on the site to office based. There is also a need for appropriate investigation of the former quarry/infill site. Additionally, the site is in proximity of one or more listed buildings and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

HNN006	Availability Unknown	The site is a broad location and Shropshire Council Officers have been unable to determine whether the site is available for development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	The site is a broad location and Shropshire Council Officers have been unable to determine whether the site is available for development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the site's proximity to ancient woodland, a wildlife site, a Conservation Area and several Listed Buildings. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the site's proximity to ancient woodland, a wildlife site, a Conservation Area and several Listed Buildings. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
HNN008	Availability Unknown	The site is a broad location and Shropshire Council Officers have been unable to determine whether the site is available for development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development as there is no obvious point of access at this time. Furthermore the site is separated from the built form of Highley by the remainder of the same agricultural field (promoted separately) and projects into the countryside.	Rejected	Availability, achievability and viability of the site are unknown. Furthermore the site is not considered suitable for employment development as there is no obvious point of access at this time. Furthermore the site is separated from the built form of Highley by the remainder of the same agricultural field (promoted separately) and projects into the countryside.
HNN010	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site is a broad location and Shropshire Council Officers have been unable to determine whether the site is available for development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
HNN013	Land at Woodhill Farm, Highley	Highley	0.54	16	0.21	Site is located to the north of Highley, on land directly south-east of Woodhill Farm and west of Woodhill Road.	Character to the north and west is predominantly agricultural, although there are also large rural dwellings on large plots. Character to the east is predominantly residential. To the south is a variety of land uses, including a public house, an area of hardstanding, a grassed area, two large rural dwellings and beyond these uses is an agricultural field.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site lies adjacent to but beyond the settlement development boundary. Consequently residential development on the site is currently contrary to policy. However the site may have long term potential subject to policy change and management of relevant constraints. Such as the site is in proximity of an ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site lies adjacent to but beyond the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment subject to policy change and management of relevant constraints. Such as the site is in proximity of an ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. HNN021	Off Netherton Lane, Highley	Highley	1.98	59	0.79	A rectangular site located to the south of Highley. The site is predominantly greenfield but does include access roads and car parking for the adjacent commercial units. There is also an area which was subject to previous quarrying and subsequent landfill use.	Immediate character to south and east is predominantly commercial beyond which it is agricultural. Character to the north and west is predominantly agricultural. Character to the north east is residential.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Highley development boundary. As such the principle of residential development on the site is established. Suitability is subject to appropriate management of the physical, heritage and environmental constraints. For instance part of the site was subject to previous quarrying and subsequent landfill uses, this will require due consideration. The site is adjacent to existing commercial units. The relationship between these units and any residential development on this site will require due consideration. The site contains and is in proximity of trees subject to TPO protection, development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Highley development boundary. As such the principle of employment development on the site is established. Suitability is subject to appropriate management of the physical, heritage and environmental constraints. For instance part of the site was subject to previous quarrying and subsequent landfill uses, this will require due consideration. The site is adjacent to existing commercial units. The relationship between these units and any residential development on this site will require due consideration. The site contains and is in proximity of trees subject to TPO protection, development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
JKD001	Land to north of The Woodlands, Jackfield, Broseley	Jackfield, Broseley	0.64	19	0.26	Densely wooded site located to the north east of Jackfield near to the Jackfield Tile Museum.	Surrounding character is a mix of residential, to north west and south and agricultural/woodland and a leisure to the west.	Not Suitable	The site is located adjacent to but outside the development boundary. As such, open market residential development is contrary to policy. Furthermore, the site is heavily wooded and these trees are subject to a group TPO protection, as such it is not possible to develop the site without resulting in an unacceptable harm to these trees. Additionally, the site is located within a conservation area and a world heritage site, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also within proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The ability to provide an appropriate access to the site is subject to highway approval.	Not Suitable	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is heavily wooded and these trees are subject to a group TPO protection, as such it is not possible to develop the site without resulting in an unacceptable harm to these trees. Additionally, the site is located within a conservation area and a world heritage site, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also within proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The ability to provide an appropriate access to the site is subject to highway approval.
JKD002	Land off Calcutts Road, Jackfield, Broseley	Jackfield, Broseley	0.39	12	0.16	The site consists of a single residential dwelling and its extensive curtilage.	Surrounding character is a mix of commercial and residential.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Broseley development boundary. Therefore the site is suitable for development subject to management of any physical, heritage and environmental constraints present. For instance the site contains a wooded strip along its southern boundary which is subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also located within a world heritage site and a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. HNN018	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development as it is in an isolated location and thus development would be contrary to policy.	Rejected	Availability, achievability and viability of the site are unknown. However the site is located in an isolated location distant from any settlements. As such employment development is limited to small scale rural enterprise and diversification schemes. As the site is in an isolated location it is not considered to have any future potential for other forms of employment development.
HNN019	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the site's proximity to a number of trees that are subject to Tree Preservation Orders and its proximity to a Conservation Area. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is not currently suitable for development as it is located in open countryside; consequently employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment development, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the site's proximity to a number of trees that are subject to Tree Preservation Orders and its proximity to a Conservation Area. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
HNN021	Currently Available	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but it is understood that there remains development interest; the site is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but it is understood that there remains development interest; the site is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. JKD003	The Rock Metal Works, Calcutts Road, Jackfield, Broseley	Jackfield, Broseley	1.43	43	0.57	The site consists of the Rock Metal Works Site (a protected employment site) and its associated landscaping.	Surrounding character is a mix of commercial, residential, agricultural and woodland.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is a protected employment site. As such residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is an existing employment site and may be subject to contamination which will require due consideration. The site is adjacent to another protected employment site, this will require due consideration and may require appropriate buffering. Much of the site is located within a world heritage site and conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.	Currently Suitable - Subject to Further Detailed Assessment	The site is a protected employment site. As such employment development is suitable in principle. Suitability is subject to management of any physical, heritage and environmental constraints present. For instance the site is an existing employment site and may be subject to contamination which will require due consideration. The site is adjacent to another protected employment site, this will require due consideration and may require appropriate buffering. Much of the site is located within a world heritage site and conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.
JKD004	Land off Ironbridge Road, Jackfield, Broseley	Jackfield, Broseley	1.69	51	0.68	The site consists of an agricultural field located to the east of Broseley.	Character to the west is predominantly residential. Character to the north is a mix of residential and agricultural. Character to the east and south is predominantly agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to the site is subject to highway approval. The site is in proximity of a world heritage site and conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of a tree subject to TPO protection, therefore Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to the site is subject to highway approval. The site is in proximity of a world heritage site and conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.
LCA001	Land adjacent to Fabric Cottages, Longford, Market Drayton	Longford near Market Drayton	3.17	95	1.27	The site consists of a series of small agricultural fields located between the settlement of Longford and a protected employment allocation (the Muller/Culina Site), which is located to the west of Market Drayton.	Character to the east and west is predominantly agricultural. Character to the north is residential, beyond which it is agricultural. Character to the south is commercial.	Not Suitable	The site is located adjacent to but outside the Market Drayton development boundary. However the site is also located adjacent to the built form of the village of Longford. The site is the entirety of the gap between Longford and Market Drayton. As such open market residential development is contrary to policy and is not considered to have long term potential.	Not Suitable	The site is located adjacent to but outside the Market Drayton development boundary. However the site is also located adjacent to the built form of the village of Longford. The site is the entirety of the gap between Longford and Market Drayton. As such suitable employment development is limited to small scale rural enterprise and diversification schemes. Due to the sites location, it is not considered to have long term potential for other forms of employment development.
