MDR018	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered achievable; and viable, subject to any further viability assessments. The site is also considered suitable, outside the two areas identified as outdoor sports facilities (development in these elements of the site is not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision). Suitability is subject to appropriate assessment and management of the physical, heritage and environmental constraints present and where appropriate the outcome of a visual impact and landscape sensitivity assessment. For instance the site is located within a conservation area. Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. The sites long term potential is therefore subject to confirmation of its availability and management of any constraints present. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The sites availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. The site is however considered suitable, outside the two areas identified as outdoor sports facilities (development in these elements of the site would only be appropriate if an assessment is been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision). Suitability is subject to appropriate assessment and management of the physical, heritage and environmental constraints present (for instance the site is located within a conservation area) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. The site may have long term potential, subject to confirmation of the sites availability, achievability and viability; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
MDR019	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. MDR023	Land off Kilnbank Road, Market Drayton	Market Drayton	0.63	19	0.25	This site comprises grassland for grazing and is adjacent to site MDR005. The site is contained within hedgerow and has a marked downward slope north to south towards the River Tern some distance away. The site has no direct access to a road.	To the north and east the site is surrounded by further agricultural land. To the west and south the land is bounded by residential development.	Not Suitable	The site is located within the development boundary. However there is no obvious means of access to the site and it does not have a road frontage. Consequently the site is unsuitable for development.	Not Suitable	The site is located within the development boundary. However there is no obvious means of access to the site and it does not have a road frontage. Consequently the site is unsuitable for development.
MDR025	Land to rear of Salopian Star, Stafford Street, Market Drayton	Market Drayton	0.03	5	0.01	A small enclosed rectangular site, currently in use as a car park. Access is provided off Cross Street.	There is a public house/hotel to the north of the site; apartments and dwellings to the west of the site; a supermarket to the east of the site; and a car park to the south of the site.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Market Drayton development boundary. Consequently open market residential development on the site is suitable in principle. Suitability is subject to suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide a suitable access to the site would be subject to approval by the Highways Team. Additionally the site is located within proximity of a conservation area and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset(s). Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Market Drayton development boundary. Due to the sites location and surroundings, suitable employment uses are likely to be limited to those which are office based. Consequently office based employment development on the site is suitable in principle. Suitability is subject to suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide a suitable access to the site would be subject to approval by the Highways Team. Additionally the site is located within proximity of a conservation area and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset(s). Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
MDR026	Pet Market, Shrewsbury Road, Market Drayton	Market Drayton	0.14	5	0.05	Large plot containing a single large red-brick fronted building (in use by Pet First as a shop) surrounded by a large area of hardstanding.	The surrounding area is primarily residential.	Currently Suitable - Subject to Further Detailed Assessment	The site is considered suitable for residential development. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present.	Currently Suitable - Subject to Further Detailed Assessment	The site is considered suitable for appropriate employment development. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present.
MDR027	Land off Quarry House Lane, Market Drayton	Market Drayton	0.25	8	0.10	The site falls within the curtilage of and to the south of 45 Valley View with access onto Bottom Lane, a restricted byway, and agricultural fields beyond. The site falls outside of the development boundary.	To the east is a public right of way, Quarry Farm Lane, with houses to the east of it. To the west there are a number there are a number of dwellings off the end of Valley View with further agricultural land separating these from Bottom Lane.	Not Suitable	The site is currently outside of the development boundary. Open market residential development is therefore contrary to policy. Furthermore, the site does not have an obvious point of access, with its only potential point of access being a restricted byway and the sites frontage onto this byway is formed by a row of trees subject to TPO protection. It is also densely wooded the trees along its southern and eastern boundaries are subject to TPO protection. As such it is unsuitable for development.	Not Suitable	The site is currently outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the site does not have an obvious point of access, with its only potential point of access being a restricted byway and the sites frontage onto this byway is formed by a row of trees subject to TPO protection. It is also densely wooded the trees along its southern and eastern boundaries are subject to TPO protection. As such it is unsuitable for development.
MDR028	Land adjacent to the Old Dairy, Market Drayton	Market Drayton	1.56	47	0.62	The site consists of two fields which are both scrubland on their northern element and wooded on the southern element. The sites southern boundary abuts the River Tern.	Character to east and west is similar to the site itself. Character to the south is also a mix of woodland/scrubland, outdoor sports facilities (golf course), and large rural dwellings on large plots.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is outside of the development boundary. Open market residential development is therefore contrary to policy. Furthermore approximately 75% of this site is located within flood zones 2 and/or 3. Therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site is in proximity of a conservation area, registered park and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is outside of the development boundary. MDR023	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. Planning Permission previously granted for residential development. Pre-Application discussions also occurred regarding a residential development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, achievable and viable (subject to any further necessary viability assessment). However the site is not suitable for development as there is no obvious means of access to the site and it does not have a road frontage.	Rejected	The sites availability, achievability and viability are unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is not suitable for development as there is no obvious means of access to the site and it does not have a road frontage.
MDR025	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied and there is no obvious point at which this occupation will end or that the site is subject to another form of constraint that is not time limited and there is not confidence that it can be removed. Therefore information gathered for the purposes of this study suggests that the site is not currently available and is unlikely to become so for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. Achievable	Viability	The site was represented during the SAMDev Site Allocations process. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. Furthermore approximately 75% of this site is located within flood zones 2 and/or 3. Therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). As the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. However approximately 75% of this site is located within flood zones 2 and/or 3. Therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
MDR029	Land to the south of Newtown Leys, Market Drayton	Market Drayton	2.06	62	0.82	Approximately 60% of the site is within flood zones 2 and/or 3 and is formed by land behind current development sloping gently down to the River Tern. The land is currently used for agricultural and there a number of trees on the site.	The site has some low density dwellings adjacent to it to its north western quadrant whose curtilage also form the western boundary. The site's remaining boundary is formed by the River Teme whose opposite bank is formed by Pell Wall Park.	Not Suitable	The site is outside of the development boundary. Open market residential development is therefore contrary to policy. Furthermore, the site does not have a road frontage and is not currently accessible from the public highway. Additionally approximately 60% of the site falls in Flood Zones 2&3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. As a result the site is unsuitable for development.	Not Suitable	The site is outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site does not have a road frontage and is not currently accessible from the public highway. Additionally approximately 60% of the site falls in Flood Zones 2&3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. As a result the site is unsuitable for development.
MDR031	Longford Turning, Market Drayton	Market Drayton	4.48	134	1.79	This site is currently agricultural in nature. The site is long (approx. 420m) and narrow tapering from its 120m (approx.) frontage on Shrewsbury Road at its northern end to 50m (approx.) to its southern end. The roundabout off Shrewsbury Rd to Tern Valley Business Park is situated in the northern end of the site with the north western corner of the site being designated as protected employment land to accommodate this access. The site falls in the development boundary.	The western side of the site is bounded by the Tern Valley Business Park whilst the eastern side is residential in nature. The southern end is bounded by an area of woodland	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Market Drayton development boundary. However, the north western corner of the site is a protected employment site. As such residential development is suitable in principle apart from the element of the site which is protected for employment (suitability of which would be dependent on appropriate policy changes). Suitability on the site is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site is adjacent (and partly contains) the Tern Park Business Park a protected employment site, consideration of residential amenity is therefore necessary. The site is within proximity of a number of veteran trees, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Approximately half of the site is densely wooded and this will require due consideration.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Market Drayton development boundary. The north western corner of the site is a protected employment site. As employment development is suitable in principle. Suitability on the site is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site is adjacent (and partly contains) the Tern Park Business Park a protected employment site, consideration of residential amenity is therefore necessary. The site is within proximity of a number of veteran trees, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Approximately half of the site is densely wooded and this will require due consideration.
MDR032	Long Meadow Farm, Longslow Road, A53, Market Drayton	Market Drayton	24.99	750	10.00	The site is a large, flat area currently formed of three fields used for agricultural purposes bisected roughly halfway by the road to Longslow. The site falls to the north of the A53 and is accordingly outside the development boundary.	The site is neighbored by similar fields used for agricultural purposes. The land on the south side of the A53 is currently used for agriculture but is allocated in the SAMDEV for housing.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such open market residential development is contrary to policy. Furthermore, approximately 20% of the site is within Flood Zone 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. However, the remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration, particularly for residential development. The ability to provide an appropriate access into the site will require due consideration and highway authority approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 20% of the site is within Flood Zone 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration. The ability to provide an appropriate access into the site will require due consideration and highway authority approval.
MDR034	Land to north of A53 and west of Maer Lane, Market Drayton	Market Drayton	5.67	170	2.27	The site falls between a business park and canal and is currently in agricultural use. It is flat in nature and formed of 5 fields separated by established hedgerows.	To the west of the canal (which forms the eastern boundary of the site) the surrounding activity is employment land (mainly B2 and B8). The east of the canal currently remains agricultural in nature.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is not currently suitable for development as it is located outside the settlements development boundary. Furthermore, part of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have some long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. Such constraints include providing an appropriate access to and into the site, which would be subject to highway approval. The site is located to the north of the A53, a significant physical barrier which will require due consideration. The need to provide appropriate buffers to surrounding employment uses and road infrastructure. Furthermore the site is within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the settlements development boundary, therefore employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, part of the site is located within flood zones 2/3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have some long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. The site is located to the north of the A53, a significant physical barrier which will require due consideration. Furthermore the site is within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
MDR035X	Land North East Side of Bottom Lane, Market Drayton	Market Drayton	0.19	N/A	N/A						
MDR037	Land off Greenfield Lane, Market Drayton	Market Drayton	7.34	220	2.94	The site, which falls within the development boundary, comprises a number of Soccer and Rugby Football playing pitches along with associated development. The site is split by Greenfields Lane.	The site is bounded to the eastern side by recent residential development whilst there is currently agricultural land to the other sides of the site, though it should be noted that with the exception of a small area (MDR016) to the north of this site much of the adjoining land is allocated for housing by SAMDEV (MD030, MDO10/028)	Not Suitable	The site is located within the development boundary. However, the site comprises an outdoor sports facility. Development is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The ability to provide an appropriate access into the site would be subject to highway approval. Furthermore a portion of the site is located within flood zones 2&3, this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Suitable	The site is located within the development boundary. However, the site comprises an outdoor sports facility. MDR029	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site was represented during the SAMDev Site Allocations process. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not suitable for development as it does not have a road frontage and is not currently accessible from the public highway. Additionally approximately 60% of the site falls in Flood Zones 2&3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not suitable for development as it does not have a road frontage and is not currently accessible from the public highway. MDR031	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). The site is also considered suitable (apart from the element of the site which is protected for employment, for which suitability is also dependent on appropriate policy changes) subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Key constraints include proximity to and presence of mature trees / trees subject to TPO protection; highway access; and site/surrounding amenity.	Long Term Potential - Subject to Further Detailed Assessment	The sites availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site is considered suitable for employment development, subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Key constraints include proximity to and presence of mature trees / trees subject to TPO protection; highway access; and site/surrounding amenity. The site therefore has long term potential, subject to confirmation of the sites availability, achievability and viability.
MDR032	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify this matter. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. MDR038	Land west of Sych Farm, Western Way, Market Drayton	Market Drayton	3.82	115	1.53	The site is currently in agricultural use and is gently undulating.	The site is bounded to the south by the northern edge of the business park to which this site would form an extension. The remainder of the surrounding area is in agricultural use.	Not Suitable	The site is located outside but adjacent to the development boundary. As such open market residential development is contrary to policy. Furthermore, the site, which has been promoted for employment development, would effectively form an extension to the business park and would be isolated from other local residential development. Access to the site would need to be achieved via the extension of the business park access road. The site is located to the north of the A53 (although it is separated from the road and by protected employment land) this road remains a significant physical barrier which will require due consideration, particularly for residential development. As such the site is not considered to have long term potential for open market residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside but adjacent to the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment development subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53 (although it is separated from the road and by protected employment land) this road remains a significant physical barrier which will require due consideration. The ability and suitability of the likely access, through the adjacent employment site will require due consideration and highway authority approval.
MDR039	Longford Turning, Market Drayton	Market Drayton	5.26	158	2.11	A site formed of a single field in agricultural use situated on the northern side of the A53. The site is gently undulating and is bound by hedgerow.	The site is largely surrounded by agricultural land although to the north of the site, on the opposite side of the lane, is a short run of dwellings and to the north west an equestrian centre. To the south west of the site is the A53 to the opposite of which is agricultural land.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration, particularly for residential development. The ability to provide an appropriate access into the site will require due consideration and highway authority approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration. The ability to provide an appropriate access into the site will require due consideration and highway authority approval.
MDR040	Flash Lane, Market Drayton	Market Drayton	2.44	73	0.98	The site comprises an irregularly shaped field to the south of Market Drayton lying between Bottom Lane and the River Tern. The site, of which approx. 50% of its area lies in Flood Zone 2&3, is flat and used for grazing.	The site is bound to the north by Bottom Lane an unadopted track to the other side of which is an area of amenity land. The River Tern flows to the south of the site beyond which is further agricultural land which also extends to the east and west of the site.	Not Suitable	The site falls outside the development boundary so development currently contrary to policy. The ability to provide an appropriate access, particularly a vehicular access, is unclear. Furthermore, a very small portion of the site is identified as a natural/semi-natural open space, this element of the site is therefore not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. A large proportion (approx. 50%) of the site is situated in flood zones 2&3, this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Due to these constraints, the site is not considered suitable for development. Additionally, the site contains a veteran tree and is within proximity of another veteran tree and trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The site falls outside the development boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the ability to provide an appropriate access, particularly a vehicular access, is unclear as the site does not have a road frontage. Furthermore, a very small portion of the site is identified as a natural/semi-natural open space, this element of the site is therefore not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. A large proportion (approx. 50%) of the site is situated in flood zones 2&3, this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Due to these constraints, the site is not considered suitable for development. Additionally, the site contains a veteran tree and is within proximity of another veteran tree and trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
MDR041	North of A53 and east of Shrewsbury Road, Market Drayton	Market Drayton	14.41	432	5.76	This large site, comprised of a single field, sits immediately to the north of the A53 and is currently in agricultural use. The site slopes down gently from South to North towards a water course.	The site is bound to the south by the A53 beyond which is residential development. To the remaining sides of the site is agricultural land.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such open market residential development is contrary to policy. Furthermore, approximately 10% of the site is within Flood Zone 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. However, the remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration, particularly for residential development. The ability to provide an appropriate access into the site will require due consideration and highway authority approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. MDR038	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify this matter. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been promoted for employment development. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable; and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development as it is located outside but adjacent to the development boundary. As such open market residential development is contrary to policy. Furthermore, the site would effectively form an extension to the business park and would be isolated from other local residential development. Access to the site would need to be achieved via the extension of the business park access road. The site is located to the north of the A53 (although it is separated from the road and by protected employment land) this road remains a significant physical barrier which will require due consideration, particularly for residential development.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. As the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment, subject to appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include there provision of access to the site.
MDR039	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purposes of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. MDR042	North of the A53 and Greenfield Sportsfield, Market Drayton	Market Drayton	20.39	612	8.16	This large site is formed of three fields currently used for agricultural purposes. The site is gently undulating sloping gently upwards to its north eastern corner. Situated to the northern side of the A53 to the north of Market Drayton the site is adjacent to but outside of the development boundary.	The land surrounding the site to the north of the A53 is currently in agricultural use. Land to the south of the A53 opposite the site is currently in agricultural use but awaiting planning application decisions	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such open market residential development is contrary to policy. Furthermore, approximately 15% of the site is within Flood Zone 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. However, the remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration, particularly for residential development. The ability to provide an appropriate access into the site will require due consideration and highway authority approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 10% of the site is within Flood Zone 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration. The ability to provide an appropriate access into the site will require due consideration and highway authority approval.
MDR043	Rear of Brookfields, Longford Turning, Market Drayton	Market Drayton	5.67	170	2.27	The site is formed of part of a large field in agricultural use to the north of Longford Lane enclosing to the rear of Brookfield's cottages. The site is gently undulating.	The surrounding area is predominantly agricultural in nature. To its east the site wraps around the Brookfield's cottages whilst there is an equestrian centre to the opposite side of the lane at its western extent.	Not Suitable	The site is in open countryside and is not adjacent to the development boundary. As such open market residential development would therefore be contrary to policy. Furthermore as the site is separated from the development boundary and the A53 by an agricultural field, in isolation the site is not considered suitable for development. However, the site may have long term potential as part of a wider development with adjacent parcels, subject to appropriate policy changes and management of any physical, environmental or heritage constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration, particularly for residential development. The ability to provide an appropriate access into the site will require due consideration and highway authority approval.	Not Suitable	The site is in open countryside and is not adjacent to the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, as the site is separated from the development boundary and the A53 by an agricultural field, in isolation the site is not considered suitable for other forms of employment development. However, the site may have long term potential as part of a wider development with adjacent parcels, subject to appropriate policy changes and management of any physical, environmental or heritage constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration, particularly for residential development. The ability to provide an appropriate access into the site will require due consideration and highway authority approval.
MDR044	Land off Tern View, Market Drayton	Market Drayton	1.52	46	0.61	The site is formed of an area of land previously used in connection with the treatment of sewage and now given over to open space. The site is bound by residential development to the north (Tern View) and the west (Valley View). The site is bound to the south and east by Bottom Lane, an unadopted track.	To the north and west of the site is relatively recent residential development. To the site's southern and eastern sides it is bound by Bottom Lane, an unadopted track to the other side of which is agricultural land.	Not Suitable	The site is located adjacent to but outside the development boundary. As such development is currently contrary to policy. Furthermore the ability to provide an appropriate access to and into the site, particularly for vehicles is unclear as the site cannot be accessed from the public highway except via Bottom Lane a narrow unadopted single track lane.	Not Suitable	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the ability to provide an appropriate access to and into the site, particularly for vehicles is unclear as the site cannot be accessed from the public highway except via Bottom Lane a narrow unadopted single track lane.
MDR045	Land at Sych Farm / Victoria Farm, Maer Lane, Market Drayton	Market Drayton	16.43	493	6.57	Series of agricultural fields located to the north of Market Drayton and the A53. The site is allocated for employment development.	Character to the north is employment, beyond which is agricultural. Character to the east is agricultural. Character to the West is employment. Character to the south is predominantly employment.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. As such residential development is contrary to policy. Furthermore, approximately 25% of the site (southern element closest to the settlement) is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, a portion of the northern element of this site has Planning Permission for employment development and it would be expected that this permission is implemented. However, the remainder of the site beyond these areas may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the character of the area is predominantly employment based, with employment sites to the north, south and west. Furthermore the likely access to the site is through an employment site, the implications for residential amenity therefore requires significant consideration. The site is also separated from much of the settlement by the A53, a significant physical barrier, this will also require due consideration. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Indeed a portion of the northern element of the site has now achieved permission and it is expected that this will be implemented. However, part of the site (along its western boundary) is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is suitable subject to appropriate management of any physical, heritage and environmental constraints present. For instance, the site is in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

MDR042	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered likely to become available, viable and achievable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, approximately 15% of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate changes to policies affecting this location; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However as the site is located in open countryside, suitable employment is limited to small scale rural enterprise and diversification schemes. Furthermore, approximately 15% of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment subject to appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
MDR043	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable, achievable and viable (subject to any further necessary viability assessment). However the site in isolation is not considered suitable for development as it is separated from the development boundary and the A53 by an agricultural field, therefore alone it would represent an isolated block of development in the countryside.	Rejected	Availability, achievability and viability of the site are unknown. Furthermore the site in isolation is not considered suitable for development as it is separated from the development boundary and the A53 by an agricultural field, therefore alone it would represent an isolated block of development in the countryside.
MDR044	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been allocated for employment development. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is an employment allocation, consequently open market residential development is contrary to policy. Furthermore, part of the site (southern portion of the site) is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, a portion of the northern element of this site has Planning Permission for employment development and it would be expected that this permission is implemented. The remainder of the site beyond these areas may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the fact that the character of the area is predominantly employment based, with employment sites to the north, south and west. Furthermore the likely access to the site is through an employment site, the implications for residential amenity within any mix of uses therefore requires significant consideration. The site is also separated from much of the settlement by the A53, a significant physical barrier, this will also require due consideration. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. Indeed a portion of the northern element of the site has now achieved permission and it is expected that this will be implemented. Suitability of the site for employment development (apart from a small area located in flood zones 2 and/or 3 - this part of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere) is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