LUD004	Lower Barns Farm, South of Ludlow	Ludford near Ludlow	62.72	1882	25.09	The site is south of the built form and the development boundary of Ludlow. The River Teme wraps around the border on the north and east side. There are some minor roads running through the site between the retail stores and the dwellings, from east to west. The site is otherwise all agricultural, with the only access off Overton Road to the west	The site is partly surrounded by the River Teme, with the built form of Ludlow to the north beyond the river. Otherwise the site is surrounded by agricultural land, with some residential the west side on Lower Barns Road, with a water reclamation works to the south	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore a small portion of the site is located in Flood Zones 2 and/or 3, these elements of the site will only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Ultimately the site is not considered to have long term potential for development as it is separated from the settlement of Ludlow by the River Teme, which represents a significant physical barrier and is also an identified wildlife site. The site is therefore more closely associated with the settlement of Ludford, which is considered countryside, the site is also of a scale that is disproportionate to this settlement. Additionally, the only potential road connectivity is that at Lower Barns Road, which is a very narrow road which serves housing at Ludford, this is not likely to be considered appropriate to serve the development of this site - the ability to provide an appropriate access is subject to approval by the highways authority. The site is also in proximity to a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of a Wildlife Site and a RIG, therefore development is subject to an assessment of the impact on these locally designated sites. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is within 30m of trees subject to a Tree Preservation Order. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within 300m of a Scheduled Monument, a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore a small portion of the site is located in Flood Zones 2 and/or 3, these elements of the site will only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Ultimately the site is not considered to have long term potential for other forms of employment development as it is separated from the settlement of Ludlow by the River Teme, which represents a significant physical barrier and is also an identified wildlife site. The site is therefore more closely associated with the settlement of Ludford, which is considered countryside, the site is also of a scale that is disproportionate to this settlement. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
LUD010	Land at west of Overton Road, Ludlow	Ludford near Ludlow	5.88	176	2.35	Site situated on Overton Road approximately 0.5km to the south of Ludlow development boundary. Site comprises open agricultural land adjacent to Overton Road along its Eastern boundary. Northern and Western boundaries are predominantly agricultural whilst to the south is a band of deciduous woodland. Site slopes slightly upwards away from, Overton Rd.	Undulating agricultural. Well-separated dwellings to northern and southern boundaries of the site. Planning permission granted 26 May 2017 in the field to the west of the site for the erection of 4 glamping units for holiday accommodation.	Not Suitable	The site is distant from the settlement of Ludlow, being more closely associated with the rural settlement of Ludford - classified as countryside. Consequently, open market residential development on the site is currently contrary to Local Plan policy. Due to this rural location; its separation from the settlement of Ludlow; and the size of the site in comparison to the existing settlement of Ludford it is not considered to have long term potential for development.	Not Suitable	The site is distant from the settlement of Ludlow, being more closely associated with the rural settlement of Ludford - classified as countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. Due to this rural location; its separation from the settlement of Ludlow; and the size of the site in comparison to the existing settlement of Ludford it is not considered to have long term potential for other forms of employment development.

JKD003	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been the subject of a current Planning Application for a relevant use, and it is understood that there remains development interest; the site is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been the subject of a current Planning Application. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However much of the site is a protected employment site, consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is located within a world heritage site and a conservation area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment). However, suitability is subject to appropriate management of the physical, environmental; or heritage constraints present. Specifically the site is located within a world heritage site and a conservation area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
JKD004	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. Due to this rural location; its separation from the settlement of Ludlow it is not considered to have long term potential for other forms of employment development. Furthermore, the ability to provide an appropriate access to and into the site is subject to Highways Approval.
LUD001	Elm Lodge, Fishmore, Ludlow	Ludlow	5.40	162	2.16	Currently a 9 hole golf course to the north of Ludlow, the site lies just north of the A49 directly east of the River Corve.	The built form of Ludlow lies south-east of the site across the A49. The site is surrounded on its north, east and west side by agricultural land, with the A49 directly to the south. Elm Lodge B&B sits just north of the site, Acorn Place B&B just to the east and a haulage yard to the north east.	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site is in the majority an identified outdoor sports facility. As such it is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Part of the site is also located within Flood Zones 2 and/or 3, this area of the site would only be considered to have development potential if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere.	Not Suitable	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is in the majority an identified outdoor sports facility. As such it is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Part of the site is also located within Flood Zones 2 and/or 3, this area of the site would only be considered to have development potential if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere.
LUD005	21 New Street, Ludlow	Ludlow	0.06	5	0.03	Large plot containing a single residential dwelling.	Primarily residential. Adjacent similar sized plot contains 9 apartments.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Ludlow development boundary and is considered to represent a suitable location for residential development, subject to appropriate management of any physical, heritage and environmental constraints. For instance, the site is located within proximity of one or more listed buildings and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Ludlow development boundary, due to the primarily residential nature of the area, it is likely that only office based employment would be considered to represent appropriate. Suitability is subject to appropriate management of any physical, heritage and environmental constraints. For instance, the site is located within proximity of one or more listed buildings and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
LUD006X	Sheep Sales Field Linney	Ludlow	0.08	N/A	N/A						
LUD007X	The Gospel Hall, Clee View	Ludlow	0.10	N/A	N/A						
LUD012	Sheep Sales Field Linney, Ludlow	Ludlow	0.42	13	0.17	An undeveloped field with frontage to Linney (road) to the east of the plot. Adjacent plots to north and south have long-standing residential development whilst the land remains agricultural to the west.	To north, south and east adjacent to existing development within the conservation area which is tightly packed based on medieval plot patterns. To west (rear of plot) is undeveloped land overlooking the flood meadows towards the Rivers Corve and Teme.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. Consequently, open market residential development on the site is currently contrary to Local Pan policy. Furthermore, around 60% of the site is within Flood Zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is unlikely to have capacity for 5 or more dwellings, however it does theoretically has long term potential for residential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance access to the site would be from the Linney which is a narrow street and the likely site access is opposite a bend in the road, the suitability of such an access would be subject to approval by the Highway Authority. The site is located within a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, around 60% of the site is within Flood Zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is unlikely to have capacity for 500m2 of employment floorspace, however it does theoretically has long term potential for office based employment development (likely to be the most suitable form of employment given the setting of the site) subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance access to the site would be from the Linney which is a narrow street and the likely site access is opposite a bend in the road, the suitability of such an access would be subject to approval by the Highway Authority. The site is located within a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.

Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not considered suitable for residential development as it is located in the countryside and separated from the built form of the settlement of Ludlow.	Rejected	The sites availability, achievability and viability is unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any necessary further viability assessments. However the site is not considered suitable for employment development, other than small scale rural enterprise and diversification schemes, as it is located in the countryside and separated from the built form of the settlement of Ludlow.
LUD051	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for development and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. LUD005	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; likely to become available; achievable; and viable (subject to any further necessary viability assessment) for residential development. Suitability of the site for residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered suitable for office based employment, other forms of employment are less likely to be appropriate given the predominantly residential nature of the area. Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Therefore the site has long term potential, subject to confirmation of the sites availability, achievability and viability; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
LUD006X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
LUD007X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered to be available, achievable and viable for development. However it is not considered suitable as it is located adjacent to but outside the development boundary, consequently, open market residential development on the site is currently contrary to Local Plan policy. Furthermore, around 60% of the site is within Flood Zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is unlikely to have capacity for 5 or more dwellings, however it does theoretically have long term potential for residential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present; and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The sites availability, achievability and viability are unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives; and any necessary viability assessments. However as the site is located adjacent to but outside the development boundary, suitable employment uses are limited to small scale rural enterprise and diversification schemes. Furthermore, around 60% of the site is within Flood Zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is unlikely to have capacity for 500m2 of employment development, however it does theoretically have long term potential for forms of employment development other than small scale rural enterprise and diversification schemes, subject to confirmation of its availability, achievability and viability; appropriate policy changes and management of any physical, heritage and environmental constraints present; and the outcome of a visual impact and landscape sensitivity assessment. A particular constraint in this location is the setting which is likely to limit the appropriate forms of employment to those which are office based. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

LUD019	Rocks Green, Ludlow	Ludlow	12.90	387	5.16	A site that is formed of two adjoining blocks, the smaller element of which, adjacent to the A49 and Rock Green Road and the Dun Cow Road estate already has Outline permission for the erection of a food store and associated development which is currently occupied by an informal traveller site. The larger element of the site which adjoins the smaller element is formed of two large fields located behind the ribbon development to the northern side of Rocks Green Rd. In nature this larger element is agricultural and slopes reasonably gently away from Rock Green with views across open countryside. The site falls outside of the current development boundary.	The site lies to the east of the A49 which effectively forms the development boundary for Ludlow although this has been breached in this location by the Dun Cow Road estate. The site would form a considerable extension to the development formed by that scheme to the northern side of Rock Green Road. With the exception of Rock Green village centred on the Nelson public house and the existing ribbon development that would lie between Rock Green Rd and any scheme the surrounding area is agricultural with far reaching views to the north/north west.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Part of the site has planning permission for a food store. The remainder of the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration. Additionally, the sites topography means that it is visually prominent.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Part of the site has planning permission for a food store. The remainder of the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration. Additionally, the sites topography means that it is visually prominent.
LUD022	Morris Bufton Galdeford, Ludlow	Ludlow	1.36	41	0.55	At the Gravel Hill end this site is currently used as a sales site for trailers and occupies land between the railway line and well established development along Lower Galdeford. The site is long and quite narrow in places with access at either end onto Lower Galdeford and Gravel Hill. The site slopes markedly downwards from Gravel Hill.	The site is surrounded on three sides by predominantly residential development with some Office/Commercial development including the telephone exchange on Lower Galdeford. The fourth side is formed by the railway line which lies within a cutting at this point.	Currently Suitable - Subject to Further Detailed Assessment	The site is within the Ludlow development boundary so the principle of development is accepted subject to management of any physical, heritage and environmental constraints. These include consideration of any loss of employment. The site is in proximity of a Scheduled Monument, Conservation Area and one or more Listed Buildings, therefore development is subject to an assessment of impact on the significance of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 500m of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. If the consent for a retail unit on part of the site is implemented, this will need to be excluded from the developable area.	Currently Suitable - Subject to Further Detailed Assessment	The site is within the Ludlow development boundary so the principle of development is accepted subject to material considerations. The site is in proximity of a Scheduled Monument, Conservation Area and one or more Listed Buildings, therefore development is subject to an assessment of impact on the significance of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 500m of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. If the consent for a retail unit on part of the site is implemented, this will need to be excluded from the developable area.
LUD024	Land at Weeping Cross Lane, Ludlow	Ludlow	0.78	23	0.31	A flat, roughly square plot of land facing onto Weeping Cross Lane to the east. The site is currently occupied by a Tyre Replacement outlet and Van Hire depot. Currently designated as "Protected Employment Land".	The surrounding area is of a very mixed nature comprising some residential to the south, primary school playing fields to the west and fire station to the north. The site is bounded to the east by Weeping Cross Lane on the opposite side of which is a large business unit.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is protected employment land within the development boundary and as such residential development is contrary to policy. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is within proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also adjacent to a scheduled monument and within proximity of a conservation area and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is protected employment land within the development boundary and as such employment development is acceptable in principle, subject to management of any physical, heritage and environmental constraints present. For instance the site is within proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. LUD027	Land rear of Steventon New Road, Ludlow	Ludlow	0.55	16	0.22	The site is formed by a parcel of land to the rear of one and two storey dwellings on the north east side of Steventon New Road. The site is currently used as open space and a children's play area which for the main part is reasonably flat but then slopes upwards to the north east to form a railway embankment.	To the north west, south west and south east the site is surrounded by residential development. The railway line comprises the remaining site boundary.	Not Suitable	The site is within the Ludlow development boundary. However, approximately 35% of the site is identified children's play area. As such this element of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site does not have vehicular access so is unsuitable for development.	Not Suitable	The site is within the Ludlow development boundary. LUD019	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. The site (excluding that area with permission for a food store), may have long term potential, subject to appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, as the site is located in the countryside appropriate employment development is limited to small scale rural enterprise and diversification schemes. The site (excluding that area with permission for a food store), may have long term potential for other forms of employment, subject to confirmation of its availability, achievability and viability; appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.
LUD022	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	Elements of the site are subject to recent development proposals and/or are occupied. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. The site is a broad location and Shropshire Council Officers have been unable to determine whether the site is available for development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives. Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. The site is currently suitable for development as it is located within the development boundary where the principle of development is accepted subject to management of any physical, heritage and environmental constraints. These include the implications of any loss of employment; and the site's proximity to a SSSI, a Scheduled Monument, a Conservation Area and several Listed Buildings. Additionally, if the consent for a retail unit on part of the site is implemented, this will need to be excluded from the developable area.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. The site is currently suitable for development as it is located within the development boundary where the principle of development is accepted subject to management of any physical, heritage and environmental constraints. These include the site's proximity to a SSSI, a Scheduled Monument, a Conservation Area and several Listed Buildings. Additionally, if the consent for a retail unit on part of the site is implemented, this will need to be excluded from the developable area. Long term potential is also subject to confirmation of its availability, achievability and viability.