MDR046	East of Maer Lane and North of the A53, Market Drayton	Market Drayton	38.21	1146	15.28	A large site located to the north of the A53 and north east of Market Drayton. The site consists of a series of agricultural fields.	Character to the north and east is rural. Character to the south is predominantly residential. Character to the east is a mix of rural and land allocated for employment development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is located to the north of the A53, a significant physical barrier which will require due consideration, particularly for residential development. The ability to provide an appropriate access into the site will require due consideration and highway authority approval. Additionally the site is within proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
MOR047	Rear of the Villas, Shrewsbury Road, Market Drayton	Market Drayton	0.41	12	0.17	A linear site incorporating one of the two properties collectively described as 'The Villas' and land to the rear of the two properties.	Character to the north, east and south is predominantly residential. Character to the west is a mix of woodland and scrubland beyond which is a commercial area.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Market Drayton development boundary. As such the principle of residential development is established. Suitability is subject to suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Market Drayton development boundary. As such the principle of employment development is established. Suitability is subject to suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is in proximity of a number of residential dwellings, the type of employment development must complement this setting and is therefore likely to be limited to office based employment.
MOR001X	Land at Pleasant View, Weston Rd	Morda near Oswestry	0.1	4	0.06			Not Suitable	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Not Suitable	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
MOR005	Land north of Trefonen Road, Morda	Morda near Oswestry	8.0	239	3.19	A relatively large, flat site currently in agricultural use. The site is close to the village centre.	The site is bound to the south by Trefonen Rd which to its opposite side is occupied by residential development and a pub to the SE corner. The site is bound to the east by Morda Bank which is similarly occupied by residential development to its opposite side. To the northern edge of the site is a scrapyard/auto salvage site beyond which flows the River Morda. To the west of the site is further agricultural land.	Not Suitable	The site is located to the west of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such open market residential development is contrary to policy. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for open market residential development. The site may also be subject to physical, heritage and environmental constraints. For instance the site is relatively large in relation to the existing built form of Morda, this will require due consideration. The site forms part of the gap between Morda and Oswestry. The site contains and is in proximity of a number of trees with TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a number of G2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located to the west of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
MOR008	Land at Old Farm, Morda	Morda near Oswestry	0.4	11	0.15	This triangular site is formed of the northern portion of a field that is currently in agricultural use. The site appears to be gently undulating. The site sits behind current development on Old Way and does not appear to have established vehicular access.	The NW side of the site backs onto the dwellings along Old Way whilst the NE side of the site sits to the rear of the Primary School grounds. The Southern side of the site is bound by agricultural land formed by the remainder of the field which the site is currently part.	Not Suitable	The site is located to the south of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such open market residential development is contrary to policy. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for open market residential development. The site may also be subject to physical, heritage and environmental constraints. For instance it is currently unclear whether the site has a road frontage/point of access. The site is also in proximity of a number of G2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not considered suitable for development as it is located to the west of the village of Morda which is considered to be countryside. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for open market residential development. Furthermore, it is currently unclear how the site would gain access to the public highway system, therefore the site is unsuitable for development.	Rejected	Availability, achievability and viability of the site are unknown. As the site is located to the west of the village of Morda which is considered to be countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. However, it is also currently unclear how the site would gain access to the public highway system, therefore the site is unsuitable for development.

MOR009	Land at Ty Valdwyn, Morda	Morda near Oswestry	2.9	87	1.16	The site comprises a single large elongated field currently in agricultural use and part of the curtilage of a large residence known as Ty-Faldwyn. The site stretches along the B5069 to its western side to which there is direct access to the site at its southern end.	To the opposite side of the A5069 is existing residential development. To the north of the site is the curtilage of the village primary schools and to its west is agricultural land. To the south of the site is the residence Ty-Faldwyn.	Not Suitable	The site is located to the south of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such open market residential development is contrary to policy. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for open market residential development. The site may also be subject to physical, heritage and environmental constraints. For instance the site is also in proximity of a number of G2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located to the south of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not an appropriate location for other forms of employment development. The site may also be subject to physical, heritage and environmental constraints. For instance the site is also in proximity of a number of G2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
MOR010	Land north east of football ground, Morda	Morda near Oswestry	6.3	190	2.54	A large irregularly shaped site to the north of Weston Road, north east of the football ground and Morda. The site consists of a series of agricultural fields with their northern and eastern boundaries defined by the River Morda.	Surrounding character is predominantly agricultural, although there are some farmsteads/farmhouses and a depot in proximity of the site.	Not Suitable	The site is located to the east of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such open market residential development is contrary to policy. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for open market residential development. The site may also be subject to physical, heritage and environmental constraints. For instance the site is also in proximity of a number of G2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Part of the central portion (approximately 10%) of the site is located within flood zones 2 and/or 3 and the northern element of the site (approximately 80%) is only currently accessible through flood zones 2 and/or 3, therefore these elements of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Alternatively the northern element of the site which (not located in but accessed through flood zones 2 and/or 3) could be accessed through the adjacent development sites once constructed, however there is currently no certainty about the layout of this development.	Not Suitable	The site is located to the south of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not an appropriate location for other forms of employment development. The site may also be subject to physical, heritage and environmental constraints. For instance the site is also in proximity of a number of G2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. Alternatively the northern element of the site which (not located in but accessed through flood zones 2 and/or 3) could be accessed through the adjacent development sites once constructed, however there is currently no certainty about the layout of this development.
MOR011X	Land at Nant Lane	Morda near Oswestry	0.1	3	0.04			Not Suitable	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.		
MOR012	Land between Weston and Morda	Morda near Oswestry	45.4	1362	18.15	A very large site consisting of numerous agricultural fields located between Weston and Morda. The southern element of the site contains a large pond and surrounding land is relatively boggy. The site is bounded by the A483 to the east; Weston Road to the north; Sunnyside (B5069) to the west; an access track to the pond and the pond itself to the south west and a wooded belt the south east.	Surrounding land uses include agricultural uses to the south, south west and east. Commercial/employment land to the north east. Residential dwellings to the north west. A mix of public open space, a football ground, agricultural land and a depot to the north.	Not Suitable	The site is located to the south-east of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such open market residential development is contrary to policy. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for open market residential development. The site may also be subject to physical, heritage and environmental constraints. For instance due to the sites size much of the site is distant from the settlements built form. The site is also of a scale that is disproportionate in size to the existing settlement of Morda. The north eastern corner of the site is located in flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Due to the size of the site, the ability to provide an appropriate vehicular access is unclear. The site also includes a large pond and elements of the site around it are understood to be boggy, furthermore the pond may have implications for the presence of protected species, these factors may further limit the sites development potential.	Not Suitable	The site is located to the south of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not an appropriate location for other forms of employment development. The site may also be subject to physical, heritage and environmental constraints. For instance due to the sites size much of the site is distant from the settlements built form. The site is also of a scale that is disproportionate in size to the existing settlement of Morda. MOR009	Availability Unknown	The site was promoted within a previous SHLAA and there is no evidence to suggest that it is not available for development in the future.	Availability Unknown	It is uncertain whether this land would be available for employment development.	Achievable	Viability Unknown	Shropshire's geographical location and rural topography makes it a very desirable place to live. Shropshire like many other Counties has a diverse housing market, with great variation of house prices and in landowners' expectations of land value. Shropshire Council uses a dynamic viability index to determine affordable housing contributions from residential development. Recognising the diversity across Shropshire, this has resulted in three different affordable housing contribution zones, which provide a geographical indication of the relative strength of the housing market – the higher the contribution the stronger the market. Within these different affordable housing contribution zones, landowner's expectations vary in line with the market, with essentially higher land prices in areas with a higher affordable housing contribution, and lower values in areas with a lower affordable housing contribution. However, although there is a general recognition in this variance, within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Indeed, there is no zone within Shropshire within which an affordable housing contribution is considered inappropriate. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing land owner and willing developer. Consequently, residential development upon any site is	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not considered suitable for development as it is located to the west of the village of Morda which is considered to be countryside. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for open market residential development.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However as the site is located to the west of the village of Morda which is considered to be countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes.
MOR010	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. MOR014	Weston House Mill, Morda	Morda near Oswestry	0.6	19	0.26	The site consists of a haulage yard and premises.	Character to the north, south and east is predominantly agricultural, although there are also fishing pools to the east. Character to the west is a mix of residential and agricultural land with Planning Permission for residential development.	Not Suitable	As the site is brownfield and contains existing buildings, residential uses of existing buildings consistent with local and national policies may be appropriate, other open market residential development would be contrary to policy. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for other open market residential development. The site may also be subject to physical, heritage and environmental constraints. For instance the suitability of the existing access to serve any redevelopment of the site would require highway approval.	Currently Suitable - Subject to Further Detailed Assessment	As a site in existing employment use, alternative employment uses may be appropriate subject to material considerations. Such material considerations include suitable management of any physical, heritage and environmental constraints. For instance the suitability of the existing access to serve any redevelopment of the site would require highway approval.
MOR015	Land at The Cottams, Morda	Morda near Oswestry	1.1	34	0.46	The site consists of the majority of an agricultural field which wraps around The Cottams to the north of Morda. The site is located and forms much of the gap between Oswestry and Morda.	Land to the east is predominantly residential. Land to the west is predominantly agricultural, Land to the north is a mix of agricultural land (much of which is allocated for residential development) and residential. Character to the south is a mix of low density residential and commercial properties.	Not Suitable	The site is located to the west of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such open market residential development is contrary to policy. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for open market residential development. The site may also be subject to physical, heritage and environmental constraints. For instance the site forms part of the gap between Morda and Oswestry. The ability to provide an appropriate access is subject to highway approval. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located to the west of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not an appropriate location for other forms of employment development. MOR016	The Withy Beds, Morda	Morda near Oswestry	2.4	73	0.97	The site consists of a narrow access road from Morda Bank through to an irregularly shaped area containing Lake Vyrnwy Terrace, its curtilages and associated structures. The site then continues as a narrow access road through the Withy Beds, which consists of a large field with surrounding access track/ The Withy beds is crossed by the River Morda to its southern extent, which is bridged within the site.	Character to the south and west are predominantly agricultural. Character to the north varies from residential (north of the Withy Beds) to a mix of low density residential, commercial and agricultural (north of the remainder of the site). Similarly character to the east of the site varies from agricultural fields (west of the Withy Beds) to amenity green space/residential (west of the access point to the site).	Not Suitable	The site is located to the west of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such open market residential development is contrary to policy. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for open market residential development. The site may also be subject to physical, heritage and environmental constraints. For instance the site forms part of the gap between Morda and Oswestry. Approximately 55% of the Withy Beds element is located within Flood Zones 2 and/or 3 and approximately a further 32% is located to the north of the element of the site located within flood zones 2 and/or 3 and is only accessible through this area, these elements of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The existing access is relatively narrow and convoluted. The suitability of this access to serve the redevelopment/development of the site is subject to highway approval. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located to the west of the village of Morda. Morda is not currently identified as or proposed to be identified as a Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for other forms of employment development. The site may also be subject to physical, heritage and environmental constraints. For instance the site forms part of the gap between Morda and Oswestry. Approximately 55% of the Withy Beds element is located within Flood Zones 2 and/or 3 and approximately a further 32% is located to the north of the element of the site located within flood zones 2 and/or 3 and is only accessible through this area, these elements of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is also in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
OSW020X	Land at Blue Row Cottages	Morda near Oswestry	0.02	N/A	N/A						
MUW001	Smithfield Works, Much Wenlock	Much Wenlock	0.55	17	0.22	Currently used for commercial vehicle sales repair and storage. Large warehouse/depot building remainder concrete/hard standing for vehicle storage and parking. Hard boundaries to all sides. NE boundary with Bridge St, S boundary with Fire Station, SW boundary with residential, NW boundary with mature trees onto Southfield Rd	Urban surroundings - residential streets to N, E and W. South boundary with existing Fire Sta. Site is well contained and related to existing urban environment.	Currently Suitable - Subject to Further Detailed Assessment	Complies with current policy and is also a brownfield site. Within 500m of a SSSI so development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site boundary is also within 30m of a Tree Preservation Order. Development is subject to an assessment of impact on this protected tree in order to demonstrate how it can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Site is also within 300m of a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. MUW002	Builders Yard, New Road, Much Wenlock	Much Wenlock	0.38	11	0.15	Brownfield site within development boundary. Currently in use as Travis Perkins Builders yard for retail and commercial sales. Residential use to N,W (past amenity green space) and E telephone exchange (MUW001) to S. Site boundaries are clearly defined by neighbouring uses to N and S with Smithfield Rd to E and to W to amenity green space by established trees and hedgerow. Site has long standing (130+ yrs.) history of commercial and industrial use including rail line/sidings, coal storage, and depot. Site has road frontage and current vehicle access to Smithfield Rd. Pedestrian and cycle access also via Smithfield Rd to existing established links.	Mixed use urban area.	Currently Suitable - Subject to Further Detailed Assessment	Complies with current policy and is also a brownfield site. Site is also within 300m of a Conservation Area, SAM, registered parkland and several Listed Buildings including grd1 and 2*. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. MOR014	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). As the site is brownfield and contains existing buildings, residential uses of existing buildings consistent with local and national policies may be appropriate, other open market residential development would be contrary to policy. As the site is considered to be associated with the settlement of Morda and not Oswestry, it is not considered to have long term potential for other open market residential development.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. As a site in existing employment use, alternative employment uses may be appropriate subject to material considerations. Such material considerations include suitable management of any physical, heritage and environmental constraints. The sites long term potential is therefore dependent on these material considerations and confirmation of the sites availability, achievability and viability.

OSW020X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
MUW001	Not Currently Available - Likely to become so	Previously submitted for consideration within the SHLAA; SAMDev Plan; and the Much Wenlock Neighbourhood Plan. Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	Previously submitted for consideration within the SHLAA and SAMDev Plan.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. MUW003	Southfields Road, Much Wenlock	Much Wenlock	1.22	37	0.49	Single field in agricultural use - arable. Adjacent to built up area (development boundary) on SE and SW boundaries. Boundaries defined by hedges/trees	Woodland to NW; residential and Care Home (the Wheatland's) to SE and SW; access track, allotments and arable field to NE. Boundaries are well defined either as field boundary or by hedges/trees and track. Adjoins existing built up area and would extend built up area into surrounding countryside.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Not in accordance with current policy (Much Wenlock Neighbourhood Plan) so not suitable in policy terms. The site may have some long term potential if the policy position changes, and suitable management of any physical, heritage and environmental constraints is possible. For instance the ability to provide an access is unclear and subject to highway approval. If these issues are resolved, the following constraints will need to be taken into account. Within 500m of a SSSI so development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of a Conservation Area and several Grade II Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Consistency with the development plan depends on type of employment use, landscape constraints, access issues and amenity impact on adjacent properties. The site may have some long term potential for other forms of employment if the policy position changes, and suitable management of any physical, heritage and environmental constraints is possible. For instance the ability to provide an access is unclear and subject to highway approval. If these issues are resolved, the following constraints will need to be taken into account. Within 500m of a SSSI so development is subject to an assessment of impact on the notified special interest features of the SSSI. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
MUW006	Land to the rear of the cemetery and north of Oakfield Park, Much Wenlock	Much Wenlock	15.69	471	6.27	Agricultural land, arable and grazing. Segment on E side in use as allotments and with extant pp for cemetery extension. Site rises significantly from NE to SW. N element of site well related to existing settlement; S element would be extension of existing Oakfield Park into countryside. Boundaries well established on all sides: W field boundary of established trees and hedgerow, NW with Bourton Rd and residential properties and Gaskell Arms Hotel, E with Bridgnorth Rd (A458), SE with cemetery and Oakfield Park residential properties. Site bisected by track known as Dark Lane.	Agricultural land to NW, W, and SW. Residential to SE (Oakfield Park), E cemetery, NE A458 and urban area, N residential and Gaskell Arms Hotel.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Not in accordance with policy (Much Wenlock Neighbourhood Plan). The site may have some long term potential if the policy position changes, and suitable management of any physical, heritage and environmental constraints is possible. Specifically comments will be needed from Highways on the suitability of any access into the site from the A458. Furthermore, development is likely to lead to the loss of allotments therefore compensatory provision would be required and there may be amenity issues linked to the adjacent cemetery. The site is also within 300m of a Conservation Area and several Listed Buildings so development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a RIGS. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Not in accordance with policy (Much Wenlock Neighbourhood Plan) unless proposed use is recreation and tourism. The site may have some long term potential for other forms of employment if the policy position changes, and suitable management of any physical, heritage and environmental constraints is possible. Specifically comments will be needed from Highways on the suitability of any access into the site from the A458. Furthermore, development is likely to lead to the loss of allotments therefore compensatory provision would be required and there may be amenity issues linked to the adjacent cemetery. The site is also within 300m of a Conservation Area and several Listed Buildings so development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 250m of a RIGS. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
MUW007	Land off Bourton Road, Much Wenlock	Much Wenlock	16.84	505	6.73	Site largely agricultural grazing and arable. Small area in NE corner used as car park for Vets; area of (managed?) woodland on N boundary; on NW boundary area used for storage and distribution of building and farm materials. Boundaries strong to N and NW with residential properties and businesses; to E with Bourton Rd; to W and S field boundaries of hedgerows and individual trees. Reasonably related to existing settlement and ribbon development along Stretton Rd but would extend urban area into countryside. Site rises from NE to SW	Urban in character to N NE and NW, agricultural to S and E.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Not in accordance with policy (Much Wenlock Neighbourhood Plan). The site may have some long term potential if the policy position changes, and suitable management of any physical, heritage and environmental constraints is possible. Specifically comments will be needed from Highways concerning access. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of a RIGS. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Additionally the site is within 300m of a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. Consequently, employment development on the site is limited to appropriate recreation or tourism uses, consistent with the Much Wenlock Neighbourhood Plan. The site may have some long term potential for other employment uses if the policy position changes, and suitable management of any physical, heritage and environmental constraints is possible. Specifically comments will be needed from Highways concerning access. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of a RIGS. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Additionally the site is within 300m of a Conservation Area and several Listed Buildings. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
MUW008	Land to the south of Sytche Lane, Much Wenlock	Much Wenlock	11.12	334	4.45	Site includes MUW003. Site largely in agricultural use - grazing and arable fields. Area on W boundary in use as allotments; area on N boundary developed for 13 affordable housing; area in NW corner pp for town flood attenuation pond. Site rises from W to E. Strong boundaries to N with Sytche La, E with Sheinton St and properties on Southfield Rd and S with Wheatland's Residential Home. W obvious hedgerow boundaries with adjacent fields and woodland.	W agricultural fields and woodlands. S and E residential properties and Wheatland's Home. N residential properties, Sytche lane and caravan park (touring).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Not in accordance with development plan. Furthermore, approximately 10% of the site comprises an identified allotment. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have some long term potential if the policy position changes, and suitable management of any physical, heritage and environmental constraints is possible. Specifically the ability to provide a suitable access is subject to highway approval. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of a RIGS. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Registered Park or Garden; a Scheduled Monument; a Conservation Area and several Listed Buildings. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. Consequently, employment development on the site is limited to appropriate recreation or tourism uses, consistent with the Much Wenlock Neighbourhood Plan. Furthermore, approximately 10% of the site comprises an identified allotment. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have some long term potential for other forms of employment if the policy position changes, and suitable management of any physical, heritage and environmental constraints is possible. Specifically the ability to provide a suitable access is subject to highway approval. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 250m of a RIGS. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
MUW009	Sytche Caravan and Camping Park, west of Much Wenlock	Much Wenlock	4.66	140	1.87	Site is mixed greenfield/brownfield site outside and away from development boundary to W of town. Site is currently in use as touring caravan/camping site on S half whilst N half remains in agricultural use for grazing/fodder crops. Caravan site area has hard standing pitches, grass pitches, surfaced access roads, amenity blocks and reception building. Site is bounded by agricultural land to N, S, and W and by woodland/forestry to E. Site boundaries are comprised of trees and established hedgerows on all sides whilst boundary between caravan site and agricultural use is also trees and hedgerow. Site has vehicle access from Sytche Lane but no road frontage as such. Pedestrian and cycle access also via Sytche Lane to established networks. Site is not well related to existing development. Site rises from S-N towards Wenlock Edge.	Farmland and woodland	Not Suitable	The site is detached from the built form of the settlement. It is located outside and separated from the development boundary by a densely wooded area. It is therefore located within the open countryside. As such open market residential development is contrary to policy in Core Strategy and SAMDev policy as well as the Much Wenlock Neighbourhood Plan. The suitability of any access to the site would also require highway approval. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 500m of ancient woodland so development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Area and Grade 2 Listed Building. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is not considered suitable for employment development, other than suitable recreation and tourism uses, as it is located in the open countryside and detached from the urban form of Much Wenlock and would constitute an isolated block of development. Furthermore, the suitability of any access to the site would also require highway approval. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 500m of ancient woodland so development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Area and Grade 2 Listed Building. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