LUD024	Availability Unknown	Shropshire Council Officers understand that the site is either not available or not available for this form of development. Therefore information gathered for the purposes of this study suggests that the site is not available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. LUD028	Land off Fishmore Road, Ludlow	Ludlow	3.86	116	1.54	A fairly flat site in agricultural use to the north of Ludlow on the northern side of the A49 and therefore outside of the development boundary. The site is bounded to the west by the access road to Redhill and to the south and east by Fishmore Road. The site is bordered to the north by other fields and a bed and breakfast establishment.	The surrounding area is largely agricultural in nature with widely dispersed dwellings adjacent to the site. The site lies just to the north of the A49, south of which the urban form of Ludlow starts to become apparent.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance, the ability to provide an appropriate access to and into the site is subject to highway approval. The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration. The site is also within 300m of a Listed Building, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance, the ability to provide an appropriate access to and into the site is subject to highway approval. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
LUD031X	Land adj. to Castle Meadow The Linney	Ludlow	0.08	N/A	N/A						
LUD032	Ludlow Town Football Club, Ludlow	Ludlow	2.82	85	1.13	The site is formed by a flat area of grass between the A49 (north of the site) and the rear of the Ludlow AFC Football Club stadium (south of the site)	To the west of the site the land use remains agricultural whilst immediately to the south/south west of the site is situated the Ludlow AFC football stadium. Separated from the site by an access road and row of trees residential development exists to the east of the site. To the north of the site sits the Bromfield Road acceleration lane forming a junction with the A49 Trunk Road	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore, much of the site comprises an outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site is also within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 30m of trees subject to TPOs. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Listed Building. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, much of the site comprises an outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site is also within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
LUD037	Land at Coronation Avenue/ Bromfield Road, Ludlow	Ludlow	0.59	18	0.24	A site situated to the north eastern side of the Bromfield Road/Coronation Avenue/Burway Lane Junction in Ludlow. The site is currently occupied by a variety of uses including a haulage yard, some large sheds and a residential dwelling. The site falls within the Development Boundary.	To the rear of the site (north east) is a small area of pasture land which in turn is bounded by the River Corve. To the north western boundary is a single residential dwelling which in turn is bordered by a Motor Vehicle Dealership (Ludlow Motors). To the south eastern corner of the site is a vehicle repair garage. The site is bounded to the west and south by Bromfield Road to its junction with Coronation Avenue and Burway Lane. To the opposite side of Bromfield Road is a builders yard and some pasture land.	Not Suitable	The site is within the Ludlow development boundary so the principle of development subject to material considerations is accepted in policy terms. However, the site is not currently suitable for development as approximately 73% of this site is located within Flood Zone 2. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is of limited capacity, and is primarily occupied by a single dwelling.	Not Suitable	The site is within the Ludlow development boundary so the principle of development subject to material considerations is accepted in policy terms. However, the site is not currently suitable for development as approximately 73% of this site is located within Flood Zone 2. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is of limited capacity, and is primarily occupied by a single dwelling.
LUD038	Current Hospital Site, Ludlow	Ludlow	1.22	36	0.49	The site is currently occupied by the Ludlow Hospital and the range of services that it provides. The site is formed of a number of buildings of varying age with associated car parking and some limited open space between the buildings. Due to the nature of the current use of the site there is the potential for some contamination.	The site is surrounded predominantly by established residential development and some local retail provision.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Ludlow development boundary so the principle of development is established in policy terms, subject to management of any physical, heritage and environmental constraints. For instance the site is currently in use as a Hospital, alternative provision of these services will need to be considered. The site also contains a Grade II Listed Building, as a result it is likely that only a development which involves the conversion of this building will be appropriate, furthermore development would be subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of a Conservation Area, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. LUD039X	Linney Wall Garden, Ludlow	Ludlow	0.09	N/A	N/A						
LUD040	Camp Lane, Ludlow	Ludlow	0.60	18	0.24	The site is a long (east-west - approx. 200m) narrow (north-south, approx. 20 m at its mid point) and follows the line of Camp Lane. The falls away from Camp Lane but is relatively level east-west. The site appears to be open space/garden in nature with views over pastureland to the River Teme to the south. The boundary to Camp Lane is skirted by a tall wall of historic character which has a single gated point of access adjacent to The Lodge.	Development to the northern side of Camp Lane is of a dense historic nature and is separated from the site by tall walls either side of Camp Lane which is a narrow road. To its southern/south western boundary the site looked downwards towards the River Teme. At either end of the site is a dwelling The Lodge to the west, Maryvale to the east. The site falls between two of the Town Gates (Mill and Dinham) and is close to the Town Wall. There are allotments to the south eastern end of the site.	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Additionally, the site is not suitable for development as it does not appear to have any form of access. The site is separated from Camp Lane by an attractive historic wall. It also contains and is likely to form part of the setting for a Scheduled Monument and two Listed Buildings. Consequently development is likely to lead to substantial harm to or total loss of significance of one or more designated heritage assets and as such is contrary to national policy. This site is therefore unsuitable for development.	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is not suitable for development as it does not appear to have any form of access. The site is separated from Camp Lane by an attractive historic wall. LUD028	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site, albeit these are somewhat distant from this site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site, albeit these are somewhat distant from this site. However, as the site is located in the countryside where appropriate employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of its availability, achievability and viability; appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
LUD031X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
LUD032	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. Furthermore, much of the site comprises an outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.	Rejected	The site is available. Achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. The site is located in the countryside, as such the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. However, much of the site comprises an outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.
LUD037	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. LUD041	Land to the North of Sheet Road Development Site, Ludlow	Ludlow	26.01	780	10.40	This predominantly level site comprises a large tract of open agricultural land directly to the north of the Ludlow Eco park Business Estate and Park and Ride. The site is bounded to the west by the A49. It is immediately adjacent to the Development Boundary.	To the north and east the site is bounded by agricultural land and associated development. To the south is the Ludlow Park & Ride car park. To the immediate west of the site is the A49 on the opposite side at this point being employment development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. There is potential to provide an access via the existing Park and Ride site or through the proposed development at the Eco Park. The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration. The site is within 250m of a Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 30m of trees subject to TPOs, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of one or more Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. There is potential to provide an access via the existing Park and Ride site or through the proposed development at the Eco Park. The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration. The site is within 250m of a Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 30m of trees subject to TPOs, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of one or more Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
LUD042	Adj. Linney House, Ludlow	Ludlow	0.58	17	0.23	A heavily wooded greenfield site located to the west of Ludlow.	Character to the north and west is predominantly agricultural. Character to the south is woodland. Character to the east is primarily residential (many on large plots).	Not Suitable	The majority of the site is located adjacent to but outside the development boundary. Therefore residential development is contrary to policy. Approximately 25% of the site is located within flood zone 2, around 20% of the site is located in flood zone 3, elements of the site within either flood zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is heavily wooded and these trees are subject to TPO protection - development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. Due to the extent and number of these trees, it is not considered that the site has any long term potential. The site is also located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also in proximity of a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The majority of the site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 25% of the site is located within flood zone 2, around 20% of the site is located in flood zone 3, elements of the site within either flood zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is heavily wooded and these trees are subject to TPO protection - development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. Due to the extent and number of these trees, it is not considered that the site has any long term potential. The site is also located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also in proximity of a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
LUD043	West of Burway Lane, Ludlow	Ludlow	0.58	17	0.23	The site, to the south of Burway Lane, is formed by the northern part of a field on the edge of Ludlow outside but adjacent to the development boundary. The field is in agricultural use and slopes gently downwards NE-SW towards the R.Teme	To the opposite side of Burway Lane are the playing fields of Ludlow CoE School and the rear of the leisure centre. There is a row of dwellings along Burford Lane to the east of the site whilst to the west and south is agricultural land.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. These include the fact that the potential access road is very narrow, its suitability to serve the development of this site is subject to highway approval. The site is in proximity to a SSSI, meaning development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of a Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Listed Building and a Conservation Area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to relevant changes to policy and management of any physical, heritage and environmental constraints. These include the fact that the potential access road is very narrow, its suitability to serve the development of this site is subject to highway approval. The site is in proximity to a SSSI, meaning development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of a Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. LUD041	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viable	Site was promoted through the call for sites. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access into the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. Such constraints include the ability to provide an appropriate access into the site.
LUD042	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However the site is not suitable for development as approximately 25% of the site is located within flood zone 2, (and around 20% of the site is located in flood zone 3), elements of the site within either flood zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is heavily wooded and these trees are subject to TPO protection. Due to the extent and number of these trees, it is not considered that the site has any long term potential.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However the site is not suitable for development as approximately 25% of the site is located within flood zone 2, (and around 20% of the site is located in flood zone 3), elements of the site within either flood zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is heavily wooded and these trees are subject to TPO protection. Due to the extent and number of these trees, it is not considered that the site has any long term potential.
LUD043	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. LUD045	Coronation Ave, Ludlow	Ludlow	4.18	126	1.67	A low-lying area of land to the northwest of Ludlow town centre that is adjacent to Coronation Avenue extending behind the dwellings on Burway Lane. The site is currently used for grazing of livestock. The site is made up of three fields and appears flat. The site lies adjacent to the development boundary and within the conservation area.	The site is fronted by Coronation Avenue to the opposite side of which is a veterinary surgery and a builders merchant. The site extends behind the dwellings on Burway Lane near the junction with Coronation Avenue and Bromfield Rd. The remaining parts of the site are bound by agricultural uses	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore, part of the site (approx. 22%) along the eastern and southern boundaries is within Flood Zones 2 and/or 3, this element of the site the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance, the ability to provide an appropriate access is subject to highway approval. The site is within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of one or more Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 500m of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. A such employment development is limited to small scale rural enterprise and diversification schemes. However, part of the site (approx. 22%) along the eastern and southern boundaries is within Flood Zones 2 and/or 3, this element of the site the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment, subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance, the ability to provide an appropriate access is subject to highway approval. The site is within a Conservation Area therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within 300m of one or more Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 500m of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
LUD046	North Farm, West of Ludlow	Ludlow	0.20	6	0.08	A parcel of land along the north side of Wigmore Rd near the junction of Lower Wood Rd. The site is currently used as a field for grazing horses. The south and east sides are bound by hedging. The field slopes down gently to the NE which is bounded by mature woodland. A former Observation Bunker is located within the site which is mainly underground. The site is entirely within the Whitcliff Common Local Wildlife Site.	The site has woodland to its eastern side. Otherwise the site is surrounded by a traditional field system. The Ludlow Conservation Area and Whitcliffe Common Reserve Local Wildlife site to its eastern side.	Not Suitable	The site is in an isolated location at some distance from the development boundary. Consequently, open market residential development on the site is currently contrary to Local Pan policy. Additionally, the site is within a Wildlife Site, therefore development is likely to lead to a significant adverse effect on this locally designated site and as such is contrary to policy. This site is therefore unsuitable for development.	Not Suitable	The site is in an isolated location at some distance from the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is within a Wildlife Site, therefore development is likely to lead to a significant adverse effect on this locally designated site and as such is contrary to policy. This site is therefore unsuitable for development.
LUD047	Land off Burway Lane, Ludlow	Ludlow	1.30	39	0.52	The site, to the south of Burway Lane, is formed by the northern part of a field on the edge of Ludlow outside but adjacent to the development boundary. The field is in agricultural use and slopes gently downwards NE-SW towards the R.Teme	To the opposite side of Burway Lane are the playing fields of Ludlow CoE School and the rear of the leisure centre. There is a row of dwellings along Burford Lane to the east of the site whilst to the west and south is agricultural land.	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore, the site does not appear to have a frontage onto the adopted element of Burway Lane. The suitability of the unadopted element to provide an access to this site is unclear, as is the capacity of the adopted element of Burway Lane to support access to the site - this would therefore be subject to highway approval. As the site does not have a road frontage it is not considered suitable for development.	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site does not appear to have a frontage onto the adopted element of Burway Lane. The suitability of the unadopted element to provide an access to this site is unclear, as is the capacity of the adopted element of Burway Lane to support access to the site - this would therefore be subject to highway approval. As the site does not have a road frontage it is not considered suitable for development.
LUD048	Land adjoining Ludlow Football Stadium, Ludlow	Ludlow	6.58	198	2.63	The site comprises a large between Burway Farm to the north and the Ludlow Football Club pitch to the south. The site is currently in agricultural use and is flat.	To the south lies the Ludlow Town Football Club Ground and the school playing fields whilst to the north are the buildings associated with Burway Farm. The western boundary is formed by the A49 to the opposite side of which is a small area of woodland between the A49 and Bromfield Rd. To the east is agricultural land.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance it is unclear whether the site has a road frontage. If the site fronts onto the A49 the suitability of providing a direct access onto this road would be subject to highway approval. If the site has access onto the Burway Farm access the suitability of this access to serve this site would also be subject to highway approval. The site also protrudes into the countryside and is distant from many of the services within the town. The site is also within 500m of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of a Listed Building, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment, subject to relevant changes to policy and management of any physical, heritage and environmental constraints. For instance it is unclear whether the site has a road frontage. If the site fronts onto the A49 the suitability of providing a direct access onto this road would be subject to highway approval. If the site has access onto the Burway Farm access the suitability of this access to serve this site would also be subject to highway approval. The site also protrudes into the countryside and is distant from many of the services within the town. The site is also within 500m of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. Furthermore, the site does not appear to have a frontage onto the adopted element of Burway Lane. The suitability of the unadopted element to provide an access to this site is unclear, as is the capacity of the adopted element of Burway Lane to support access to the site - this would therefore be subject to highway approval. As the site does not have a road frontage it is not considered suitable for development.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. As the site is located in the countryside, the only form of employment appropriate on the site is limited to small scale rural enterprise and diversification schemes. However, the site does not appear to have a frontage onto the adopted element of Burway Lane. The suitability of the unadopted element to provide an access to this site is unclear, as is the capacity of the adopted element of Burway Lane to support access to the site - this would therefore be subject to highway approval. As the site does not have a road frontage it is not considered suitable for development.
LUD048	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access into the site and consideration of whether there is an appropriate relationship between development on the site and the wider settlement (it is distant from many of the services and facilities in the town).	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. As the site is located in the countryside, the only form of employment appropriate on the site is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment development, subject to confirmation of its availability, achievability and viability; appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access into the site and consideration of whether there is an appropriate relationship between development on the site and the wider settlement (it is distant from many of the services and facilities in the town).

LUD049	Site A Land at Burway Farm, Ludlow	Ludlow	1.24	37	0.50	A small field lying between the farm buildings associated with Burway Farm and the A49. The site lies to the north of the access lane to Burway Farm which comes directly off the A49. The site is flat.	The east of the site is bound by the A49 to the opposite side of which is an area of woodland. To the south and the north of the site are the buildings associated with Burway Farm. To the north of the site is agricultural land.	Not Suitable	The site is located approximately half a kilometre from the Ludlow development boundary in a remote location and is not well related to the built form of the town. Consequently, open market residential development is currently contrary to Local Plan policy and the site is considered to be unsuitable for development. Furthermore, the ability to provide an appropriate access to and into the site is subject to highway approval.	Not Suitable	The site is located approximately half a kilometre from the Ludlow development boundary in a remote location and is not well related to the built form of the town. As such employment development is limited to small scale rural enterprise and diversification schemes. However, due to the sites remote location it is not considered that it has long term potential for other forms of employment development. Furthermore, the ability to provide an appropriate access to and into the site is subject to highway approval.