MUW003	Currently Available	The site has been submitted for consideration within the Much Wenlock Neighbourhood Plan, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	Previously submitted for SHLAA. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable assessment and management of any physical, heritage and environmental impacts including the ability to provide an appropriate access to the site; and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site is not suitable as it has no road frontage and no access.
MUW006	Availability Unknown	The site is a broad location and Shropshire Council Officers have been unable to determine whether the site is available for development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	The site is a broad location and Shropshire Council Officers have been unable to determine whether the site is available for development. MUW010	The Grange, south of Much Wenlock	Much Wenlock	3.85	115	1.54	Greenfield site outside and away from development boundary. Site is currently in agricultural use for arable/fodder crops. Site is surrounded by agricultural land including the Grange farm complex and additional residential conversion on SW corner of site. Site is bounded by B4371 - Stretton Rd to N and disused rail line to SE. Boundaries defined by mature trees and established hedgerows on all sides. Site has road frontage and vehicle access to Stretton Rd. No existing pedestrian links cycle links and access via Stetton Rd to established network.	Agricultural	Not Suitable	The site is detached from the built form of the settlement. The site is also located outside and separated from the development boundary within the open countryside. As such open market residential development is contrary to policy in Core Strategy and SAMDev policy as well as the Much Wenlock Neighbourhood Plan. Therefore the site is not suitable. Furthermore the suitability of any access to the site is subject to highway approval. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is not considered suitable for employment development, other than suitable recreation and tourism uses, as it is located in the open countryside and detached from the urban form of Much Wenlock and would constitute an isolated block of development. Furthermore the suitability of any access to the site is subject to highway approval. The site is within 500m of a SSSI. Development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
MUW011	Bridge House, Much Wenlock	Much Wenlock	0.61	18	0.24	Brownfield site within development boundary on edge of built up area. Part of site is used for vehicle dismantling and storage and remainder for car parking. Car park on N portion of site is part of neighbouring SAMDev employment allocation. Site has road frontage and vehicle access from Stretton Rd although this is across the allocated employment site. Pedestrian and cycle access along Stretton Rd to established networks. Site boundaries are comprised of trees and hedgerows except ion NW corner where no physical boundary exists with SC freehold land. Site is bounded by car park to W; Stretton Rd and residential properties to N; and farmland to S.	Mixed including residential, commercial and agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site not suitable for residential development due to loss of committed employment land and constraints imposed by neighbouring employment uses. The site may have some long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide a satisfactory highway access is subject to highway approval. Consideration is necessary as to whether residential development on the site would have appropriate links into the settlement, as it is in a peripheral location with many services distant from it. The site is also within 500m of Wenlock Edge SSSI so development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.	Currently Suitable - Subject to Further Detailed Assessment	Site suitable for employment development due to use of committed employment land continued employment use and compatibility with neighbouring employment uses. The ability to provide a satisfactory highway access is subject to highway approval. Consideration is necessary as to whether residential development on the site would have appropriate links into the settlement, as it is in a peripheral location with many services distant from it. The site is also within 500m of Wenlock Edge SSSI so development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.
MUW012	Land adjoining the Primary School and Hunters Gate, Much Wenlock	Much Wenlock	3.81	114	1.52	Greenfield site outside but adjacent to development boundary. Currently in agricultural use for fodder/arable crops. Site is bounded by MW Primary school and Hunters Gate estate development to N and further residential development to E; by agricultural land to S and A458 and Oakfield Park estate development to W. Boundaries defined by hedgerows or fences with adjacent residential properties. Site has road frontage and vehicle access to A458 and Hunters Gate. Pedestrian and cycle access via same routes to existing networks.	Agricultural to south, residential to N and E.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is in countryside for policy purposes so not suitable. The site may have some long term potential if the policy position changes, and suitable management of any physical, heritage and environmental constraints is possible. Specifically the ability to provide an appropriate access to and into the site is subject to highway approval. Furthermore, the site is within 300m of Much Wenlock conservation area so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Site is in countryside for policy purposes, as such employment development is limited to suitable recreation and tourism uses. The site may have some long term potential for other forms of employment, if the policy position changes, and suitable management of any physical, heritage and environmental constraints is possible. Specifically the ability to provide an appropriate access to and into the site is subject to highway approval. Furthermore, the site is within 300m of Much Wenlock conservation area so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
MUW013	Land at Stretton Road, Much Wenlock	Much Wenlock	1.68	50	0.67	Agricultural field to the south west of Much Wenlock. The south east portion of the site is the subject of a Planning Permission for an attenuation pond.	Agricultural to the south east, south west and north west. Employment to the north east.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlements development boundary. It is also located some way from the centre of the settlement. Therefore residential development is contrary to policy. The site may have some long term potential, excluding the area to be used as an attenuation pond and an appropriate buffer, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide a satisfactory highway access is subject to highway approval. Consideration is necessary as to whether residential development on the site would have appropriate links into the settlement, as it is in a peripheral location with many services distant from it. The site is also within 500m of Wenlock Edge SSSI so development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlements development boundary. It is also located some way from the centre of the settlement. As such employment development is limited to appropriate recreation and tourism uses. The site may have some long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Consideration is necessary as to whether residential development on the site would have appropriate links into the settlement, as it is in a peripheral location with many services distant from it. The site is also within 500m of Wenlock Edge SSSI so development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.
MUW014	Land north of Stretton Road, Much Wenlock	Much Wenlock	0.50	15	0.20	Triangular shaped field located to the west of Much Wenlock. The site is bordered by a National Trust car park to the west, a footpath to the north, residential curtilages to the east and Stretton Road to the south.	Character to the north and west is predominantly agricultural/rural. Character to the east and south is residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to the site is subject to highway approval. The site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. Consequently, employment development on the site is limited to appropriate recreation or tourism uses, consistent with the Much Wenlock Neighbourhood Plan. The site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to the site is subject to highway approval. The site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

MUW010	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not considered suitable for development as it is located in the open countryside and detached from the urban form of Much Wenlock and would constitute an isolated block of estate development in an area of high landscape sensitivity.	Rejected	Availability, achievability and viability of the site are unknown. Furthermore the site is not considered suitable for employment development as it is located in the open countryside and detached from the urban form of Much Wenlock and would constitute an isolated block of development.
MUW011	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is an allocated employment site, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include whether residential development on the site would have appropriate links into the settlement, as it is in a peripheral location with many services distant from it. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. Suitability of the site for employment development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
MUW012	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include impacts on conservation area and satisfactory highway access. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be appropriate recreation or tourism uses. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically impacts on conservation area and satisfactory highway access. If suitable mitigation of this identified constraint were possible, the sites development potential for other forms of employment would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
MUW013	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for development and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
ODY001	Land at Fairview, Oldbury	Oldbury near Bridgnorth	0.96	29	0.38	The site is formed of a single dwelling and its large curtilage which also has two paddocks within. The site slopes down gently W-E. There is no development boundary to Oldbury and the site is adjacent to the conservation area	The surrounding area is characterised by dwellings in large curtilages. There is therefore a very low density in the surrounding area	Not Suitable	Oldbury is considered countryside and not a suitable location for development. The site is therefore located in the countryside and development in this location would therefore be contrary to policy. Furthermore, the site is located in proximity to a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of as conservation area and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	Oldbury is considered countryside and not a suitable location for development. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the site is located in proximity to a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of as conservation area and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
ODY002	Land to the North of Oldbury Church	Oldbury near Bridgnorth	2.68	80	1.07	The rectangular site sits between the northern perimeter of Oldbury village and the A458 and is used for agricultural purposes' site is bound by hedgerows.	The A458 runs to the north of the site which in turn separates the village from Bridgnorth. To the west of the site is a field in agricultural use whilst to the east is a further agricultural land and the rear of large dwellings and their curtilages. To the south is a small buffer of agricultural land which fronts on to the Oldbury Rd	Not Suitable	The site is separated from Bridgnorth by the A458, but is adjacent to the built form of Oldbury. It is therefore considered that development in this location would represent an extension of Oldbury Village. Oldbury is considered countryside and not a suitable location for development. The site is therefore located in the countryside and development in this location would therefore be contrary to policy. The ability to provide an appropriate access to this site would require significant consideration as it would likely have to be off the A458 as the site does not have a road frontage to the south. This would require highway approval. Furthermore, the site is located in proximity to a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of as conservation area, scheduled monument and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is separated from Bridgnorth by the A458, but is adjacent to the built form of Oldbury. It is therefore considered that development in this location would represent an extension of Oldbury Village. Oldbury is considered countryside and as such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the site is located in proximity to a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. MUW015	Availability Unknown	The site has been submitted through the Much Wenlock Neighbourhood Plan 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	The site has been submitted through the Much Wenlock Neighbourhood Plan 'call for sites' for a relevant use, and this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered achievable; and viable (subject to any further necessary viability assessment). The sites availability is unknown, where necessary this will be informed by discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is located outside the development boundary within the countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to confirmation of the its availability; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered achievable; and viable (subject to any further necessary viability assessment). The sites availability is unknown, where necessary this will be informed by discussions with landowners and/or their representatives. However the site is located outside the development boundary within the countryside, consequently suitable employment development on the site is limited to appropriate recreation or tourism uses, consistent with the Much Wenlock Neighbourhood Plan. The site may have long term potential for other forms of employment, subject to confirmation of the its availability; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.
MUW016	Currently Available	The site has been submitted through the Much Wenlock Neighbourhood Plan 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the Much Wenlock Neighbourhood Plan 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. OSW002	Health Centre/ Adult Training Centre, Victoria Rd, Oswestry	Oswestry	0.73	22	0.29	Edge of town centre triangular site bounded by Victoria Rd and Salop Rd with hedge / fence boundaries. Currently social care training and education centre.	Retail park on Salop Rd and retail to south. Police station to NW. residential dwellings adjoining and nearby.	Currently Suitable - Subject to Further Detailed Assessment	Suitable location subject to appropriate design and necessary assessments. Specifically the site is located within proximity of a scheduled monument, conservation area and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within proximity of a number of TPO's, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	Suitable location subject to appropriate design and necessary assessments. Specifically the site is located within proximity of a scheduled monument, conservation area and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW003	Oakfield Middleton Rd, Oswestry	Oswestry	0.36	11	0.14	Residential property with outbuildings on large triangular plot south of Middleton Rd and immediately adjacent to the SUE allocated in SAMDev	Residential to north and west, currently agricultural to south and east, but allocated as SUE	Currently Suitable - Subject to Further Detailed Assessment	Suitable location subject to appropriate design. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	Suitable location subject to appropriate design. Specifically, due to the sites size and its proximity to residential development it is likely that only employment uses sympathetic to its setting would be appropriate (office based employment). The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW005	Roy Evans Garage, Oak Street	Oswestry	0.07	5	0.03	Garage Services on well defined plot on urban largely residential street	Largely residential, primary school opposite	Currently Suitable - Subject to Further Detailed Assessment	The site is in a suitable location for residential development, subject to appropriate assessment and management of physical, heritage and environmental factors. Specifically, the site is located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also in proximity of a scheduled monument; one or more listed buildings; and a registered park/garden, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is in a suitable location for employment development and is already in employment use, subject to appropriate assessment and management of physical, heritage and environmental factors. Specifically, the site is located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also in proximity of a scheduled monument; one or more listed buildings; and a registered park/garden, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW006	Garages site, Whittington Road	Oswestry	0.23	7	0.09	Row of residential garages adjacent to Whittington Road. Long narrow site. Wooded boundaries	Residential to N, industrial to south and east	Currently Suitable - Subject to Further Detailed Assessment	The site is a windfall redevelopment site within the urban boundary that is considered suitable for residential development, subject to management of any physical, heritage and environmental constraints. Specifically the site contains two TPO's and is in proximity of a number of other TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is a windfall redevelopment site within the urban boundary that is considered suitable for employment development, subject to a sympathetic and complementary design, management of any physical, heritage and environmental constraints. Specifically the site contains two TPO's and is in proximity of a number of other TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

OSW001	Availability Unknown	The site was promoted within a previous SHLAA and there is no evidence to suggest that it is not available for development in the future.	Availability Unknown	It is uncertain whether this land would be available for employment development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	It is uncertain whether employment development would be viable in this location.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered suitable, viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. The site is considered suitable for development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically the site is located within a conservation area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on confirmation of its availability; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Whilst the site is considered suitable, its viability; achievability and availability are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives and any further necessary viability assessment work. The site is considered suitable for development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically the site is located within a conservation area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on confirmation of its availability; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW002	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	Employment development on the site is considered to be viable and achievable.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; achievable; and viable (subject to any further necessary viability assessment) for residential development. The site is considered to be not currently available, but is likely to become so. Where necessary, this will be informed by further discussions with landowners and/or their representatives. Suitability of the site for residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; achievable; and viable (subject to any further necessary viability assessment) for residential development. The site is considered to be not currently available, but is likely to become so. Where necessary, this will be informed by further discussions with landowners and/or their representatives. Suitability of the site for employment development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW003	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	It is uncertain whether employment development would be viable in this location.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for residential development. Suitability of the site for residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is suitable for development. Its availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site may have long term potential for employment uses which are sympathetic to the sites size and its proximity to residential development, subject to confirmation of the sites availability, achievability and viability; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW005	Not Currently Available - Likely to become so	The site has previously been submitted for inclusion within the SHLAA. Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	The site is currently in employment use. Shropshire Council Officers have investigated the availability of this site for alternative employment uses, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	It is uncertain whether employment development would be viable in this location.	Accepted - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). The site is also considered suitable for development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is suitable for development, subject to appropriate assessment and management of physical; environmental; and heritage constraints. Its availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site may have long term potential, subject to confirmation of the sites availability, achievability and viability; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW006	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
OSW007	Land east of Glentworth Close, Oswestry	Oswestry	1.33	40	0.53	Unbounded part of agricultural field east of Development Boundary and N of River Morda	Agricultural to East and residential to West. Electricity sub-station to N	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the development boundary by a swathe of open space. Therefore residential development on the site would be contrary to policy. The site does have some long term potential subject to appropriate policy changes, confirmation of an appropriate access to the site and consideration of site boundaries. Furthermore the site is in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the development boundary by a swathe of open space. As such employment development is limited to small scale rural enterprise and diversification schemes. The site does have some long term potential for other forms of employment, subject to appropriate policy changes, confirmation of an appropriate access to the site and consideration of site boundaries. Furthermore the site is in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW009	Oldport Farm, Gobowen Road, Oswestry	Oswestry	2.40	72	0.96	Farmhouse, yard and buildings bounded by Gobowen Rd to the East	Surrounded by agricultural land, with Oswestry residential area to the south and the scheduled Old Oswestry hillfort to the West	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to and separated from the Oswestry development boundary. Therefore residential development is contrary to policy. The site may have some long term potential subject to appropriate management of any physical, environmental or heritage constraints. Specifically, the site is in a sensitive location within proximity of the Old Oswestry Hillfort Scheduled Monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is in an isolated location, separated from the development boundary by an agricultural field and the road/railway line. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have some long term potential for other forms of employment, subject to appropriate management of any physical, environmental or heritage constraints. Specifically, the site is in a sensitive location within proximity of the Old Oswestry Hillfort Scheduled Monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
OSW013	The Town Field, Weston Lane, Oswestry	Oswestry	1.50	45	0.60	Garden land / grazing bounded by hedge to West, unbound to East.	Residential to W and N, agriculture to S & E	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. Therefore residential development on the site would be contrary to policy. However the site may have long term potential subject to appropriate policy changes and management of any physical, environmental and heritage constraints. Including the relatively poor vehicular and pedestrian access to the area, which would mean the suitability of an access to the site and into the surrounding area is subject to highway approval. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of appropriate employment (due to the location of the site, its surrounding uses and the potential points of access it is likely that only low trip generating office based employment would be appropriate) subject to appropriate policy changes and management of any physical, environmental and heritage constraints. Including the relatively poor vehicular and pedestrian access to the area, which would mean the suitability of an access to the site and into the surrounding area is subject to highway approval. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW014	Land South of The Cemetery, Oswestry	Oswestry	1.57	47	0.63	Unbound part of low lying grassland field, bounded by a wall against the cemetery to the north and hedges to the south and south west, unbound to east.	Cemetery to north, remainder of grassland field to east with former railway dividing this from B2 uses on Maesbury Rd, agricultural uses allocated in SAMDev as OSW034 & OSW035 to south west	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. Therefore residential development on the site would be contrary to policy. The site does have some future development potential subject to appropriate changes to policy and management of any physical, heritage and environmental constraints. Including the establishment of a suitable access into the site and from the site into the surrounding area. Consideration of site boundaries. An appropriate buffer to the adjacent cemetery. The site is also in proximity of a schedule monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. As such employment development is limited to small scale rural enterprise and diversification schemes. The site does have some future development potential for other forms of employment, subject to appropriate changes to policy and management of any physical, heritage and environmental constraints. Including the establishment of a suitable access into the site and from the site into the surrounding area. Consideration of site boundaries. An appropriate buffer to the adjacent cemetery. The site is also in proximity of a schedule monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW015	Land East of Oakhurst Road, Oswestry	Oswestry	4.43	133	1.77	Agricultural field rising to the west with highest point to the north west, with hillock features, bound by hedges. Ponds on site.	Agriculture to north (OSW038), residential to south. B4579 to West. Gatacre playing field to SW	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. Therefore residential development on the site would be contrary to policy. The site may have some long term potential subject to appropriate management of any physical, environmental or heritage constraints. Specifically, the site is in a sensitive location within proximity of the Old Oswestry Hillfort Scheduled Monument and Brogyntyn Registered Parkland, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The ability to provide an appropriate access to and into the site is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have some long term potential subject to appropriate management of any physical, environmental or heritage constraints. OSW017	Land at Trefonen Road, Oswestry	Oswestry	1.47	44	0.59	Part of agricultural field, unbound to W, bounded by Trefonen Rd to S. Opposite playing field to South, on the edge of Oswestry and outside the current development boundary	Residential to N and E, Trefonen Rd and playing fields to South, agricultural to West	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. Therefore residential development on the site would be contrary to policy. However the site may have long term potential subject to policy change, consideration of site boundaries and the management of any constraints. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment, subject to policy change, consideration of site boundaries and the management of any constraints. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW018a	Land near Weston Lane, Oswestry	Oswestry	2.24	67	0.90	Agricultural grazing land falling to a water course along eastern boundary. Bounded by hedges to S and E, unbound to W and N	OSW013 to W, SAMDev allocation OSW035 to N and agricultural land OSW026 to S and E	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. Therefore residential development on the site would be contrary to policy. However the site may have long term potential subject to appropriate policy changes; demonstration of the ability to provide an appropriate access to the site and from the site into the surrounding area; consideration of site boundaries; and management of any other physical, environmental or heritage constraints. For instance the site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment, subject to appropriate policy changes; demonstration of the ability to provide an appropriate access to the site and from the site into the surrounding area, which is a particular concern for employment development and may well restrict employment uses to those with low vehicular movements; consideration of site boundaries; and management of any other physical, environmental or heritage constraints. For instance the site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW021	Llys Hill, Middleton Road, Oswestry	Oswestry	0.36	11	0.15	Llys Hill is a detached property standing in large grounds, accessed via a private drive off Middleton Road. Site is set back from Middleton Road behind a nursing home which adjoins the access drive to the west.	The site is surrounded by residential development on all sides.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within a residential area of Oswestry. It is located within the development boundary and therefore its redevelopment would be consistent with policy - subject to the specific scheme. The site is within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within a residential area of Oswestry. It is located within the development boundary and therefore its redevelopment would be consistent with policy - subject to the specific scheme. Due to the sites setting, within a primarily residential area, the specific scheme and types of employment (likely to be office based) would need to complement this location. The site is within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW023	Land off Mount Road, Oswestry	Oswestry	4.99	150	2.00	Part of agricultural field bound by hedges to S, E & N, but unbound to W. Part wooded	Croes residential area to East (High Fawr Ave), Mount Rd to N and agricultural land to W	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. Therefore residential development on the site would be contrary to policy. The site may have long term potential for development subject to appropriate policy changes, consideration of the boundary to the west of the site, and management of physical, environmental and heritage constraints. Specifically the site is located within proximity of a listed building, conservation area and registered parkland, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also located within proximity of a number of TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Oswestry. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment development subject to appropriate policy changes, consideration of the boundary to the west of the site, and management of physical, environmental and heritage constraints. As the developed area to the east of the site is predominantly residential, any development on this site would need to complement these adjacent uses (likely office based employment) and provide an appropriate buffer. Furthermore the site is located within proximity of a listed building, conservation area and registered parkland, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also located within proximity of a number of TPO's, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW026	Land north of Weston Lane, Oswestry	Oswestry	6.78	203	2.71	Large flat open field, currently in arable use, situated within a wider tract of open land which separates the main Oswestry industrial area to the east and established residential areas to the west.	The sites immediate surroundings are predominantly agricultural. However there are areas of residential to the west and areas allocated for residential development to the north of the site, these are adjacent to the site in parts but adjacent fields form an area of separation in others. There is also an employment area to the east of the site separated by further agricultural fields and a main road.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to (in part on its western and northern boundary) but outside the development boundary therefore it is currently classified as countryside. Consequently residential development would be contrary to policy. However the site may have long term potential subject to a policy change and management of the physical, heritage and environmental constraints present. For instance the site has poor vehicular and pedestrian access. The site contains and is in proximity of a number of veteran trees, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to (in part on its western and northern boundary) but outside the development boundary therefore it is currently classified as countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have long term potential for other forms of employment, subject to a policy change and management of the physical, heritage and environmental constraints present. For instance the site has poor vehicular and pedestrian access which is a particular constraint for employment development and may impact on the types of employment that are suitable. The site contains and is in proximity of a number of veteran trees, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