LUD050	Land at Elm Lodge, Ludlow	Ludlow	0.80	24	0.32	A haulage yard located to the north of the A49 and Ludlow.	Character to the north and east is predominantly agricultural. Character to the south and east is predominantly open space. Elm Lodge B&B sits just west of the site and Acorn Place B&B just to the east.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such residential development is contrary to policy. Furthermore, Approximately 35% of the site comprises an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability for the existing (or any new access) to serve the development of the site is subject to highway approval. The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, Approximately 35% of the site comprises an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability for the existing (or any new access) to serve the development of the site is subject to highway approval. The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration.
LUD052	South of Eco Park, The Sheet, Ludlow	Ludlow	4.87	146	1.95	The site consists of part of an agricultural field (the remainder of the field has been allocated for employment development) to the east of the A49 and south of Sheet Road/the Eco Park.	Character to the south is predominantly agricultural. Character to the east is a mix of residential and agricultural. Character to the north is a mix of employment and agricultural (land allocated for mixed use development). Character to the west is a mix of existing residential, employment and committed residential/allocated employment on agricultural land).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the development boundary. As such residential development is contrary to policy. The site may however have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval - it is most likely that this would be via the adjacent employment allocation, subject to this site being planned in such a way as to allowing this linkage to be provided. As the most appropriate access is via an employment allocation, the suitability of this access route to serve residential development and the implications for residential amenity will require consideration. The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration. The site is also in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may however have long term potential for other forms of employment development, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval - it is most likely that this would be via the adjacent employment allocation, subject to this site being planned in such a way as to allowing this linkage to be provided. As the most appropriate access is via an employment allocation, the suitability of this access route is subject too highway approval. The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration. The site is also in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
LUD053	Land north of Ledwyche Court, Ludlow	Ludlow	5.79	174	2.32	An agricultural field to the east of an existing mixed use allocation and a sub-station.	Character to the north and east is predominantly agricultural. Character to the south is a mix of residential and agricultural. Character to the west is a mix of agricultural (land allocated for mixed use development), employment and residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the development boundary. As such residential development is contrary to policy. Furthermore part of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. A part of the site (generally consistent with the area located within flood zones 2 and/or 3) is designated as a local wildlife site, consequently development in this element of the site and an appropriate buffer is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. Approximately half of the remaining site is identified for the provision of an attenuation pond associated with development on the adjacent mixed use allocation. The remainder of the site may have long term potential for development subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance, proximity to a local wildlife site. The ability to provide an appropriate access is subject to highway approval. The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration. The site slopes away towards the brook, this will require due consideration. The site is also adjacent to an electric sub-station, which will require due consideration. The site is also within proximity of a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the development boundary. LUD054	Land South of Sheet Road, The Sheet, Ludlow	Ludlow	3.55	107	1.42	Part of an agricultural field located to the east of the A49 and south of Sheet Road and the Eco Park employment site (allocated for employment development).	Character to the south and east is predominantly agricultural (pocket of housing to the east). Character to the west is a mix of housing and employment. Character to the north is employment and agricultural (allocated for mixed use development).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an existing employment allocation. As such residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration. The site is also in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is an existing employment allocation. As such employment development is consistent with policy. The site is therefore suitable for development, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site is separated from Ludlow by the A49 which represents a significant physical barrier, connectivity with the wider settlement of Ludlow requires due consideration. The site is also in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
LUD055	Sidney Road, Ludlow	Ludlow	0.35	11	0.14	The site consists of an area of amenity green space within a primarily residential area of Ludlow.	Surrounding character is predominantly residential.	Not Suitable	The site is located within the development boundary. However, the site comprises an identified amenity green space. Development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.	Not Suitable	The site is located within the development boundary. However, the site comprises an identified amenity green space. Development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.
MDR001	77 - 83 Shropshire Street, Market Drayton	Market Drayton	0.08	5	0.03	The site is a precinct of five retail units with residential / commercial units above together and external parking court to the rear.	The surrounding uses include residential, retail, office and public house. A high proportion of the retail units fronting the length of Shropshire Street are currently vacant.	Currently Suitable - Subject to Further Detailed Assessment	This site is a suitable location for residential development subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is within proximity of one or more listed buildings and a conservation area, as such development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	This site is a suitable location for employment development, however the nature of the employment use should be sympathetic to the amenity of the surrounding area. Suitability is also subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is within proximity of one or more listed buildings and a conservation area, as such development is subject to an assessment of impact on the significance of the setting of these heritage assets Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
MDR002	Car Sales Area, Salisbury Road, Market Drayton	Market Drayton	0.14	5	0.06	The site is a former scrap yard, now cleared and used as car sales area.	There is a garage across the road from the site. Other surrounding uses are primarily residential.	Currently Suitable - Subject to Further Detailed Assessment	The site is considered suitable for residential development. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance there is a TPO adjacent to the site, therefore development is subject to an assessment of impact on the protected tree(s) on/in proximity of the site in order to demonstrate how they can be safeguarded. Thus, the site is considered suitable for development in relation to this matter, subject to these safeguarding measures being deemed acceptable. Additionally the site is located within proximity of one or more listed buildings, consequently development is subject to an assessment of impact on the significance of the setting of this heritage asset(s). Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is considered suitable for employment development. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
MDR003	Haulage Yard, Newcastle Road, Market Drayton	Market Drayton	0.23	7	0.09	Asmall irregularly shaped site sitting between the A53 and Newcastle Road to the north east extreme of the built form of Market Drayton. The site is currently used for the storage and distribution of aggregates. As such the site is surfaced and has some associated development. The site is screened by hedging.	The surrounding area is predominantly residential.	Currently Suitable - Subject to Further Detailed Assessment	The site is considered suitable for open market residential development. Suitability is also subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is within 300m of a Conservation Area, accordingly the impact of any proposed development will need to be appropriately assessed and considered. Notwithstanding this there are few other constraints and the site is considered suitable for development.	Currently Suitable - Subject to Further Detailed Assessment	The site is considered suitable for employment development. LUD054	Currently Available	The site has been allocated for employment development. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been allocated for employment development. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been allocated for employment development. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for residential development as it is an allocated employment site, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. Suitability of the site for employment development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
LUD055	Currently Available	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but it is understood that there remains development interest; the site is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been the subject of either a refused or withdrawn Planning Application for an alternative use and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However, the site comprises an identified amenity green space. Development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.	Rejected	The sites availability, achievability and viability is unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any necessary further viability assessments. However, the site comprises an identified amenity green space. Development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.
MDR001	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. MDR004	Cricket Club, Betton Road, Market Drayton	Market Drayton	0.29	9	0.12	The site forms the north eastern end of the sport and leisure club ground and is currently formed of an area of hardstanding/parking and a number of buildings associated with the club. The site is flat.	The surrounding development is entirely residential in character.	Currently Suitable - Subject to Further Detailed Assessment	The site falls within the development boundary of Market Drayton. As such it is a suitable location for residential development. Although the site is included within the cricket club open space, the site itself does not include any green space (it is a brownfield site) although it does include the club house, any development would therefore need to demonstrate that this facility is no longer required or include a replacement facility. Any development on the site would need to address any physical, heritage and environmental constraints present. For instance, the site is within 300m of a Conservation Area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site falls within the development boundary of Market Drayton. As such it is a suitable location for employment development. Although the site is included within the cricket club open space, the site itself does not include any green space (it is a brownfield site) although it does include the club house, any development would therefore need to demonstrate that this facility is no longer required or include a replacement facility. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
MDR005	Land off Kilnbank Road, Market Drayton	Market Drayton	1.37	41	0.55	The site is open grassland with a number of trees currently used for grazing horses. There is a marked downward slope north to south towards the River Tern some distance away. The site has a single point of access adjacent to Kilnbank Cottage. The site is adjacent to site MDR023.	The site is mainly surrounded by a further agricultural land though the site is bordered along western and northern perimeters by a mix of size and age of residential dwellings.	Not Suitable	The site falls within the development boundary of Market Drayton. As a result the site is suitable in principle for open market residential development. However, as the site does not appear to have a sufficient road frontage to allow for the establishment of an appropriate access into the site. Furthermore, Kilnbank Road onto which any access would be provided is of limited width and subject to a weight limit.	Not Suitable	The site falls within the development boundary of Market Drayton. As a result the site is suitable in principle for employment development. However, as the site does not appear to have a sufficient road frontage to allow for the establishment of an appropriate access into the site. Furthermore, Kilnbank Road onto which any access would be provided is of limited width and subject to a weight limit.
MDR006	Land adjoining Adderley Road, Market Drayton	Market Drayton	4.55	137	1.82	A flat site made up of 2 adjacent fields that are currently used for agricultural purposes. The site is bordered to the south by the A53 and to the east by Adderley Road. The site falls outside of the development boundary.	Land to the west and north are also currently used for agriculture. To the south is the A53 on the other side of which new residential development is being built. To the east of Adderley Road is the Burnside Business Park.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53 and west of the A529. These are significant physical barriers which will require due consideration. The ability to provide an appropriate access into the site is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53 and west of the A529. These are significant physical barriers which will require due consideration. The ability to provide an appropriate access into the site is subject to highway approval.
MDR007	Land at Sych Farm	Market Drayton	1.36	41	0.55	The site appears to comprise a largely disused collection of farm buildings and their associated curtilage. The site is flat in nature. The site forms part of Sych Farm Phase 1 and as such is categorised as "protected employment". The site is within the development boundary.	To the site's western boundary is a large public house and its associated parking whilst to the north lies a lorry park and business park. To the East is agricultural land. To the south is the A53 on the opposite of which lies further business park development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is identified as protected employment land. As such open market residential development is contrary to policy. Furthermore the site forms part of a wider employment site and land to the east of the site has also been allocated for further employment provision, as such employment uses on this site may remain the most appropriate. However, the site (excluding the small area located within either flood zone 2 and/or 3, which would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere) may have long term potential for open market residential development subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, this is a significant physical barrier which will require due consideration. The ability and suitability of the existing access, through the wider employment site to serve a residential development or the suitability of an alternative access will require due consideration and highway authority approval. The site forms part of a wider employment site which may have implications for residential amenity.	Currently Suitable - Subject to Further Detailed Assessment	The site is identified as protected employment land. As such employment development is suitable in principle. This excludes the part of the site is located within flood zones 2 and/or 3, this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Suitability on the remainder of the site is subject to appropriate management of any physical, heritage and environmental constraints present.
MDR008	Land adjoining Betton Road, Market Drayton	Market Drayton	2.06	62	0.82	A triangular piece of land immediately to the north of the A53 and therefore currently outside of the development boundary. The land is flat in character and is used for agricultural purposes.	Land to the east, north and west are all also of an agricultural nature. Land to the south on the opposite side of the A53 is residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration, particularly for residential development. The ability to provide an appropriate access into the site will require due consideration and highway authority approval. Additionally the site is within proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration. The ability to provide an appropriate access into the site will require due consideration and highway authority approval. Additionally the site is within proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. MDR004	Currently Available	The site was subject to a series of applications for residential development in 2006 and 2008. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was subject to a series of applications for residential development in 2006 and 2008, no further applications have been submitted on the site and it has not been submitted under the call for sites. It remains unclear as to whether the site is available for other forms of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable, available, achievable; and viable (subject to any further necessary viability assessment) and appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Suitability is subject to the development including a replacement club house facility or demonstrating that this facility is no longer required as although the site is included within the cricket club open space, the site itself does not include any green space (it is a brownfield site) only the club house. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is suitable for development, as although the site is included within the cricket club open space, the site itself does not include any green space (it is a brownfield site) although it does include the club house, any development would therefore need to demonstrate that this facility is no longer required or include a replacement facility. Its availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site may have long term potential, subject to confirmation of the sites availability, achievability and viability; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
MDR005	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. MDR009	Land adjacent to Kirkridge, Shrewsbury Road, Market Drayton	Market Drayton	1.13	34	0.45	This site sits within the land between the Shrewsbury Road and A53 adjacent to the roundabout which forms the junction for these roads. The site is level and grassed currently used for grazing. The site forms part of the Muller/Culina protected employment land but is not yet specifically allocated.	This site sits within the land between the Shrewsbury Road and A53 adjacent to the roundabout which forms the junction for these roads: as such the majority of the boundary is formed by roads. To the immediate eastern end of the site is a small amount of residential development. On the other side of the A53 is further agricultural land also designated as protected employment land and on the other side of the Shrewsbury Rd is the Muller/Culina complex.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is identified as protected employment land. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located adjacent to a roundabout on the A53 and bordered by the A53 to the north and Shrewsbury Road to the south, the implications for residential amenity will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Currently Suitable - Subject to Further Detailed Assessment	The site is identified as protected employment land. As such employment development is suitable in principle. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is located adjacent to a roundabout on the A53 and bordered by the A53 to the north and Shrewsbury Road to the south. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
MDR010	Five Ways, Market Drayton	Market Drayton	0.91	27	0.36	The site is used as grazing land. It is fairly level with the River Tern running along the south west boundary.	Site located to south east of Five Ways, Walkmill Road with residential dwellings to the north and Walkmill Industrial Estate to the west and south. Pell Wall Historic Parkland is located to the south beyond the River Tern.	Not Suitable	The site is located in proximity to but outside the development boundary. As such residential development is contrary to policy. Furthermore, much of the site is located within flood zones 2 and/or 3, therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the site is in proximity of a listed building, conservation area and registered park therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a number of TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The site is located in proximity to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, as much of the site is located within flood zones 2 and/or 3, the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the site is in proximity of a listed building, conservation area and registered park therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a number of TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
MDR011X	Land adjacent to Autumn Vale	Market Drayton	0.19	N/A	N/A						
MDR012	Land at Victoria Farm, Market Drayton	Market Drayton	2.90	87	1.16	A large site immediately adjacent to the northern side of the A53. The site is mainly flat in nature and is formed of 6 entire fields and approximately half of another. The site is utilised for agricultural purposes and is bisected across its south western corner for a length of approx. 300 metres by the Shropshire Union Canal. The site's frontage (approx. 730m) to the A53 is formed by a verge and low fence with trees and hedgerow at some points whilst the frontages to the associated minor roads and internally are established hedgerow.	The sites neighbours fronting to the northern side of the A53 are agricultural in nature but are also subject to assessment in this study. Development to the southern, opposite, side of the A53 is residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration, particularly for residential development. The ability to provide an appropriate access into the site will require due consideration and highway authority approval. Additionally the site is within proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration. The ability to provide an appropriate access into the site will require due consideration and highway authority approval. Additionally the site is within proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
MDR013	Land adj. to Westways, Adderley Road, Market Drayton	Market Drayton	0.52	16	0.21	A small, flat site currently utilised for horse grazing. The site is bounded by the A53 to the south and the roundabout to the east connecting to Adderley Road and the dwelling Westway's.	The site is bounded to the north by further agricultural land (MRD006) which is currently used for agricultural purposes. The land is adjacent to the dwelling Westway's. To the opposite side of the A53 is residential development whilst to the opposite side of Adderley Rd is the Burnside Business Park.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53 and west of the A529. These are significant physical barriers which will require due consideration. The ability to provide an appropriate access into the site is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53 and west of the A529. These are significant physical barriers which will require due consideration. The ability to provide an appropriate access into the site is subject to highway approval.