OSW017	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	It is uncertain whether employment development would be viable in this location.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, achievable and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. The associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW018a	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW021	Currently Available	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but it is understood that there remains development interest; the site is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been the subject of either a lapsed Planning Application for an alternative use and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for residential development. Suitability of the site for residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is suitable for development. Its availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site may have long term potential, subject to confirmation of the sites availability, achievability and viability; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW023	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. OSW026	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	It is uncertain whether this land would be available for employment development. The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify this matter. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically, it is unclear how an appropriate access to the site could be achieved. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Oswestry offers a range of services and facilities suitable to meet the needs of potential occupiers of the site, but access to these services is poor.	Long Term Potential - Subject to Further Detailed Assessment	The sites availability, achievability and viability are unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically, it is unclear how an appropriate access to the site could be achieved, this is a particular constraint for employment development and may constrain the types of employment that are suitable, if any employment uses are considered appropriate. If suitable mitigation of this identified constraint were possible, the sites development potential for other forms of employment would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Oswestry offers a range of services and facilities suitable to meet the needs of potential occupiers of the site, but access to these services is poor.

Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
OSW027	Land at Weston Cotton Farm, Weston Lane, Oswestry	Oswestry	0.70	21	0.28	Unbound part of agricultural field	Hamlet of Weston to S. Fishing pools and farms with agricultural land to N and E	Not Suitable	The site is located outside and detached from the development boundary within the countryside. Consequently residential development on the site would be contrary to policy. Ultimately the site is unsuitable for development due to flood risk constraints to the majority of the site, access to the remainder (which would be have to be through areas within the flood zone); access constraints to the entirety of the site. The site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere. Furthermore the site is located within proximity of one or more listed buildings, therefore any development would be subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is located outside and detached from the development boundary within the countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. Ultimately the site is unsuitable for development due to flood risk constraints to the majority of the site, access to the remainder (which would be have to be through areas within the flood zone); access constraints to the entirety of the site. The site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere. Furthermore the site is located within proximity of one or more listed buildings, therefore any development would be subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW028	Land at Brogyntyn Park, Oswestry	Oswestry	11.98	359	4.79	Agricultural field enclosed by hedges which forms part of registered parkland of Brogyntyn Hall	Built area of Oswestry is to the S, E & W, Brogyntyn Hall and parkland to the N	Not Suitable	The site is located adjacent to (bounded on three sites - east, west and south) but outside the development boundary. Therefore residential development on the site would be contrary to policy. Furthermore, part of the site is identified as a community park/garden. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Ultimately development on the site would be unsuitable due to impact on protected historic environment assets including the registered historic park; conservation area; and listed building. The site contains and is within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded.	Not Suitable	The site is located adjacent to (bounded on three sites - east, west and south) but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, part of the site is identified as a community park/garden. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The entirety of the site is included within a registered park/garden. Ultimately development on the site would be unsuitable due to impact on protected historic environment assets including the registered historic park; conservation area; and listed building. The site also contains an area of public open space which could potentially be lost as part of its development. The site contains and is within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded.
OSW029	Central Car Park and adjoining land, Oswestry	Oswestry	1.61	48	0.64	Town centre car park	Town centre uses to North, East & West, residential streets to South.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Oswestry development boundary. It is potentially suitable for redevelopment in part subject to further assessment of the need for the car park (in active uses) and alternative provision. The site is located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also in proximity of a scheduled monument and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Oswestry development boundary. It is potentially suitable for redevelopment in part subject to further assessment of the need for the car park (in active uses) and alternative provision. The site is located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also in proximity of a scheduled monument and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW032	Land between Trefonen Road and Penyllan Lane, South of Oswestry	Oswestry	13.36	401	5.34	This site consists of pastoral parkland and playing fields bounded by hedges and a boundary wall to Trefonen Rd. It forms part of the Pen-y-lan estate on the south western edge of Oswestry and occupies gently sloping land between the B4579 (Trefonen Road) and Penyllan Lane. The northern part of the site is currently used as playing fields by the neighbouring school; the southern half is pastoral parkland with many mature deciduous trees.	The site has school playing fields to the east and south, and agricultural land to the west. There is residential development to the north on the Trefonen Road.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Gateway site with moderate landscape character approaching Oswestry from the West. The site is located adjacent to (northern portion of the site) but outside the Oswestry development boundary. Therefore residential development would be contrary to policy. Furthermore, approximately 25% of the site comprises an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site does however have long term potential subject to appropriate mitigation of any physical, heritage and environmental constraints. For instance the site is adjacent to a listed building therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is part of a relic parkland landscape, whilst archaeological evaluation of parts of the site have been completed, assessment of archaeological earthworks elsewhere would be required prior to submission of an application. Archaeological mitigation will also be necessary. The site is also in proximity of a veteran tree and trees subject to a TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to (northern portion of the site) but outside the Oswestry development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The sites gateway location means that any employment uses on the site would need to reflect the prominence of the site. Furthermore, approximately 25% of the site comprises an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site does however have long term potential for other forms of employment, subject to appropriate mitigation of any physical, heritage and environmental constraints. For instance the site is adjacent to a listed building therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is part of a relic parkland landscape, whilst archaeological evaluation of parts of the site have been completed, assessment of archaeological earthworks elsewhere would be required prior to submission of an application. Archaeological mitigation will also be necessary. The site is also in proximity of a veteran tree and trees subject to a TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW037	Land at Mile Oak, Oswestry	Oswestry	0.72	21	0.29	Agricultural field within Oswestry bypass and adjacent to allocated employment site	Former railway to W, Maesbury Rd to N, agricultural uses	Not Suitable	The site is located adjacent to (northern portion of the site) but outside the Oswestry development boundary. Therefore residential development would be contrary to policy. Ultimately the site is unsuitable for development as it is subject to significant flood risk and the remainder cannot be safely accessed. The site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere. The site is also in proximity of a scheduled monument and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is located adjacent to (northern portion of the site) but outside the Oswestry development boundary. OSW027	Availability Unknown	The site was promoted within a previous SHLAA. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). The sites availability is unknown, where necessary this will be informed by discussions with landowners and/or their agents. However the site is not considered suitable for development as the majority of the site is located within flood zones 2 and 3, the remainder can only be accessed through the areas of flood risk. The site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere. The site would only be suitable for development if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere. Additionally there are access constraints to the entirety of the site.	Rejected	Availability, achievability and viability of the site are unknown. However the site is not considered suitable for development as the majority of the site is located within flood zones 2 and 3, the remainder can only be accessed through the areas of flood risk. Additionally there are access constraints to the entirety of the site.
OSW028	Availability Unknown	The site was promoted within a previous SHLAA. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
OSW038	Land east of Oakhurst Road, north of Oswestry	Oswestry	7.75	232	3.10	Agricultural field bound by hedges	Oakhurst (large residential property) to NW. B4579 and single residential property to W. agriculture surrounds remainder. Old Oswestry Hillfort is 300m East, Brogyntyn Park (Registered Park) to the west	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the Oswestry development boundary. Therefore residential development is contrary to policy. The site may have some long term potential subject to appropriate management of any physical, environmental or heritage constraints. Specifically, the site is in a sensitive location within proximity of the Old Oswestry Hillfort Scheduled Monument and the Brogyntyn Registered Parkland, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Archaeological evaluation of the site is also necessary. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. There is also possible earthwork remains of ridge and furrow present on site - archaeological mitigation likely to be required post-determination.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary therefore employment development is limited to small scale rural enterprise and diversification schemes. The site may have some long term potential for other forms of employment subject to appropriate management of any physical, environmental or heritage constraints. Specifically, the site is in a sensitive location within proximity of the Old Oswestry Hillfort Scheduled Monument and the Brogyntyn Registered Parkland, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. There is also possible earthwork remains of ridge and furrow present on site - archaeological mitigation likely to be required post-determination.
OSW040	Land off Gobowen Road, north of Jasmine Gardens	Oswestry	4.25	128	1.70	The site is a pasture used for horse grazing which rises up to form the lower slopes of a distinctive wooded knoll on the northern outskirts of Oswestry. It is separated from the B5069 approach road and from land to the north west by low cut hedges. A small watercourse/ditch follows the contours of the hillside creating a slight indentation in the landform. The site is visible on the northern approaches to the settlement and acts as part of the setting to Old Oswestry Fort and to the wooded knoll which together act as distinctive landmarks in the landscape north of the settlement. A rural farm complex lies to the north. The site is sensitive as a prominent and attractive part of the rising landform, its role as setting to the hillfort and as a buffer between the rural farmstead at Oldport and the settlement.	Oldport Farm is to the north, with the hill fort to the north west, a wooded hill to the west, Jasmine Gardens housing development to the south, and the Gobowen Road and former railway to the east.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the Oswestry development boundary. Therefore residential development is contrary to policy. The site may have some long term potential subject to appropriate management of any physical, environmental or heritage constraints. Specifically, the site is in a sensitive location within proximity of the Old Oswestry Hillfort Scheduled Monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
OSW042	Everglades, Brynhafod Lane	Oswestry	0.24	7	0.10	Existing residential curtilage	Residential	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Oswestry development boundary within a predominantly residential area. Therefore residential development on the site could be appropriate. However the constraints are such that it is considered unlikely that there is sufficient net developable area to achieve five dwellings. Specifically the site contains and is in proximity of a number of other TPO's therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. An Arboriculture Report suggests reduced net developable area. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Oswestry development boundary within a predominantly residential area. Employment development on the site could be appropriate, but due to the primarily residential area any employment uses on the site would need to reflect this context - likely to be office based. However the constraints are such that it is considered unlikely that there is sufficient net developable area to achieve five dwellings. Specifically the site contains and is in proximity of a number of other TPO's therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. An Arboriculture Report suggests reduced net developable area. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW043	Welsh Border Meats, Willow Street	Oswestry	0.06	5	0.03	Small site comprising the Welsh Border Meats building and carparking. Narrow site with a frontage at either end on to Willow Street and Oak Street.	Typical edge of town centre location surrounded by a mix of residential, commercial and other uses.	Currently Suitable - Subject to Further Detailed Assessment	The site is located on the edge of the town centre within the Oswestry development boundary. The surrounding area contains a mix of uses including many residential properties. As such it is an appropriate location for residential development. The site is within proximity of one or more listed buildings; a conservation area; a scheduled monument; and a registered park and garden. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located on the edge of the town centre within the Oswestry development boundary. The surrounding area contains a mix of uses. As such it is an appropriate location for employment development. The site is within proximity of one or more listed buildings; a conservation area; a scheduled monument; and a registered park and garden. Development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW044	Land off Croeswylan Lane, Oswestry	Oswestry	1.00	30	0.40	The site is located on the south-western edge of Oswestry on land off Croeswylan Lane and north of the River Morda. The site is relatively prominent visually and forms part of the Morda Valley green corridor. Mature trees and hedgerow along Croeswylan Lane and Love Lane.	There is agricultural land on all sides except existing residential properties fronting Croeswylan Lane and to the east.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the Oswestry development boundary. As such residential development is contrary to policy. However it may be suitable in the longer term, subject to management of access constraints and mitigation of landscape and visual impact.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the Oswestry development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However it may be suitable for other forms of employment in the longer term, subject to management of access constraints, which are a particular issue for employment development and mitigation of landscape and visual impact. The site is also sloping which is a potential constraint to employment development.

OSW038	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered achievable; and viable (subject to any further necessary viability assessment). Its availability is unknown where necessary this will be informed by discussions with the landowners and/or their representatives. However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is in proximity of the Old Oswestry Hillfort and Brogyntyn Registered Parkland. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is in proximity of the Old Oswestry Hillfort and Brogyntyn Registered Parkland. If suitable mitigation of this identified constraint were possible, the sites development potential for other forms of employment would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW040	Currently Available	The site was represented during the SAMDev process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW042	Not Available	The site is currently occupied and has the benefit of Planning Permission to extend the existing property (annexe) and consequently there is not confidence that it will be available for this form of development. Therefore information gathered for the purposes of this study suggests that the site is not currently available and is unlikely to become so for this form of development.	Not Available	he site is currently occupied and has the benefit of Planning Permission to extend the existing property (annexe) and consequently there is not confidence that it will be available for this form of development. Therefore information gathered for the purposes of this study suggests that the site is not currently available and is unlikely to become so for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). It is not however considered available. Whilst the site is considered suitable for residential development, the constraints are such that it is considered unlikely that there is sufficient net developable area to achieve five dwellings.	Rejected	Achievability and viability are unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. It is not however considered available. Whilst the site is considered suitable for employment development compatible with the sites setting, the constraints are such that it is considered unlikely that there is sufficient net developable area to achieve 500m2 of floorspace.
OSW043	Not Currently Available - Likely to become so	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for residential development. Suitability of the site for residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is suitable for development. Its availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site may have long term potential, subject to confirmation of the sites availability, achievability and viability; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
OSW044	Currently Available	The site was represented during the SAMDev Site Allocations process for an alternative use, and it is understood that the landowner/developer has specified that it is only available for this alternative use. Therefore information gathered for the purposes of this study suggests that the site is not available for this form of development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. OSW045	Autocare, King Street, Oswestry	Oswestry	0.02	5	0.01	Small site comprising a single storey garage/workshop at the junction of King Street and Eden Street, north east of the town centre. The existing building is of little architectural merit.	The surrounding area is mainly residential in character, with a variety of commercial uses nearby.	Currently Suitable - Subject to Further Detailed Assessment	This brownfield site is suitable for development, subject to assessment and management of identified constraints. Specifically the site is located within a conservation area. Therefore development of this site is subject to an assessment of impact on the specified asset(s). Where this shows that substantial harm to or a total loss of significance of the designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is in proximity of one or more listed buildings and a scheduled monument. Development is therefore subject to an assessment of impact on the significance of the setting of this heritage asset(s). Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity of a wildlife site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Thus, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	This brownfield site is suitable for development, subject to assessment and management of identified constraints. OSW046	Land to the West of Llwyn Road, Oswestry	Oswestry	8.66	260	3.47	Agricultural field to the west of Llwyn Road. The site is separated from the built form of Oswestry by an area of public open space (outdoor sports).	Character to the north, and west is agricultural. Character to the south is public open space. Character to the east is agricultural but also includes the significant feature of the Oswestry Hillfort.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the development boundary by an area of open space (outdoor sports). Therefore residential development on the site would be contrary to policy. The site may have some long term potential subject to appropriate management of any physical, environmental or heritage constraints. Specifically, the site is in a sensitive location within proximity of the Old Oswestry Hillfort Scheduled Monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Archaeological evaluation of the site is also necessary. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the development boundary by an area of open space (outdoor sports). As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have some long term potential for other forms of employment subject to appropriate management of any physical, environmental or heritage constraints. Specifically, the site is in a sensitive location within proximity of the Old Oswestry Hillfort Scheduled Monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Archaeological evaluation of the site is also necessary. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. OSW047	Land to the north west of Gatacre Avenue, Oswestry	Oswestry	9.73	292	3.89	An agricultural field containing a pond located to the north of Oswestry.	Character to the north, east and north west is predominantly agricultural. Character to the west is public open space. Character to the south is predominantly residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is adjacent to but outside the development boundary. Therefore residential development on the site would be contrary to policy. The site may have some long term potential subject to appropriate management of any physical, environmental or heritage constraints. Specifically, the site is in a sensitive location within proximity of the Old Oswestry Hillfort Scheduled Monument; the Brogyntyn Registered Parkland and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Archaeological evaluation of the site is also necessary. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site also contains a veteran tree, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have some long term potential for other forms of employment, subject to appropriate management of any physical, environmental or heritage constraints. Specifically, the site is in a sensitive location within proximity of the Old Oswestry Hillfort Scheduled Monument; the Brogyntyn Registered Parkland and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Archaeological evaluation of the site is also necessary. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site also contains a veteran tree, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW048	Land at Weston Farm, Oswestry	Oswestry	15.21	456	6.08	The majority of two agricultural fields associated with Weston Farm, located to the east of Weston Lane and west of the railway line and Mile End Industrial Estate.	Land to the east is commercial. Land to the south is a mix of agricultural, commercial and land used for camping. Land to the west is predominantly agricultural. Land to the north is a mix of agricultural, land allocated for housing and a cemetery.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the development boundary by the railway line (currently unused). Therefore residential development on the site would be contrary to policy. The site, outside of the area located within flood zone 2, does have some long term potential subject to appropriate policy changes, confirmation of an appropriate access to the site and consideration of site boundaries. Furthermore the site contains a number of veteran trees, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a listed building and a scheduled monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the development boundary by the railway line (currently unused). As such employment development is limited to small scale rural enterprise and diversification schemes. The site, outside of the area located within flood zone 2, does have some long term potential for other forms of employment subject to appropriate policy changes, confirmation of an appropriate access to the site and consideration of site boundaries. Furthermore the site contains a number of veteran trees, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a listed building and a scheduled monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
OSW049	Land to the north west of the Water Works, Oswestry	Oswestry	6.98	209	2.79	The site comprises two agricultural fields to the west of Oswestry. The site is separated from the built form of the settlement by an adjacent site within the same ownership.	Land to the north, west and east is predominantly agricultural. Land to the south is mixed consisting of agricultural and the Water Works.	Not Suitable	The site is separated from the built form of the settlement and its development boundary by an adjacent agricultural field, albeit in the same ownership. Therefore open market residential development is contrary to policy. Furthermore, the ability to provide an appropriate access to and into the site is reliant on the development of an adjacent site and access being provided through it (albeit the site is in the same ownership), consequently the site in isolation is not suitable, although it may have long term potential as part of a wider scheme. For information, in order to access the adjacent site, demolition of an existing bungalow off an estate road (presumed to be in the same ownership) is required, the suitability of an access to and into the adjacent site from this location would be subject to highway approval. The ability of this access to serve this additional site is also subject to highway approval. The site also contains and is in proximity of veteran trees, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is adjacent to a sewerage treatment works, which will require due consideration.	Not Suitable	The site is separated from the built form of the settlement and its development boundary by an adjacent agricultural field, albeit in the same ownership. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the ability to provide an appropriate access to and into the site is reliant on the development of an adjacent site and access being provided through it (albeit the site is in the same ownership), consequently the site in isolation is not suitable, although it may have long term potential as part of a wider scheme. For information, in order to access the adjacent site, demolition of an existing bungalow off an estate road (presumed to be in the same ownership) is required, the suitability of an access to and into the adjacent site from this location would be subject to highway approval. The ability of this access to serve this additional site is also subject to highway approval. The site also contains and is in proximity of veteran trees, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is adjacent to a sewerage treatment works, which will require due consideration.