MDR014	Land at Fordhall Farm, Market Drayton	Market Drayton	4.81	144	1.92	This site is formed of a field currently used for agricultural purposes. The site is flat with some frontage to the A53	The site is mainly surrounded by further agricultural land and some woodland to its eastern and northern boundaries which separate it from the Culina logistics depot and Fordhall Cottages.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is outside and separated from the development boundary by a wooded belt. As such open market residential development is contrary to policy. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of Market Drayton by a wooded belt, furthermore the built form of the settlement in proximity of the site is all employment land, the relationship of this site to the wider settlement therefore requires due consideration. The ability to provide an appropriate access is subject to highway approval. The site is within proximity of a veteran tree, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in close proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a listed milestone (building), therefore development is subject to an assessment of the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is outside and separated from the development boundary by a wooded belt. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of Market Drayton by a wooded belt. The built form of the settlement in proximity of the site is primarily in employment use, which could be complemented by other employment uses on this site. The ability to provide an appropriate access is subject to highway approval. The site is within proximity of a veteran tree, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in close proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. MDR009	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in a protected employment area, consequently open market residential development is contrary to policy. The site may have long term potential subject to appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the fact that the site is located adjacent to a roundabout on the A53 and bordered by the A53 to the north and Shrewsbury Road to the south, the implications for residential amenity will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered suitable for employment development. Suitability is subject to appropriate assessment and management of any physical, heritage and environmental constraints present. The sites availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Therefore the site has long term potential, subject to confirmation of the sites availability, achievability and viability; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.
MDR010	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. MDR015	Land west of Sych Farm, Market Drayton	Market Drayton	3.82	115	1.53	An area of flat agricultural land which surrounds on three sides a substantial single dwelling (The Woodlands) and its large curtilage which is also considered part of the site. Within the site the Woodlands and its curtilage are well screened by trees whilst the perimeter of the site largely consists of mature hedgerows.	To the south and east of the site is located a business park incorporating a sawmill, builders merchant, electrical wholesaler, auction house, tyre centre Abd veterinary surgery. To the north of the site is agricultural land. The site is bounded to the west by Adderley Rd, the opposite side of which is currently in agricultural use (site MDR006 of this study)	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such open market residential development is contrary to policy. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of a protected employment site beyond which is the A53 and east of the A529. These are significant physical barriers which will require due consideration, particularly for residential development. The ability to provide an appropriate access into the site is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of a protected employment site therefore further employment uses may complement the existing site. Beyond the protected employment site is the A53 and to the east is the A529. These are significant physical barriers which will require due consideration. The ability to provide an appropriate access into the site is subject to highway approval.
MDR016	Land adjacent to west of Adderley Road, Market Drayton	Market Drayton	0.71	21	0.28	The site is a long ovoid shape immediately adjacent to a curve on the A53 filling a space between the road and the recreation ground. Maximum dimensions 275mx40m. The site is grassed and flat in character and separated from the adjacent residential development and recreation ground by an established hedgerow.	To its north the site has a long frontage to the A53 on the opposite side of which is a large tract of land currently in agricultural use (MDR042 of this study). To the south west of the site is a site also in agricultural land but allocated for housing (SAMDEV MD030). To the south of the site is an area of land currently used for recreational purposes (including the football club). To the south east of the site is residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such open market residential development is contrary to policy. However, the site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is linear and hard against the A53, this has significant implications for design, layout and amenity.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have some long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is linear and hard against the A53, this has significant implications for design, layout and amenity.
MDR018	34 - 36 Stafford Street through to High Street, Market Drayton	Market Drayton	1.17	35	0.47	A complex town centre site that currently comprises an existing car sales business on Stafford St, a bowling club and some vacant land to the interior of the site and a piece of vacant land facing Great Hales Street adjacent to the Red Lion pub.	The town centre site is surrounded by a mix of uses including residential, retail (including a recent Asda store), drinking establishments and hotels and restaurants.	Currently Suitable - Subject to Further Detailed Assessment	The site falls entirely within the development boundary which represents a suitable location for development. However, the site contains two outdoor sports facilities, development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site is suitable for development subject to appropriate management of any physical, heritage and environmental constraints. For instance, the site is located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site also contains with Grade 2 listed buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.	Currently Suitable - Subject to Further Detailed Assessment	The site falls entirely within the development boundary which represents a suitable location for development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.
MDR019	Brooklyn House, Market Drayton	Market Drayton	0.21	6	0.08	The site is fronted by a large single dwelling and its associated outbuildings including a coach house. The property is G2 listed and falls within the Conservation Area. To the rear of the house is a garden.	The surrounding character of the area is predominantly residential though to the east of the property on the other side of Great Hales St which partly bounds the property is a school.	Currently Suitable - Subject to Further Detailed Assessment	The site falls entirely within the development boundary, it is therefore suitable for development in principal. Suitability is subject to appropriate assessment and management of any physical, heritage and environmental constraints present. For instance the site contains a listed building, which should be retained and complemented by any proposed development - informed by a heritage impact assessment. The site is of a relatively small size which means capacity is limited. The site is also located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls entirely within the development boundary, it is therefore suitable for development in principal. Suitability is subject to appropriate assessment and management of any physical, heritage and environmental constraints present. For instance the site contains a listed building, which should be retained and complemented by any proposed development - informed by a heritage impact assessment. The site is of a relatively small size which means capacity is limited. Furthermore due to the setting of the site, it is likely that only office based employment would be appropriate. The site is also located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.
MDR021	Land off Phoenix Bank, Market Drayton	Market Drayton	0.46	14	0.18	A low lying site to the south of Market Drayton town centre immediately adjacent to the A529 Newport Rd/Newtown road junction. The site is currently occupied by a series of workshops.	On the same side of the road the site is immediately surrounded by a single dwelling and similar workshops. To the other side of the A529 is the Market Drayton swimming centre, skatepark etc which is in turn bounded by the River Tern.	Not Suitable	The site is located within the development boundary, however it is not suitable for development since the majority of the site falls into Flood Zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.	Not Suitable	The site is located within the development boundary, however it is not suitable for development since the majority of the site falls into Flood Zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.

MDR015	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site was represented during the SAMDev Site Allocations process. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable (subject to any further necessary viability assessment). As the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
MDR016	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is not currently suitable for development as it is located in open countryside; consequently employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.