OSW045	Not Currently Available - Likely to become so	The site has been the subject of a series of lapsed Planning Permissions for a relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. There have been a number of applications for an alternative use approved on the site. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). The site is also considered suitable for development subject to appropriate assessment and management of any impact on the physical, environmental; or heritage constraints to the site. Specifically the sites location within a conservation area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. The site is considered suitable for development subject to appropriate assessment and management of any impact on the physical, environmental; or heritage constraints to the site. Specifically the sites location within a conservation area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW046	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary		
OSW050	Land at Oerley Way, Oswestry	Oswestry	6.14	184	2.46	The site comprises two agricultural fields to the west of Oswestry.	Land to the north and west is predominantly agricultural. Land to the east is predominantly residential. Land to the south is characterised by the Water Works.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. Therefore open market residential development on the site would be contrary to policy. However the site may have some long term potential subject to appropriate policy changes, confirmation of and management of the physical, environmental and heritage constraints present. Specifically the ability to provide an appropriate access to and into the site is reliant on the demolition of an existing bungalow off an estate road (presumed to be in the same ownership), the suitability of an access to and into the site from this location would be subject to highway approval. The site is adjacent to an sewerage treatment works, which will require due consideration. The site slopes upwards towards the west, and is elevated over the adjacent settlement, the relationship between the site and adjacent dwellings requires careful consideration. The site also contains and is in proximity of veteran trees, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site may have some long term potential for other forms of employment, subject to appropriate policy changes, confirmation of and management of the physical, environmental and heritage constraints present. The site also contains and is in proximity of veteran trees, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.		
OSW051	Weston Lane, Oswestry	Oswestry	0.32	10	0.13	Pasture/recreation land with a number of mature trees in and around the sites boundaries.	Character to the north and west is predominantly residential. Character to the south is mixed residential and agricultural. Character to the east is predominantly agricultural (although this land is allocated for residential development).	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Oswestry development boundary adjacent to sites allocated for housing development. Therefore open market residential development on the site is likely to be appropriate. However, the ability to provide an appropriate access into the site is subject to highway approval. Furthermore, the site is within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Oswestry development boundary adjacent to sites allocated for housing development. Therefore employment development on the site is likely to be appropriate. However, the ability to provide an appropriate access into the site is subject to highway approval. As the nearby built form is primarily residential, any employment on the site would need to complement these uses (likely to be office based). Furthermore, the site is within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.		
OSW052	Land east of The Hollies, Middleton Road, Oswestry	Oswestry	1.59	48	0.63	An agricultural field to the east of Oswestry and the A5. The site is separated from the A5 by a residential property The Hollies.	Surrounding character is predominantly agricultural. There is however a dwelling adjacent to the site and land to the west (other side of the A5) is an allocated sustainable urban extension and land to the south (separated from this site by another agricultural field) is an employment allocation.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the settlement development boundary. As such open market residential development is contrary to policy. Subject to appropriate policy changes and management of any physical, heritage and environmental constraints present, the site may have long term potential. Such constraints include the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also separated from the built form of Oswestry by the A5 a significant physical barrier which has significant implications for residential amenity.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Subject to appropriate policy changes and management of any physical, heritage and environmental constraints present, the site may have long term potential for other forms of employment development. Such constraints include the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also separated from the built form of Oswestry by the A5 a significant physical barrier, however this is likely to be less problematic for employment development.		
OSW053	Land at Mile End East, Oswestry	Oswestry	9.13			Large strategic employment allocation consisting of a series of agricultural fields to the east of Mile End Roundabout and east/north of the A5. Character to the west is a mixture of agriculture (land allocated for mixed use residential and employment development) retail and employment.	Character to the north and east is predominantly agricultural. Character to the south is predominantly agricultural although there is a service station (opposite the site to the south of the A5) providing such services as restaurants; a petrol station; a hotel etc. Character to the west is a mixture of agriculture (land allocated for mixed use residential and employment development) retail and employment.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. As such residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of Oswestry by the A5, a significant physical barrier which has significant implications for residential amenity. The ability to provide an appropriate access to and into the site is subject to highway approval.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of Oswestry by the A5, a significant physical barrier. The ability to provide an appropriate access to and into the site is subject to highway approval.	Currently Available	The site has been allocated for employment development. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.

OSW050	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access to and into the site is reliant on the demolition of an existing bungalow off an estate road (presumed to be in the same ownership), the suitability of an access to and into the site from this location would be subject to highway approval. The site is adjacent to a sewerage treatment works, which will require due consideration. The site slopes upwards towards the west, and is elevated over the adjacent settlement, the relationship between the site and adjacent dwellings requires careful consideration. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access to and into the site is reliant on the demolition of an existing bungalow off an estate road (presumed to be in the same ownership), the suitability of an access to and into the site from this location would be subject to highway approval. The site is adjacent to a sewerage treatment works, which will require due consideration. The site slopes upwards towards the west, and is elevated over the adjacent settlement, the relationship between the site and adjacent dwellings requires careful consideration. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW051	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for residential development. Suitability of the site for residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Specifically, the ability to provide an appropriate access into the site is subject to highway approval. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is suitable for development, although as the nearby built form is primarily residential, any employment on the site would need to complement these uses (likely to be office based). Suitability of the site for residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Specifically, the ability to provide an appropriate access into the site is subject to highway approval. However, the site may have long term potential, subject to confirmation of the sites availability, achievability and viability. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
OSW052	Not Currently Available - Likely to become so	The site was represented during the SAMDev Site Allocations process for a relevant use. It is understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, once the site becomes available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is not currently available, but likely to become so. The site is also considered achievable and viable. However, the site is not considered suitable for development as it is located outside the settlement development boundary, as such residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. A particular constraint to residential development on this site is its separation from the built form of Oswestry by the A5, which is a significant physical barrier. There is also a need to consider whether an appropriate vehicular access can be provided to and into the site.	Long Term Potential - Subject to Further Detailed Assessment	The sites availability, achievability and viability are unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. However, the site is located outside the settlement development boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to availability, achievability and viability; appropriate policy changes; and management of any physical, heritage and environmental constraints. A particular constraint to residential development on this site is its separation from the built form of Oswestry by the A5, which is a significant physical barrier. There is also a need to consider whether an appropriate vehicular access can be provided to and into the site.
OSW053	Currently Available	The site has been allocated for employment development. Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	The site has been allocated for employment development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. OSW054	Land east of the Employment Allocation at Mile End, Oswestry	Oswestry	18.68	560	7.47	A large site consisting of two agricultural fields to the east of an employment allocation. The site is bounded to the south by the A5.	Surrounding character is predominantly agricultural. The site to the west is allocated for employment development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary (the site is adjacent to an employment allocation). As such open market residential development is contrary to policy. Subject to appropriate policy changes and management of any physical, heritage and environmental constraints present, the site may have long term potential. Such constraints include that the site is some distance from the current built form of Oswestry (the site is adjacent to an employment allocation). The ability to provide an appropriate access to and into the site is subject to highway approval. The site is separated from the built form of Oswestry by the A5 a significant physical barrier which has significant implications for residential amenity.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary (the site is adjacent to an employment allocation). As such employment development is limited to small scale rural enterprise and diversification schemes. Subject to appropriate policy changes and management of any physical, heritage and environmental constraints present, the site may have long term potential for other forms of employment. Such constraints include that the site is some distance from the current built form of Oswestry (the site is adjacent to an employment allocation). The ability to provide an appropriate access to and into the site is subject to highway approval. The site is separated from the built form of Oswestry by the A5 a significant physical barrier which has significant implications for residential amenity.
OSW055	Land north of the Employment Allocation at Mile End, Oswestry	Oswestry	10.95	328	4.38	A large site consisting of an agricultural field to the north of an employment allocation. The site is bounded to the west by the A5.	Surrounding character is predominantly agricultural. The site to the south is allocated for employment development and to the west for a mixed use development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary (the site is adjacent to an employment allocation). As such open market residential development is contrary to policy. Subject to appropriate policy changes and management of any physical, heritage and environmental constraints present, the site may have long term potential. Such constraints include the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also separated from the built form of Oswestry by the A5 a significant physical barrier which has significant implications for residential amenity.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary (the site is adjacent to an employment allocation). As such employment development is limited to small scale rural enterprise and diversification schemes. Subject to appropriate policy changes and management of any physical, heritage and environmental constraints present, the site may have long term potential for other forms of employment. Such constraints include the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also separated from the built form of Oswestry by the A5 a significant physical barrier which has significant implications for residential amenity.
OSW056	Land west of White House Farm, Middleton Road	Oswestry	1.51	45	0.60	Irregularly shaped agricultural field located to the south of Middleton Road and west of White House Farm .	Surrounding character is predominantly agricultural, although there are several farmsteads/farmhouses in proximity.	Not Suitable	The site is separated from the development boundary by agricultural fields and is in an isolated location. As such it is unsuitable for open market residential development. The site is also separated from the built form of Oswestry by the A5. The ability to provide an appropriate access to and into the site is subject to highway approval.	Not Suitable	The site is separated from the development boundary by agricultural fields and is in an isolated location. As such employment development is limited to small scale rural enterprise and diversification schemes. The site is also separated from the built form of Oswestry by the A5, however this is less problematic for employment development. The ability to provide an appropriate access to and into the site is subject to highway approval.
OSW057	Land south of Middleton Road, Oswestry	Oswestry	2.09	63	0.84	Rectangular shaped agricultural field located to the south of Middleton Road.	Surrounding character is predominantly agricultural, although there are several farmsteads/farmhouses in proximity.	Not Suitable	The site is separated from the development boundary by agricultural fields and is in an isolated location. As such it is unsuitable for open market residential development. The site is also separated from the built form of Oswestry by the A5. The ability to provide an appropriate access to and into the site is subject to highway approval.	Not Suitable	The site is separated from the development boundary by agricultural fields and is in an isolated location. As such employment development is limited to small scale rural enterprise and diversification schemes. The site is also separated from the built form of Oswestry by the A5, however this is less problematic for employment development. The ability to provide an appropriate access to and into the site is subject to highway approval.
OSW058	Land north of Whittington Road and west of the A5, Oswestry	Oswestry	7.38	222	2.95	The site consists of parts of two irregularly shaped agricultural fields to the north of an existing residential allocation (which represents the other parts of these two agricultural fields).	Character to the north and west is predominantly agricultural. The Old Oswestry Hillfort is located to the west of the site. To the south are residential dwellings; agricultural land allocated for residential development; commercial properties and associated curtilages; and a large electricity distribution site.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the most appropriate access point is likely through the adjacent allocated site, therefore this site would likely only be developed following the existing allocation. The ability to provide an appropriate access is subject to highway approval. The site is in proximity to a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of a scheduled monument - the Old Oswestry Hillfort, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is in proximity of the Old Oswestry Hillfort scheduled monument. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However as the site is located in open countryside; consequently suitable employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is in proximity of the Old Oswestry Hillfort scheduled monument. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Suitability for other forms of employment development is also subject to appropriate changes to policies affecting this location; and for other forms of employment development. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

OSW060	Land south of Whittington Road, Oswestry	Oswestry	27.42	823	10.97	Large strategic employment allocation consisting of a series of agricultural fields to the east of the A5 and south of the A495.	Character to the south and east is agricultural. Character to the north is a mix of agricultural and commercial. Character to the west is primarily urban fringe and residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. As such residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of Oswestry by the A5, a significant physical barrier which has significant implications for residential amenity. The ability to provide an appropriate access to and into the site is subject to highway approval.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of Oswestry by the A5, a significant physical barrier. The ability to provide an appropriate access to and into the site is subject to highway approval.
OSW062	Land north of Whittington Road, Oswestry	Oswestry	1.85	56	0.74	The site is an triangular sites consisting of an agricultural field located between the A5, A495 and Artillery Business Park.	Character to the south is agricultural (allocated for employment development) and infrastructure (an electric sub-station). Character to the north is primarily open space. Character to the west is predominantly agricultural. Character to the east is a mixture of residential and employment.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. As such residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of Oswestry by the A5, a significant physical barrier which has significant implications for residential amenity. The ability to provide an appropriate access to and into the site is subject to highway approval.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of Oswestry by the A5, a significant physical barrier. The ability to provide an appropriate access to and into the site is subject to highway approval.
OSW063	North eastern element of the United Utilities Sewage Treatment Works, Oswestry	Oswestry	4.27	128	1.71	The site forms part of the United Utilities Sewage Treatment Works to the west of Oswestry. The site is located to the north east of the site, adjacent to the residential development within the Oswestry development boundary.	Surrounding uses include the remainder of the sewage treatment works; residential development and agricultural land.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site currently forms part of a sewerage treatment works, therefore site investigation and management of any contamination will be necessary. Parts of the sewage treatment works will remain in use and this site will therefore be adjacent to an sewage treatment works, which will require due consideration. The likely access appears to be through other parts of the sewage treatment works (although much of this area has also been promoted for development), the suitability of this access, particularly for residential development, is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site currently forms part of a sewage treatment works, therefore site investigation and management of any contamination will be necessary. Parts of the sewage treatment works will remain in use and this site will therefore be adjacent to an sewage treatment works, which will require due consideration. The likely access appears to be through other parts of the sewage treatment works (although much of this area has also been promoted for development), the suitability of this access, particularly for residential development, is subject to highway approval.
OSW064	Western element of the United Utilities Sewage Treatment Works, Oswestry	Oswestry	15.55	467	6.22	The site forms part of the United Utilities Sewage Treatment Works to the west of Oswestry. The site is located to the west of the site, adjacent to the residential development within the Oswestry development boundary.	Surrounding uses include the remainder of the sewage treatment works; residential development and agricultural land.	Not Suitable	The site is separated from the development boundary and residential development within it by the remainder of the sewage treatment works. Therefore open market residential development is contrary to policy. Furthermore due to this separation the site in isolation is not considered to have long term potential for open market residential development.	Not Suitable	The site is separated from the development boundary and forms of development other than the sewage treatment works itself by the remainder of the sewage treatment works. As such employment development is limited to small scale rural enterprise and diversification schemes. However, due to this separation the site in isolation is not considered to have long term potential for other forms of employment development.
OSW065	South eastern element of the United Utilities Sewage Treatment Works, Oswestry	Oswestry	7.73	232	3.09	The site forms part of the United Utilities Sewage Treatment Works to the west of Oswestry. The site is located to the south east of the site, outside the Oswestry development boundary but adjacent to residential development.	Surrounding uses include the remainder of the sewage treatment works; residential development and agricultural land.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site currently forms part of a sewage treatment works, therefore site investigation and management of any contamination will be necessary. Parts of the sewage treatment works will remain in use and this site will therefore be adjacent to an sewage treatment works, which will require due consideration. The suitability of this access is subject to highway approval. The site is also in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site currently forms part of a sewage treatment works, therefore site investigation and management of any contamination will be necessary. OSW068	Land west of Whittington House	Oswestry	0.51	15	0.20	The site is a small wedge-shaped piece of land between the Artillery Business Park and Whittington House. Fronted by the A495 this flat area of former parkland is used as open space and grazing. To the south western corner of the wedge-shape I a single residential dwelling known as "Greenfields". The site was previously in military use.	To the east of the site is the BT-owned facility at Whittington House and its associated development. To the west of the site is the Artillery Business Park. To the opposite side of the A495 is land currently used for agricultural purposes.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of but adjacent to the Oswestry development boundary. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance, the site is adjacent to a large employment site (Artillery Business Park), the relationship between this site and the employment site will require due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site falls outside of but adjacent to the Oswestry development boundary. As such suitable employment uses on the site are therefore limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present For instance the site is adjacent to a series of dwellings and the relationship between these dwellings and any use on this site will require due consideration.
PKH002	Land adj. North Drive & Tympath Lane, Park Hall	Park Hall	2.9	86	1.15	The site is formed of a single field to the northern edge of the Park Hall settlement. Facing North Drive to its western side the site is gently undulating and in agricultural use. The site is adjacent to the development boundary to its south western corner	The area to the immediate south of the site has been most recently used as a depot for the storage and distribution of pork products prior to which it was in agricultural use as a piggery. The site to the south now has planning permission for residential development (14/01856/OUT). There is existing residential development adjacent to the south western corner of the site. The remainder of the site is bound by agricultural land.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement's development boundary/built form. As such, open market residential development is therefore contrary to policy. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance there is provision for a 167KW overhead line towards the northern end of the site which would need to be taken account of in any scheme's design and layout.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement's development boundary/built form. As such, suitable employment uses are limited to small scale rural enterprise and diversification schemes. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance there is provision for a 167KW overhead line towards the northern end of the site which would need to be taken account of in any scheme's design and layout.
PKH008	Land at Inglis Road, Park Hall	Park Hall	0.2	7	0.09	This small square site is a plot of woodland adjacent to and opposite existing residential development. The site has a short frontage to Inglis Rd.	To the rear (SW) and side (SE) of the site is a continuation of the woodland of which the site forms a part. To the NW is existing residential development which is separated from the site by an access drive. To the opposite side of Inglis Rd which fronts the site to the NE is existing residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement's development boundary/built form. As such, open market residential development is therefore contrary to policy. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the site is densely wooded, this will require due consideration. The ability to provide an appropriate access into the site is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement's development boundary/built form. As such suitable employment uses are limited to small scale rural enterprise and diversification schemes. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the site is densely wooded, this will require due consideration. The ability to provide an appropriate access into the site is subject to highway approval.
PKH011	Land west of Park House, Park Hall	Park Hall	0.4	13	0.18	The site consists of two small agricultural fields located between residential properties fronting onto North Drive and Park House. Site boundaries to east and west are residential curtilages. The northern boundary is defined by a hedgerow field boundary. The southern boundary is defined by an access road.	Character to the north is predominantly agricultural. Character to the east is predominantly residential. Character to the south is a mix of woodland and residential. Character to the east includes agricultural, a dwellings (Park House) and a former piggeries (with planning permission for residential development).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement's development boundary/built form. As such, open market residential development is therefore contrary to policy. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance access is off a narrow lane, the ability to provide an appropriate access into the site is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement's development boundary/built form. As such suitable employment uses are limited to small scale rural enterprise and diversification schemes. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the ability to provide an appropriate access into the site is subject to highway approval.
PKH012	Land north of Park Crescent, Park Hall	Park Hall	0.7	21	0.28	A linear site consisting of an agricultural field/strip of woodland. The northern boundary is defined by the farm/employment complex to the north and its access road. The southern boundary is defined by the woodland strip on the site/residential curtilages. The eastern boundary is defined by a hedgerow field boundary. The western boundary is less obviously defined.	Character to the east is predominantly agricultural. Character to the south is a mix of residential and agricultural (allocated for residential development). Character to the west is predominantly residential. Character to the north is a mix of agricultural and a former piggeries (with planning permission for residential development).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement's development boundary/built form. As such, open market residential development is therefore contrary to policy. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance access is off a narrow lane, the ability to provide an appropriate access into the site is subject to highway approval. The site includes a mature strip of woodland, this will require due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement's development boundary/built form. As such suitable employment uses are limited to small scale rural enterprise and diversification schemes. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site includes a mature strip of woodland, this will require due consideration.

PKH013	Land north of the former Piggeries, Park Hall	Park Hall	3.7	112	1.49	The site consists of a large agricultural field. The eastern boundary is defined by the railway line. The northern and western boundaries are defined by agricultural field boundaries. The southern boundary is defined by a field boundary beyond which it is woodland/scrubland in part, further agricultural fields in part and an employment/farm complex.	Surrounding character is predominantly agricultural, with the exception of the former piggeries (with planning permission for residential development) to the south.	Not Suitable	The site is outside and separated from the settlement's development boundary, although it is adjacent to a current development site (the former piggeries). As such, open market residential development is therefore contrary to policy. Furthermore, the site does not currently appear to have a road frontage or obvious point of access and the layout of the development of the former Piggeries includes a landscape buffer/open space between it and this site. If an access were identified, its suitability would be subject to highway approval.	Not Suitable	The site is outside and separated from the settlement's development boundary, although it is adjacent to a current development site (the former piggeries). As such, suitable employment uses are limited to small scale rural enterprise and diversification schemes. However, the site does not currently appear to have a road frontage or obvious point of access and the layout of the development of the former Piggeries includes a landscape buffer/open space between it and this site. If an access were identified, its suitability would be subject to highway approval.
PKH016	Land north of Whittington Road, Park Hall	Park Hall	15.7	470	6.26	A large site consisting of numerous agricultural fields and a camp site. The site surrounds a gypsy and traveller site. The site lies to the north of Whittington Road, the element of the settlement of Park Hall fronting onto Whittington Road and the large area of open space associated with the Oswestry Boys and Girls Club - these areas form the sites southern boundary. The sites eastern boundary is defined by Drenwydd Road and the large area of open space associated with the Oswestry Boys and Girls Club. The sites western boundary is defined by Burma Road and an agricultural field boundary. The sites northern boundary is defined by a woodland and an agricultural field boundary.	Character to the south and east is a mix of open space, agricultural land and residential. Character to the west is a mix of agricultural and employment. Character to the north is a mix of agricultural, woodland and residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the settlements development boundary, however it is located adjacent to its built form. As such, open market residential development is therefore contrary to policy. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site is very large and its relationship to the built form of Park Hall and Oswestry will require due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the settlements development boundary, however it is located adjacent to its built form. As such, suitable employment uses are limited to small scale rural enterprise and diversification schemes. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
PKH023	Land north of Five Crosses roundabout, near Park Hall	Park Hall	3.8	114	1.52	The site consists of a linear agricultural field located to the west of the Oswestry Orthopaedic Hospital. Site boundaries are defined by roads to east and west and hedgerow field boundaries to north and south.	Surrounding uses are primarily agricultural.	Not Suitable	The site is located away from and outside the built form of Gobowen/Park Hall/Oswestry Orthopaedic Hospital. As such open market residential development is contrary to policy. Furthermore, a small portion of the northern element of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Due to the sites location separated from the built form of the settlement/hospital, the site is not considered to have long term potential for open market residential development.	Not Suitable	The site is located away from and outside the built form of Gobowen/Park Hall/Oswestry Orthopaedic Hospital. As such suitable employment development is limited to rural enterprise and diversification schemes. However, a small portion of the northern element of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Due to the sites location separated from the built form of the settlement/hospital, the site is not considered to have long term potential for other forms of employment development.
PKH024X	Land at Twmpath Lane, Twmpath	Park Hall	0.2	6	0.08			Not Suitable	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Not Suitable	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
PKH025	Land at Wern Lodge, Park Hall	Park Hall	1.4	43	0.58	The site consists of a small agricultural field located to the east of Wern Lodge, adjacent to the built form of the Oswestry Orthopaedic Hospital. Site boundaries are defined by the railway line to the east; the access to Wern Lodge to the west; and agricultural field boundaries to the north and south.	Character to north, south and west is primarily agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the settlements development boundary, however it is located adjacent to its built form/the built form of Oswestry Orthopaedic Hospital. As such, open market residential development is therefore contrary to policy. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site is in proximity of one or more listed buildings and a scheduled monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the settlements development boundary, however it is located adjacent to its built form/the built form of Oswestry Orthopaedic Hospital. As such, suitable employment development is limited to rural enterprise and diversification schemes. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site is in proximity of one or more listed buildings and a scheduled monument, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
PKH026	Land west of RHAJ Hospital, Park Hall	Park Hall	1.5	45	0.60	A triangular site consisting of car parking to south and south-east and the remainder is scrubland. The site is located between Twmpath Lane to the south, the railway line to the west and Oswestry Orthopaedic Hospital to the east.	To the east is the Oswestry Orthopaedic Hospital and associated environs. Character to the north and west is predominantly agricultural. Character to the south is a mix of agricultural, woodland and residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the settlements development boundary, however it is located adjacent to its built form/the built form of Oswestry Orthopaedic Hospital. As such, open market residential development is therefore contrary to policy. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site is in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. PKH029	Land at Hinsdale, Park Hall	Park Hall	2.9	86	1.15	The site consists of the majority of an agricultural field located to the south of the Oswestry Orthopaedic Hospital. Site boundaries are primarily agricultural field boundaries, with the exception of the railway line to the east and the northern boundary which runs through an agricultural field.	Character to south, east and west is predominantly agricultural. To the north is the Oswestry Orthopaedic Hospital and some residential dwellings.	Not Suitable	The site is separated from the settlements development boundary, however it is located adjacent to its built form/the built form of Oswestry Orthopaedic Hospital. As such, open market residential development is therefore contrary to policy. Furthermore, the site does not appear to have a road frontage or potential point of access.	Not Suitable	The site is separated from the settlements development boundary, however it is located adjacent to its built form/the built form of Oswestry Orthopaedic Hospital. As such, suitable employment development is limited to rural enterprise and diversification schemes. However, the site does not appear to have a road frontage or potential point of access.
PKH030	Land at Thornfield, Twmpath Lane, Park Hall	Park Hall	0.5	16	0.21	A linear site consists of two sections connected by a narrow strip. The northern section consists of an area of scrubland fronting onto Twmpath Lane, the connecting strip and southern element is heavily wooded. Site boundaries are defined by Twmpath Lane to the north, residential curtilages (north-east and north-west) and the extent of the woodland areas to south, south-east and south-west.	Character to south and east is predominantly agricultural, although there is also a row of dwellings to the east of the northern element of the site. To the north is the Oswestry Orthopaedic Hospital. To the west are residential dwellings, beyond which is agricultural land and woodland.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the settlements development boundary, however it is located adjacent to its built form/the built form of Oswestry Orthopaedic Hospital. As such, open market residential development is therefore contrary to policy. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the ability to provide an appropriate access into the site is subject to highway approval. The southern element of the site and the narrow link strip are heavily wooded, this will require due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the settlements development boundary, however it is located adjacent to its built form/the built form of Oswestry Orthopaedic Hospital. As such, suitable employment development is limited to rural enterprise and diversification schemes. For instance the ability to provide an appropriate access into the site is subject to highway approval. The southern element of the site and the narrow link strip are heavily wooded, this will require due consideration.
PKH031	Land south of the Orthopaedic Hospital, Park Hall	Park Hall	1.6	47	0.62	The site consists of an agricultural field located to the south of the Oswestry Orthopaedic Hospital.	Character to the south and east is predominantly agricultural. Character to the north and north-west is a mix of residential and uses associated with the Oswestry Orthopaedic Hospital. Character to the south-west is predominantly agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the settlements development boundary, however it is located adjacent to its built form/the built form of Oswestry Orthopaedic Hospital. As such, open market residential development is therefore contrary to policy. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the sites access is very narrow, the suitability of this or any other potential access is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the settlements development boundary, however it is located adjacent to its built form/the built form of Oswestry Orthopaedic Hospital. As such, suitable employment development is limited to rural enterprise and diversification schemes. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the sites access is very narrow, the suitability of this or any other potential access is subject to highway approval.
PKH032	Land at Hinsdale, Park Hall	Park Hall	0.8	23	0.31	The site consists of the northern element of an agricultural field located to the south of the Oswestry Orthopaedic Hospital. The sites northern boundary is defined by Twmpath Lane. The sites eastern boundary is defined by the railway line. The sites western boundary is defined by property curtilages. The sites southern boundary is relatively undefined, cutting through an agricultural field.	Character to south and east is predominantly agricultural. To the north and west is the Oswestry Orthopaedic Hospital and some residential dwellings.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the settlements development boundary, however it is located adjacent to its built form/the built form of Oswestry Orthopaedic Hospital. As such, open market residential development is therefore contrary to policy. However, Park Hall and the Oswestry Orthopaedic Hospital have been identified as a potential garden suburb associated with the settlement of Oswestry, as such the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints identified. For instance the suitability of the potential access is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is separated from the settlements development boundary, however it is located adjacent to its built form/the built form of Oswestry Orthopaedic Hospital. For instance the suitability of the potential access is subject to highway approval.
P10	Land north of Priorslee Road and south of Haughton Road, west of Shifnal	Shifnal	95.21	2856	38.08	A very large and irregularly shaped site consisting of a significant number of agricultural fields; a leisure park focused on a number of large ponds used for fishing; and Wesley Brook and its environs. The site is located to the west of Shifnal.	Character to the north, south and west is predominantly agricultural, although there is a motel to the west of the site. Character to the east is predominantly residential. The site wraps around Haughton Hall which is a hotel and event/conference centre.	Not Suitable	The sites is adjacent to but outside the Shifnal development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, Wesley Brook runs through the site and land either side of it is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is very large and its relationship to be existing settlement will require due consideration. The site also protrudes into the countryside and forms much of the gap between Shifnal and Telford. The ability to provide an appropriate access to, into and through the site is subject to highway approval. The site contains a number of ponds, which will require due consideration. The site also contains and is in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. A small portion of the site is located in a conservation area and parts of the site are also in proximity of this conservation area and a number of listed buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.	Not Suitable	The sites is adjacent to but outside the Shifnal development boundary. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore, Wesley Brook runs through the site and land either side of it is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. PKH029	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not suitable for development as it does not appear to have a road frontage or potential point of access.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is not suitable for development as it does not appear to have a road frontage or potential point of access.
PKH030	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary assessments). However, availability is unknown. Furthermore, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Furthermore, Wesley Brook runs through the site and land either side of it is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is very large and its relationship to the existing settlement will require due consideration. The site also protrudes into the countryside and forms much of the gap between Shifnal and Telford. The ability to provide an appropriate access to, into and through the site is subject to highway approval. The site contains a number of ponds, which will require due consideration.	Rejected	Availability, achievability and viability of the site are unknown. Furthermore, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such employment development on the site would be contrary to local and national policy. The site is very large and its relationship to the existing settlement will require due consideration. The site also protrudes into the countryside and forms much of the gap between Shifnal and Telford. The ability to provide an appropriate access to, into and through the site is subject to highway approval. The site contains a number of ponds, which will require due consideration.

Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
P15a	Land at Lamledge Lane, Shifnal	Shifnal	18.00	540	7.20	The site consists of a series of agricultural fields. It is located within the Green Belt between land safeguarded for future development to the west; Lamledge Lane to the east and south; and the railway line to the north.	Character to the east and west is predominantly agricultural, although land to the west has been safeguarded for future development. Character to the north is a mix of commercial and education, beyond which it is agricultural. Character to the south is a mix of agricultural and leisure, consisting of agricultural fields and two large fishing ponds.	Not Suitable	The site is outside and separated from the Shifnal development boundary by land safeguarded for future development. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, the ability to provide an appropriate access is subject to highway approval. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity to listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is outside and separated from the Shifnal development boundary by land safeguarded for future development. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore, the ability to provide an appropriate access is subject to highway approval. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity to listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
P15b	Land between Hinington Road, Lamledge Lane and the A464, Shifnal	Shifnal	18.80	564	7.52	An irregularly shaped site consisting of a series of agricultural fields. It is located to the east of Shifnal within the Green Belt.	Surrounding character is predominantly agricultural. However to the south is a large rural residential dwelling and associated buildings on a large plot, a reservoir and several small ponds. To the north are two large fishing ponds. The site is also in proximity of other dwellings.	Not Suitable	The site is outside and separated from the Shifnal development boundary by a mixture of land safeguarded for future development and land within the Green Belt. The site is also itself located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, the ability to provide an appropriate access is subject to highway approval. The site contains a reservoir and two large ponds, this will require due consideration. The site is in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The site is outside and separated from the Shifnal development boundary by a mixture of land safeguarded for future development and land within the Green Belt. The site is also itself located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore, the ability to provide an appropriate access is subject to highway approval. The site contains a reservoir and two large ponds, this will require due consideration. The site is in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
P16	Land at Lodgehill Farm, Shifnal	Shifnal	25.17	755	10.07	A large irregularly shaped site consisting of a series of agricultural fields separated from the built form of the settlement by an adjacent agricultural field to the north of the site. The western boundary of the site is defined by Wesley Brook.	Surrounding character is predominantly agricultural. However houses along Park Lane are located to the north east of the site.	Not Suitable	The site is outside and separated from the Shifnal development boundary by land within the Green Belt. The site is also itself located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, the ability to provide an appropriate access is subject to highway approval. The site is in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The site is outside and separated from the Shifnal development boundary by land within the Green Belt. The site is also itself located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore, the ability to provide an appropriate access is subject to highway approval. The site is in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
P17a	Land south of Priorslee Road and north of the railway line, Shifnal	Shifnal	34.00	1020	13.60	A linear site consisting of a large number of agricultural fields, which projects out into the countryside from Shifnal.	Character to the north, west and south is predominantly agricultural. Character to the east and south east is predominantly residential.	Not Suitable	The sites are adjacent to but outside the Shifnal development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. The site also contains an identified outdoor sports facility and allotment in the eastern portion of the site, therefore this area of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore the site is very large and its relationship to be existing settlement will require due consideration. The site also protrudes into the countryside and forms part of the gap between Shifnal and Telford. The ability to provide an appropriate access to, into and through the site is subject to highway approval. The site is in proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The sites are adjacent to but outside the Shifnal development boundary. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. The site also contains an identified outdoor sports facility and allotment in the eastern portion of the site, therefore this area of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore the site is very large and its relationship to be existing settlement will require due consideration. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
P17b	Land at Custard Castle, Shifnal	Shifnal	30.14	904	12.06	The site consists of three agricultural fields located to the north of Shaw Lane and south of the railway line.	Surrounding character is predominantly agricultural. However there are several rural dwellings/farmhouses on large plots in proximity of the site, including Custard Castle which is surrounded by the site.	Not Suitable	The site is outside and separated from the Shifnal development boundary by land within the Green Belt. The site is also itself located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore, the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. SHF004	Land to the rear of Jaspers, Shrewsbury Road	Shifnal	0.11	5	0.04	Car park to the rear of a Jaspers restaurant/public house.	The site is surrounded by residential and retail / food and drink uses together with some office uses.	Currently Suitable - Subject to Further Detailed Assessment	The site is located on the edge of the town centre of Shifnal, within its development boundary. As such it is a suitable location for open market residential development. However, this excludes a small portion of the site, along its eastern boundary which is located within flood zones 2 and/or 3. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. Additionally the site is adjacent to a TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The ability to provide an appropriate access is subject to highway approval.	Currently Suitable - Subject to Further Detailed Assessment	The site is located on the edge of the town centre of Shifnal, within its development boundary. SHF005	Shifnal W.M. Club and land at 77 Aston Road	Shifnal	0.08	5	0.03	The site comprises a series of red brick buildings and hardstanding/parking alongside the road. The building is in use as a chartered accountants, but was previously a working men's club.	The surrounding area is predominantly residential, however there is a nearby employment estate and public house.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shifnal development boundary, as such it is an appropriate location for open market residential development. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site contains a Grade 2 Listed Building, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. Furthermore the site is located within proximity of a conservation area and one or more other listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shifnal development boundary and is in employment use, as such it is an appropriate location for employment development. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site contains a Grade 2 Listed Building, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
SHF007	Stanton Hill Farm	Shifnal	0.79	24	0.32	A range of farm buildings which are in variable states of dereliction. The site is located within the Green Belt and is divorced from the settlement of Shifnal and any development would not therefore be classified as rural development.	The site is located within the open countryside. Surrounding land uses are primarily agricultural although there is a single dwelling on a nearby plot.	Not Suitable	The site is unsuitable for open market residential development as it is located within the Green Belt and is divorced from the settlement of Shifnal. Furthermore, the only means of access to this site is down an access track serving the barns, this is relatively narrow and its ability to service (vehicular and pedestrian access) an alternative development would be dependent on approval by the Highways Team. Additionally, Stanton Road which the access track connects to does not have a pedestrian pavement.	Not Suitable	The site is unsuitable for employment development as it is located within the Green Belt and is divorced from the settlement of Shifnal. Furthermore, the only means of access to this site is down an access track serving the barns, this is relatively narrow and its ability to service (vehicular and pedestrian access) an alternative development would be dependent on approval by the Highways Team. Additionally, Stanton Road which the access track connects to does not have a pedestrian pavement.
SHF009	Shifnal War Memorial Club, Shifnal	Shifnal	0.29	9	0.12	The site consists of the Shifnal War Memorial Club and associated car parking.	Uses surrounding the site are primarily residential and open countryside.	Currently Suitable - Subject to Further Detailed Assessment	This site is considered suitable in principle for residential development as it is located within the development boundary and is in a primarily residential location with good access to services and facilities. However suitability is subject to management of any physical, heritage and environmental constraints present. For instance the site is within proximity of the Shifnal conservation area and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There is a wooded belt to the west of the site (part on tie site) which is subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	This site is considered suitable in principle for employment development as it is located within the development boundary with good access to services and facilities. However suitability is subject to management of any physical, heritage and environmental constraints present. For instance the site is in a primarily residential location and any proposed development would need to complement this setting. The site is also within proximity of the Shifnal conservation area and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. here is a wooded belt to the west of the site (part on tie site) which is subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
SHF011a	Land south east of Shifnal	Shifnal	42.36	1271	16.94	Large site primarily in agricultural use to the east of Shifnal.	Agricultural and residential.	Not Suitable	The sites are adjacent to but outside the Shifnal development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore the ability to provide an appropriate access to the site is subject to highway approval. The site is also within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site also contains a listed building, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. SHF004	Not Currently Available - Likely to become so	This site has previously been the subject of Planning Applications (most recently refused in 2005) for the demolition of existing buildings (beyond the identified site area) and erection of 28 dwellings. Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered likely to become available, viable and achievable. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. The site is however considered suitable for residential development (excluding the small portion of the site located within flood zones 2 and/or 3), subject to assessment and management of the physical; environmental; or heritage constraints. Such as the ability to access the site and its location within a conservation area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. The site is however considered suitable for employment development (excluding the small portion of the site located within flood zones 2 and/or 3), subject to assessment and management of the physical; environmental; or heritage constraints. Such as the ability to access the site and its location within a conservation area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on confirmation of its availability, achievability and viability; appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
SHF005	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. SHF007	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Furthermore, the site is separated from the built form of the settlement. The only means of access to this site is down an access track serving the barns on the site, this is relatively narrow and its ability to service (vehicular and pedestrian access) an alternative development would be dependent on approval by the Highways Team.	Rejected	The sites availability, achievability and viability are unknown. However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such employment development on the site would be contrary to local and national policy. SHF011c	Land at Upton Lodge, Shifnal	Shifnal	0.79	24	0.32	Agricultural land	Agricultural and residential.	Not Suitable	The sites is separated from the Shifnal development boundary by other land. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore the ability to provide an appropriate access to the site is subject to highway approval.	Not Suitable	The sites is separated from the Shifnal development boundary by other land. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore the ability to provide an appropriate access to the site is subject to highway approval.
SHF013	Land north of Meadow Drive, Shifnal	Shifnal	3.87	116	1.55	A small rectangular agricultural field located between the northern edge of Shifnal and the M54. The site has been safeguarded for future development in Shifnal.	The land character to the south is predominantly residential. Land to the north is characterised by the M54 and its cutting, beyond this the land is agricultural in character. Land to the east is predominantly agricultural. Land to the west is currently being developed for residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within land safeguarded for future development, adjacent to but beyond the settlement boundary. As such open market residential development in this location would be contrary to policy. However the site may have long term potential subject to appropriate changes to relevant policies and boundaries and the identification of a suitable vehicular and pedestrian access - this could be constrained by the wooded belt (subject to TPO protection) running north to south in the western portion of the site). The presence of TPO's on and in proximity of the site would also require development to be subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within land safeguarded for future development, adjacent to but beyond the settlement boundary. As such employment development in this location would be contrary to policy. However the site may have long term potential subject to changes to relevant policies and boundaries and the identification of a suitable vehicular and pedestrian access - this could be constrained by the wooded belt (subject to TPO protection) running north to south in the western portion of the site). The presence of TPO's on and in proximity of the site would also require development to be subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
SHF015	Land at Beech House, Wolverhampton Road, Shifnal	Shifnal	1.39	42	0.56	The site consists of a large dwelling, associated outbuildings and its extensive curtilage.	To the north, south and east the character is predominantly agricultural. Land to the west has been granted consent (and development has started) for residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within safeguarded land adjacent to but beyond the settlement boundary. As such residential development in this location would be contrary to policy. However the site may have long term potential subject to appropriate changes to relevant policies and boundaries and management of any physical, heritage and environmental constraints. For instance, the site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The trees on the site are subject to TPO protection, as are the other trees to the northwest and southwest of the site, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within safeguarded land adjacent to but beyond the settlement boundary. As such employment development in this location would be contrary to policy. However the site may have long term potential for employment subject to appropriate changes to relevant policies and boundaries and management of any physical, heritage and environmental constraints. For instance, employment uses proposed would need to complement the sites, its setting and surrounding uses. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
SHF016	St Peter's Youth Club, Bridgnorth Road, Shifnal	Shifnal	0.41	12	0.17	The site consists of St Peter's Youth Club and its curtilage.	Character to the north, east and south is predominantly residential. Character to the west is agricultural.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary and a predominantly residential area therefore the principle of open market residential uses on the site is accepted. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is in proximity of a conservation area and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary therefore the principle of employment uses on the site is accepted. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance as the site is in a predominantly residential area, the proposed employment use on the site will need to complement this setting and is likely limited to office based employment. The site is in proximity of a conservation area and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.

Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is not currently suitable for development as it is located in land safeguarded for future development and outside the settlement development boundary, consequently employment development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
SHF016	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been submitted through the 'call for sites'. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for residential development. Suitability of the site for residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. SHF017	Lodge Hill, South West of Shifnal	Shifnal	35.73	1072	14.29	Large greenfield site to the south west of Shifnal. The site consists of a series of agricultural fields that lie adjacent to the south western development boundary of Shifnal. The site is divided into three components by the A4169 and Wesley Brook (and associated environs). The site is located in the Green Belt.	To the north west; south west and south east are agricultural fields. To the north east are residential dwellings within the settlement of Shifnal.	Not Suitable	The sites are adjacent to but outside the Shifnal development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore the site contains an area of flood risk along the route of Wesley Brook (and associated environs), therefore this component of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site also contains and is in proximity of a number of TPOs, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The ability to provide an appropriate access and transport links (vehicular, cyclist and pedestrian) to, into and through the site is subject to highway approval. The site contains grade 2 agricultural land.	Not Suitable	The sites are adjacent to but outside the Shifnal development boundary. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore the site contains an area of flood risk along the route of Wesley Brook (and associated environs), therefore this component of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site also contains and is in proximity of a number of TPOs, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site contains grade 2 agricultural land.
SHF018a	Land to the South of Stanton Road, East of Shifnal	Shifnal	4.47	134	1.79	An agricultural field to the south of Stanton Road. The site lies within the Green Belt to the east of land subject to Planning Permission for mixed use development (predominantly residential) on the east of Shifnal.	To the north of the site is Stanton Road, beyond which are agricultural fields. To the east of the site are agricultural fields. To the south of the site is a wooded area beyond which is an employment and educational area. To the west of the site is an area being developed for a mix of uses (predominantly residential).	Not Suitable	The sites are adjacent to but outside the Shifnal development boundary. The site is also located within the Green Belt, as such open market residential development on the site would be contrary to policy. Furthermore the ability to provide an appropriate access to the site is subject to highway approval. The site contains grade 2 agricultural land. The site is also within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The sites are adjacent to but outside the Shifnal development boundary. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHF018b	Land to the East of Shifnal Industrial Estate	Shifnal	14.47	434	5.79	The site comprises two agricultural fields to the east of Shifnal Industrial Estate; south of Stanton Road and north of the railway line.	Surrounding land uses are predominantly agricultural, excluding the industrial estate and education facility to the west.	Not Suitable	The sites are adjacent to but outside the Shifnal development boundary. The site is also located within the Green Belt, as such residential development on the site would be contrary to policy. Furthermore the ability to provide an appropriate access to the site is subject to highway approval. The site contains grade 2 agricultural land.	Not Suitable	The sites are adjacent to but outside the Shifnal development boundary. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore the ability to provide an appropriate access to the site is subject to highway approval. The site contains grade 2 agricultural land.
SHF018c	Land to the North East of Shifnal	Shifnal	79.50	2385	31.80	Large site to the north east of Shifnal. The site consists of a number of fields in agricultural use and a number of wooded areas. The site is defined by Coppice Green Lane to the west; the M54 to the north; Upton Lane to the east; and Stanton Road to the south.	Land to the east, south and north (beyond the M54) is agricultural. Land to the west is predominantly open space, however there is an area of land to the north west which is currently being built out as residential development.	Not Suitable	The sites are separated from the Shifnal development boundary by areas of public open space and a development site. The site is also located within the Green Belt, as such residential development on the site would be contrary to policy. Furthermore the ability to provide appropriate vehicular, cyclist and pedestrian access to, into and through the site would need to be informed by a comprehensive transport strategy and would be subject to approval by the highway team. The majority of the site is grade 2 agricultural land. The site contains and is within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The sites are separated from the Shifnal development boundary by areas of public open space and a development site. The site is also located within the Green Belt, as such employment development on the site would be contrary to policy. Furthermore the ability to provide appropriate vehicular, cyclist and pedestrian access to, into and through the site would need to be informed by a comprehensive transport strategy and would be subject to approval by the highway team. The majority of the site is grade 2 agricultural land. The site contains and is within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHF019	Land south of the A464, Shifnal	Shifnal	9.90	297	3.96	A large agricultural field to the south-east of Shifnal. The site is located to the south of the A464, but is detached from the existing built form of Shifnal.	Surrounding character is predominantly agricultural. There is a single dwelling to the north west of the site.	Not Suitable	The site is separated from the built form of Shifnal, by agricultural fields safeguarded for future development (some of which now have Planning Permission for residential development). The site is also located within the Green Belt. Therefore open market residential development is contrary to policy. Furthermore, the ability to provide an appropriate access would be subject to highway approval. The site is also in proximity to a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is in proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. SHF021	West of Lamledge Lane and Shifnal College and North of Shifnal Industrial Estate	Shifnal	0.18	6	0.07	Part of an agricultural field to the west and north of Lamledge Lane and Shifnal Industrial Estate. The western portion of the site is part of an existing employment allocation. Land to the west and north has Planning Permission for a mixed residential and care home scheme.	Land to the west and north is predominantly agricultural however much of it is a current employment allocation with Planning Permission for a mixed residential and care home scheme. Lane to the south and east predominantly consists of employment and education uses.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shifnal development boundary. The eastern portion of the site is unallocated. The western portion of the site is allocated for employment uses and the preference would be for employment uses upon it, however it is recognised that the wider employment allocation has been granted Planning Permission for a mixed residential and care home scheme, therefore open market residential uses on this component of the site is also likely to be appropriate. The ability to provide an appropriate access is subject to highway approval.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shifnal development boundary. The eastern portion of the site is unallocated. The western portion of the site is allocated for employment uses, therefore employment uses on the site are considered appropriate. The ability to provide an appropriate access is subject to highway approval.
SHF022	Land to the North-East of Wolverhampton Road, Shifnal	Shifnal	1.74	52	0.70	Agricultural field to the south east of Shifnal.	Surrounding character is predominantly agricultural to the south west, south east and north east of the site. Character to the north and north west is residential as the adjacent land has been granted consent for residential development and is currently being built out.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site consists of land safeguarded for future development and is located adjacent to a development site within/on the edge of Shifnal's development boundary. Therefore open market residential development on this site is currently contrary to policy. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. Such as the ability to provide an appropriate access to the site. For instance the ability to provide an appropriate access is subject to highway approval. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site consists of land safeguarded for future development and is located adjacent to a development site within/on the edge of Shifnal's development boundary. SHF021	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viable	The site has been promoted for employment uses. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for residential development. Suitability of the site for residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. Suitability of the site for residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment.
SHF022	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purposes of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Furthermore, integration of the site into the existing built form will require due consideration. The ability to provide an appropriate access into and through the site is subject to highway approval.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However the site is not currently suitable for development as it is located in land safeguarded for future development and outside the settlement development boundary, consequently employment development is contrary to policy. However, the site may have long term potential, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
SHF024	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken. Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
SHF025	Wesley Brook, Patons land	Shifnal	0.16	5	0.06	Small vacant greenfield site - formerly wooded now scrubland, to the rear of the medical centre and a block of flats. Access to the site would need to be through the car park access/cark park associated with the block of flats.	To the south of the site is a medical centre and heavily treed area. To the north of the site are residential gardens. To the east of the site is a block of apartments and associated car park. To the west of the site are residential dwellings.	Not Suitable	The site is located within the Shifnal development boundary. However it is almost entirely located within flood zones 2 and/or 3, therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, the ability to access the site is unclear - access could be provided through the adjacent car park/car park access, however whether this route is available (subject to agreement with the landowner) and suitable (subject to highway approval) is unclear. The site is also located within proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located within the Shifnal development boundary. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHF026	Land adjacent to Upton Lodge, east of Park Lane and west of Upton Lane	Shifnal	2.58	77	1.03	Agricultural field located adjacent to Upton Lodge, between Park Lane and Upton Lane.	Surrounding character is predominantly agricultural apart from the small group of dwellings around Upton Lodge.	Not Suitable	The site is located within the open countryside and the Green Belt. Therefore open market residential development is contrary to policy. Furthermore, the site is separated from the built form of Shifnal by agricultural fields in the Green Belt. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located within the open countryside and the Green Belt. Therefore employment development is contrary to policy. Furthermore, the site is separated from the built form of Shifnal by agricultural fields in the Green Belt. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHF027	Garage off Bradford Street, Shifnal	Shifnal	0.23	7	0.09	Garage and car showroom within Shifnal town centre.	The surrounding character is a mix of retail and residential.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shifnal development boundary and its frontage is within the town centre. As a result there would be an expectation that ground floor uses may be more appropriate for retail and town centre uses. Open market residential uses on upper floors would be supported. The site does have potential for open market residential on the ground floor subject to demonstration of compliance with current policy (that residential uses on the ground floor would support the regeneration of the town centre) or long term potential subject to appropriate policy changes. Suitability is also subject to and management of any physical, heritage and environmental constraints. For instance as a former garage site investigation and remediation or any contamination would be required. The site is within proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shifnal development boundary and its town centre and is currently in employment use. The site is therefore suitable for employment development, where this use is compatible with the sites town centre location, subject to appropriate management of any physical, heritage and environmental constraints. For instance as a former garage site investigation and remediation or any contamination would be required. The site is within proximity of a conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
SHF028	27 Shrewsbury Road, adjacent to St Mary's Church, Shifnal	Shifnal	0.18	5	0.07	The site consists of an attractive sandstone building fronting onto Shrewsbury Road, a series of other buildings to the rear and an outdoor grassed area.	Surrounding uses include St Mary's Church, and residential dwellings.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shifnal development boundary and near the town centre, therefore the site is suitable for open market residential development subject to appropriate management of any physical, heritage and environmental constraints. For instance the ability to access the site is subject to highway approval. The site is located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The buildings fronting onto Shrewsbury Road may have heritage value.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shifnal development boundary, in employment use and near the town centre, therefore the site is suitable for alternative employment development subject to appropriate management of any physical, heritage and environmental constraints. For instance the ability to access the site is subject to highway approval. The site is located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The buildings fronting onto Shrewsbury Road may have heritage value.

SHF025	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development as it is almost entirely located within flood zones 2 and/or 3, therefore the site would only be considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, the ability to access the site is unclear - access could be provided through the adjacent car park/car park access, however whether this route is available (subject to agreement with the landowner) and suitable (subject to highway approval) is unclear.	Rejected	Availability, achievability and viability of the site are unknown. Furthermore the site is not considered suitable for employment development as it is almost entirely located within flood zones 2 and/or 3, therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, the ability to access the site is unclear - access could be provided through the adjacent car park/car park access, however whether this route is available (subject to agreement with the landowner) and suitable (subject to highway approval) is unclear.
SHF026	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. The site is however considered suitable for development subject to appropriate assessment and management of any impact on the physical, environmental; or heritage constraints to the site. Specifically the site is located within a conservation area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on confirmation of the sites availability, achievability and viability; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
SHF029	Land north of the Uplands, Shifnal	Shifnal	2.45	74	0.98	Area of scrubland to the south east of Shifnal. The site has been safeguarded for future development.	Character to the north is residential (adjacent site is currently under development for residential dwellings). Character to the south, east and west is predominantly agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within land safeguarded for future development adjacent to but beyond the settlement boundary. As such open market residential development in this location would be contrary to policy. However the site may have long term potential subject to appropriate changes to relevant policies and boundaries and management of any physical, heritage and environmental constraints. For instance, the ability to provide an appropriate highway access into the site is subject to approval. The site is within proximity of a conservation area and a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The trees on the site are subject to TPO protection, as are the other trees to the north, west and north east of the site, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within safeguarded land adjacent to but beyond the settlement boundary. As such employment development in this location would be contrary to policy. However the site may have long term potential subject to appropriate changes to relevant policies and boundaries and management of any physical, heritage and environmental constraints. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The trees on the site are subject to TPO protection, as are the other trees to the north, west and north east of the site, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
SHF032	land off Coppice Green, Shifnal	Shifnal	2.84	85	1.14	The site consists of a linear agricultural field located to the east of Shifnal.	Character to the west is predominantly outdoor sports facilities beyond which is Idsall School. Character to the east is predominantly agricultural. Character to the north is a mix of agricultural and residential. Character to the south is primarily agricultural, although there are also some rural dwellings.	Not Suitable	The site is located within the open countryside and the Green Belt. Therefore residential development is contrary to policy. The ability to provide an appropriate vehicular access is subject to highway approval. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located within the open countryside and the Green Belt. Therefore employment development is contrary to policy. The ability to provide an appropriate vehicular access is subject to highway approval. SHR001X	Land off Underdale Road	Shrewsbury	0.17	N/A	N/A						
SHR002	The Hollies, Sutton Road, Shrewsbury	Shrewsbury	0.42	13	0.17	A large Victorian house, set within gardens and grounds. This property has previously been used as offices and a residential home for the elderly. There is also on site car parking.	The surrounding character is primarily residential, although the adjacent building is a doctors surgery.	Currently Suitable - Subject to Further Detailed Assessment	As a brownfield site within the settlement boundary, it is a suitable location in principle for open market residential development. Suitability is subject to appropriate management of any physical, heritage and environmental constraints. For instance the existing building is attractive and of historic interest and as such should be retained. Furthermore the site is located within Shrewsbury Conservation Area. Therefore development of this site is subject to an assessment of impact on the specified asset(s). Where this shows that substantial harm to or a total loss of significance of the designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also located within proximity of one or more listed buildings and scheduled monuments. Consequently development is subject to an assessment of impact on the significance of the setting of this heritage asset(s). The site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site contains numerous trees subject to TPO's there are also numerous trees subject to TPO's in proximity of the site. Therefore development is subject to an assessment of impact on the protected tree(s) on/in proximity of the site in order to demonstrate how they can be safeguarded. The site is considered suitable for development in relation to this matter, subject to these safeguarding measures being deemed acceptable. As a result the suitability of the site is dependent on the outcome of necessary supporting assessments. SHF029	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been promoted for employment development. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered to be not currently available - likely to become so; achievable and viable (subject to any further necessary viability assessments). However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). The site is also considered suitable for development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically the site contains an attractive existing building and is located within the Shrewsbury Conservation Area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the presence of TPO's on the site; and the sites proximity to one or more listed buildings and scheduled monuments. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. SHR003	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented for residential development however the site does include existing employment uses (B1).	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial and commercial history of the County. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Other employment areas exist within smaller settlements and in some rural locations and these will support additional demand and provision. Outside of these areas, there is a traditional dependence on agriculture and related sectors, therefore the formation of new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered available, achievable and viable (subject to any further necessary viability assessment). The site is considered suitable for development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically the site is located within proximity of a Ramsar site, conservation area and scheduled monument. The ability to provide an appropriate access for an alternative use is subject to highway comments. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is in existing employment use, however its availability for an alternative employment development is unknown. Achievability and viability of use of the site for an alternative employment use is also unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is considered suitable for appropriate employment development (likely office based employment reflecting surrounding land uses and road links) subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically the site is located within proximity of a Ramsar site; conservation area; and scheduled monument. The ability to provide an appropriate access to the site is also subject to highway comments. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

SHR004	Site at New Park Road/ St Micheals Street, Shrewsbury	Shrewsbury	0.21	6	0.08	Site comprises a mature brick built warehouse type building, converted to offices and a parking area.	The site is in close proximity to a number of existing dwellings to its west. There are more dwellings, employment uses and retail uses surrounding the site.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within the Shrewsbury development boundary and within a mixed use area. However, much of the site is identified as a protected employment area. As such residential development is contrary to policy. However, the site may have long term potential for residential development subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site contains an attractive existing building which should be retained. It is also located within a conservation area. Therefore development of this site is subject to an assessment of impact on the specified asset(s). Where this shows that substantial harm to or a total loss of significance of the designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also located within proximity of one or more listed buildings. Therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset(s). The site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shrewsbury development boundary and within a mixed use area and much of the site is protected for employment uses. As such it is likely to be suitable for employment development. However, the site contains an attractive existing building which should be retained. It is also located within a conservation area. Therefore development of this site is subject to an assessment of impact on the specified asset(s). Where this shows that substantial harm to or a total loss of significance of the designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR005	Land at Silkmoor, Shrewsbury	Shrewsbury	0.94	28	0.38	A diverse area containing a range of occupied buildings and car parking, located in the centre of Shrewsbury in Frankwell, near the Welsh Bridge.	The site is located next to a recreation ground, retail units and residential developments.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shrewsbury development boundary and in proximity to the town centre. However, approximately half of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site outside of flood zones 2 and/or 3 does still have development potential, subject to suitable assessment and management of any other physical, heritage and environmental constraints present. For instance, approximately 2/3 of the site is located within an AQMA, this will require due consideration. The site is also located within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site contains a number of Grade 2 listed buildings; is located within a conservation area; and is in proximity of a number of other listed buildings (Grade 2 and 2*), a registered park and garden, and a scheduled monument. Therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shrewsbury development boundary and in proximity to the town centre. SHR006	Builders Yard, Betton Street, Shrewsbury	Shrewsbury	1.05	31	0.42	Former Travis Perkins Builders yard now Network rail maintenance depot. Rail storage depot and maintenance operation site accessed at junction of Betton St, Belle Vue road and Old Coleham. Site comprises number of brick built maintenance buildings and office building together with 2 storey portacabin office building. Site has been in rail use or builders yard since 19th C. Site boundaries clearly defined by Betton St to W and rail lines to SE; boundary with adjoining site SHR150 to E not clearly defined. Access onto junction of Betton St/Belle Vue road and Old Coleham shared with SHR150. Some self seeded shrubs/trees etc at S end of site.	Surrounding uses are a mix of residential and commercial.	Currently Suitable - Subject to Further Detailed Assessment	As a brownfield site within the development boundary, the site is considered suitable in principle for open market residential development. However, suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance as a brownfield site, it may be subject to contamination therefore suitable management and mitigation will be necessary. The ability to provide an appropriate and safe access into the site is subject to highway approval. The design and layout should mitigate any impact on/from the adjacent Network Rail site and railway line. The site is located within 250m of a Wildlife Site - River Severn, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of trees subject to TPO's therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. The site is within proximity of Belle Vue Conservation Area, Shrewsbury Abbey Scheduled Monument and numerous listed buildings, consequently development is subject to an assessment of impact on the significance of the setting of this heritage asset(s). The site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Currently Suitable - Subject to Further Detailed Assessment	As a brownfield site within the development boundary, the site is considered suitable in principle for employment development - indeed it is already in employment use. However, suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance as a brownfield site, it may be subject to contamination therefore suitable management and mitigation will be necessary. The ability to provide an appropriate and safe access into the site is subject to highway approval. The design and layout should mitigate any impact on/from the adjacent Network Rail site and railway line. The site is located within 250m of a Wildlife Site - River Severn, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of trees subject to TPO's therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. The site is within proximity of Belle Vue Conservation Area, Shrewsbury Abbey Scheduled Monument and numerous listed buildings, consequently development is subject to an assessment of impact on the significance of the setting of this heritage asset(s). The site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR007	William Farr House, Royal Shrewsbury Hospital, Shrewsbury	Shrewsbury	2.34	70	0.94	Currently occupied by Physio and other units of RSH with associated car-parking. Single/two storey buildings on site. Road frontage and vehicle access onto Mytton Oak Rd. Boundaries clearly defined with adjoining residential development to W, S, and E along Falcon's Way, Copperfield Drive and Churchill Road. Some trees and hedgerows on SE boundary of site. Site is predominantly flat and well related and linked into surrounding residential development.	Residential estate development.	Currently Suitable - Subject to Further Detailed Assessment	As a brownfield site within the development boundary, the site is considered suitable in principle for open market residential development. However, suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance any necessary remediation as a brownfield site. The site is within proximity of Listed Buildings Grade II: Mytton Villa, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded.	Currently Suitable - Subject to Further Detailed Assessment	As a brownfield site within the development boundary, the site is considered suitable in principle for employment development. However, suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance any necessary remediation as a brownfield site. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded.
SHR008	Garages, Off Belvidere Lane, Shrewsbury	Shrewsbury	0.19	6	0.07	Small brownfield site in residential area of E Shrewsbury (Belvidere) comprising 12 lock-up garages, parking and landscaping adjacent Shrewsbury-Telford rail line and Belvidere lane. Wand E boundaries set by adjoining residential properties on Belvidere Rd and Belvidere Lane; N and S boundaries set by Belvidere Lane and railway. Site has road frontage and access to Belvidere lane, alternative access also available onto Belvidere Rd. Site well related to existing established residential estate. Some established trees on site on road frontage and adjoining railway.	Medium to high density ex-local authority residential estate development.	Currently Suitable - Subject to Further Detailed Assessment	As a brownfield site within the development boundary, the site is considered suitable in principle for open market residential development. However, suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance any necessary remediation as a brownfield site. The sites location and proximity to existing dwellings means a sympathetic design is necessary. The site is located within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	As a brownfield site within the development boundary, the site is considered suitable in principle for employment development - however the site size and proximity to residential dwellings means that only office based employment is likely to be considered appropriate. Suitability is also subject to appropriate management of any physical, heritage and environmental constraints present. For instance any necessary remediation as a brownfield site. The site is also located within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

SHR011	Land at the Elms, Belvidere, Shrewsbury	Shrewsbury	0.91	27	0.36	The site comprises a driveway, grounds of a Grade 2 listed building 'The Elms' including portacabin Scout Hut in grounds and lock-up garages but not 'The Elms' itself or sheltered housing at entrance. 'The Elms' House is NHS rehab and recovery service. Site has road access to Belvidere Ave but no road frontage as such; pedestrian access also via Belvidere Ave to existing network. Site boundaries clearly defined by adjacent residential properties and St Giles primary school playing fields. Many established mature trees including some TPO's on site and forming boundaries to S and N .	Residential estate development and school playing fields to E.	Currently Suitable - Subject to Further Detailed Assessment	As a part brownfield and part greenfield site within the development boundary, the site is considered suitable in principle for open market residential development. However, suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the need to provide an alternative location for the Scout Group. The ability to provide an appropriate access into the site is subject to highway approval. The site is within proximity of 'The Elms' Grade 2 Listed Building and a Conservation Area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site also contains and is in proximity to TPO's, therefore development is subject to an assessment of impact on the protected tree(s) on/in proximity of the site in order to demonstrate how they can be safeguarded.	Currently Suitable - Subject to Further Detailed Assessment	As a part brownfield and part greenfield site within the development boundary, the site is considered suitable in principle for employment development. However, suitability is subject to appropriate management of any physical, heritage and environmental constraints present. The site also contains and is in proximity to TPO's, therefore development is subject to an assessment of impact on the protected tree(s) on/in proximity of the site in order to demonstrate how they can be safeguarded.
SHR012	Land off Racecourse Lane, Shrewsbury	Shrewsbury	1.81	54	0.72	Site between racecourse Lane and RSH. Adjacent to Mytton Oak GP surgery to W and nurses accommodation and car parking to E; to N is Redwoods Centre (mental health care) and hospital maintenance buildings . Site is currently open space (in PPG17 study) used for informal recreation and consists of open grassland with some scrub trees on boundaries. Site has road frontage onto Racecourse Lane and Wellwood Close access could be from either; pedestrian access via Racecourse Lane to existing established links. Boundaries clearly defined to W by Racecourse Lane GP surgery and Redwoods Centre however E boundary with Hospital uses not clearly defined.	Residential estate development to W and Hospital to E.	Not Suitable	Greenfield site within development boundary. However much of the site comprises an identified amenity green space. Development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site is also in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	Greenfield site within development boundary. However much of the site comprises an identified amenity green space. Development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site is also in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
SHR014	Site at New Zealand House, Abbey Foregate, Shrewsbury	Shrewsbury	0.48	14	0.19	Brownfield site off Abbey Foregate comprising New Zealand House (an office block) and associated car parking/amenity area. Site has frontage onto Abbey Foregate to N and adjoins a recently converted apartment block (formerly offices) to W and retirement accommodation to E, and Reabrook valley to S. Some scrub trees and vegetation along Reabrook valley. Part of S portion of site within flood zones 2 and/or 3.	Character to the north is predominantly residential. Character to the east and west are a mix of residential and commercial. Character to the south is typified by a natural/semi-natural open space along the bank of the River Severn.	Currently Suitable - Subject to Further Detailed Assessment	The portion of the site located within flood zones 2 and/or 3 is unsuitable for development. This portion of site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is suitable for development subject to appropriate management of any physical, heritage and environmental constraints present. For instance the suitability of the access to serve the redevelopment of the site is subject to highway approval. The site is located within a Conservation Area and adjacent to a Grade 2 listed building, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. Furthermore, the site contains and is within proximity of TPO's. Consequently development is subject to an assessment of impact on the protected tree(s) on/in proximity of the site in order to demonstrate how they can be safeguarded. The site is also within 100m of a Local Nature Reserve so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Currently Suitable - Subject to Further Detailed Assessment	The site is currently in employment use (buildings are located in the element of the site located outside of flood zones 2 and/or 3). The portion of the site located within flood zones 2 and/or 3 is unsuitable for development. This portion of site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is suitable for development subject to appropriate management of any physical, heritage and environmental constraints present. For instance the suitability of the access to serve the redevelopment of the site is subject to highway approval. The site is located within a Conservation Area and adjacent to a Grade 2 listed building, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. Furthermore, the site contains and is within proximity of TPO's. Consequently development is subject to an assessment of impact on the protected tree(s) on/in proximity of the site in order to demonstrate how they can be safeguarded. The site is also within 100m of a Local Nature Reserve so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
SHR015	Land at Whitehall	Shrewsbury	1.01	30	0.41	Brownfield site currently in use as Shropshire Walk-in Health Centre formerly Whitehall Govt offices. Site comprises flat roofed 2/3 storey office building and tarmac car parking area. Site has road frontage to Monkmoor Rd and is surrounded by existing residential properties of 19thC and early 20thC of Bishop St to S; Clifford St to W and Bishop St to N. Monkmoor Rd to E. Site contains 2 listed structures and some established trees esp. on S boundary. Good existing pedestrian links via Monkmoor Rd.	Residential.	Currently Suitable - Subject to Further Detailed Assessment	Site is located in a longstanding established residential area and would be suitable for open market residential development subject to assessment and management of physical, environmental and/or heritage constraints. For instance the site contains and is in proximity of a listed buildings; it is also located in a conservation area; and proximity of a scheduled monument, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.	Currently Suitable - Subject to Further Detailed Assessment	Currently in employment use so continued employment use subject to compatibility with adjoining uses is appropriate. Suitability is subject to assessment and management of physical, environmental and/or heritage constraints. For instance the site contains and is in proximity of a listed buildings; it is also located in a conservation area; and proximity of a scheduled monument, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.
SHR016	Shrewsbury Training and Development Centre, Racecourse Crescent, Shrewsbury	Shrewsbury	0.31	9	0.13	Current Shropshire Council Training and Development Centre. Brownfield site comprising 1/2 storey buildings and tarmac car parking area all in SC ownership. Road frontage to Racecourse Cre. Boundaries clearly defined by Racecourse Cres to S and existing residential properties to E and W. N boundary not so clear - with rest of car park. Some established trees on W and S boundaries. Site also contains Electricity Sub-Station.	Residential, rest of car park and Monkmoor Rec ground to N	Currently Suitable - Subject to Further Detailed Assessment	Site is located in a longstanding established residential area and would be suitable for open market residential development subject to assessment and management of physical, environmental and/or heritage constraints. For instance the ability to provide an appropriate access is subject to highway approval. The site is also within 300m of conservation area and 100m of Grade 2 listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	Currently in employment use so continued employment use subject to compatibility with adjoining uses is appropriate and appropriate assessment/management of physical, environmental and/or heritage constraints. For instance the ability to provide an appropriate access is subject to highway approval. The site is also within 300m of conservation area and 100m of Grade 2 listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.

SHR011	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied by a Scout Group with 25 yr. lease so site will only become available during this time if an alternative location can be found for them (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Not Currently Available - Unlikely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied by a Scout Group with 25 yr. lease so site will only become available during this time if an alternative location can be found for them (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). The site is also considered suitable for development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically TPO's on site, impact on Grade 2 Listed Building 'The Elms' and satisfactory access. If suitable mitigation of the identified constraints were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available (subject to any further necessary viability assessment). Achievability and viability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. The site is however considered suitable for development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically TPO's on site, impact on Grade 2 Listed Building 'The Elms' and satisfactory access. If suitable mitigation of the identified constraints were possible, the sites development potential would also depend on confirmation of the sites achievability and viability; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
SHR012	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. However, the site is considered suitable for development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically the site contains listed buildings, is located in a conservation area and proximity of other heritage assets. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
SHR016	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been promoted through the call for sites. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for open market residential development. Suitability of the site for open market residential development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. SHR019	Land off Montgomery Way, Shrewsbury	Shrewsbury	1.58	47	0.63	Remaining site to rear of Montgomery Way - previous application for affordable housing. Long standing open space currently used for informal recreation. New residential development to N; E boundary with Shrewsbury Sports Village, S and W boundary with old Shrewsbury-Newport canal now footpath and cycle way - NCN route 81. Many established trees along S and W boundary. Road frontage and access via Sandhurst Meadows; good pedestrian links via established networks. Site has slight rise from S to N. Evidence of GCN activity on site.	Mixed use - residential to N and open space/recreation use to S and W	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and appropriate assessment and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval. It is also understood that the site is an informal open space, the implications of its development will therefore require due consideration. The site is within 250m of a Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a wooded belt subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. The site also has evidence of GCN activity.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and appropriate assessment and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval. It is also understood that the site is an informal open space, the implications of its development will therefore require due consideration. The site is within 250m of a Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a wooded belt subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. The site also has evidence of GCN activity.
SHR020	St Michaels House, St Michaels Street, Shrewsbury	Shrewsbury	0.26	8	0.10	Brownfield site within development boundary - site comprises 2 storey red-brick Victorian former school building now in use as podiatry clinic and associated tarmac car park. Site has road frontage to St Michaels St and separate road access from St Michaels St as well as good pedestrian links to town centre and nearby facilities. Site has clearly defined boundaries on all four sides. Some established trees on NE boundary.	Mixed residential some older 19thC properties and some more recent 21stC brownfield redevelopment. Large area open space and recreation facilities adjacent to NE of site.	Currently Suitable - Subject to Further Detailed Assessment	As a brownfield site located within development boundary, the site is suitable in principle for open market residential development. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance as a brownfield site, suitable mitigation is required. The site contains an electricity sub-station which will require due consideration. The suitability of the current access to serve the redevelopment of the site is subject to highway approval. The site is located within a Conservation Area and in proximity of number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Currently Suitable - Subject to Further Detailed Assessment	As a brownfield site currently in employment use and located within development boundary, the site is suitable in principle for employment development - subject to compatibility with adjoining uses (which is likely to limit it to office based employment). Suitability is also subject to appropriate management of any physical, heritage and environmental constraints present. For instance as a brownfield site, suitable mitigation is required. The site contains an electricity sub-station which will require due consideration. The suitability of the current access to serve the redevelopment of the site is subject to highway approval. The site is located within a Conservation Area and in proximity of number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR021X	Land at Hubert Way	Shrewsbury	0.19	N/A	N/A						
SHR022X	Brierly House, Centre for the Deaf	Shrewsbury	0.12	N/A	N/A						
SHR023	Land north west of Ellesmere Road roundabout, Shrewsbury	Shrewsbury	21.95	658	8.78	Large greenfield site to NW of Shrewsbury outside development boundary. Site currently in agricultural use for hay/silage and arable crops. Site currently as 2 fields split approx. 50:50 by irregular line of established hedgerow and trees. Boundaries clearly defined on 3 of 4 sides: by Bomere Heath road to S; by Ellesmere Rd to E; by lane to Huffley Farm to W but no clear definition to N. Some established trees and hedgerows on S, W and E boundaries as well as some scattered on N section of site. Site has road frontage to E onto Ellesmere Rd and S onto Bomere Heath road. Pedestrian links poor no existing footways or established network. 300KV overhead line across NE corner and pylon on site.	Agricultural use and farm and farm buildings of Huffley Farm to Now	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within the open countryside. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of the settlement by virtue of Ellesmere Road and road to Bomere Heath and also projects into the countryside, this will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval. There are 300kv overhead line and pylons on the site. This site is within 1km of a Natura 2000 site (Ramsar site at Hencott Pool/Wood). Consequently, development is subject to an appropriate assessment under the Habitats Regulations.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. The ability to provide an appropriate access to and into the site is subject to highway approval. There are 300kv overhead line and pylons on the site. This site is within 1km of a Natura 2000 site (Ramsar site at Hencott Pool/Wood). Consequently, development is subject to an appropriate assessment under the Habitats Regulations.
SHR025	Land east of Edgebold Roundabout, Shrewsbury	Shrewsbury	2.33	70	0.93	Site is greenfield site outside development boundary adjacent to A5 bypass at roundabout junction with A488 (Edgebold roundabout) S of A488 and E of A5. Site in agricultural use for grazing/pasture Newton Farm lies approx. 80m to E. Site has defined boundaries with main roads and E due to existence of established trees and hedgerow along field boundaries. Site has road frontage to both A488 and A5 but access only possible off A488 potential for access to be developed in conjunction with adjacent site to E - SHR027. No existing pedestrian links.	Agricultural land	Not Suitable	The site is located outside and detached from the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, due to the sites location detached from the built form of the settlement, in isolation it is not considered suitable for development. The site may have long term potential as part of a wider release in this location subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of the settlement and into the site is subject to highway approval. The site is also within 100m of a Grade 2 listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located outside and detached from the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, due to the sites location detached from the built form of the settlement, in isolation it is not considered suitable for development. The site may have long term potential as part of a wider release in this location subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR026	land adjacent to A5 / A49 roundabout, east of Shrewsbury	Shrewsbury	23.60	708	9.44	Large greenfield site to east of Shrewsbury outside development boundary and east of river severn adjacent to A5/A49 junction at Preston Boats. Currently in agricultural use for arable/fodder crops. Site is bounded by A5 bypass and A49 to E, River Severn and farmland to W, Shrewsbury to Telford rail line to N and farmland to S. Boundaries with road, rail and river are clearly defined but boundaries with farmland appear arbitrary and undefined. Site is bounded by A5/A49 bypass and has road frontage technically but access likely to be difficult. Pedestrian access non-existent. Site is cut-off from Shrewsbury and any nearby settlements. Site slopes E-W down to river from bypass.	Agricultural land	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, a small portion of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of the settlement and the services and facilities within it by the River Severn, a significant physical barrier which will require due consideration, particularly for open market residential development. The sites only road frontage is onto the A49 and there are currently no junctions that would serve development of this site, therefore the ability to provide an appropriate access to and into the site is unclear and any proposed access would be subject to highway approval. The site is proximity to Local Wildlife Sites - River Severn and Longnor Hall, Heronry, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within 300m of Longnor Hall registered park, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. The site is located within countryside, as such mixed use development is contrary to policy. Furthermore, a small portion of the site is located within flood zone 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may be suitable for development subject to confirmation of the ability to provide an appropriate access to and into the site (which is currently unclear), any proposed access is subject to highway approval; and consideration of the sites separation from the built form of the settlement by the River Severn. Suitability is also subject to confirmation of the sites availability; appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and where appropriate the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. As the site is located within countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. However, a small portion of the site is located within flood zone 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may be suitable for other forms of employment development subject to confirmation of the ability to provide an appropriate access to and into the site (which is currently unclear), any proposed access is subject to highway approval; and consideration of the sites separation from the built form of the settlement by the River Severn. Suitability is also subject to confirmation of the sites availability, achievability and viability; appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and where appropriate the outcome of a visual impact and landscape sensitivity assessment.

SHR027	Land at Newton Farm, Hanwood Road, Shrewsbury	Shrewsbury	16.82	505	6.73	Site is greenfield site outside development boundary adjacent to site SHR025 and A5 bypass at roundabout junction with A488 (Edgebold roundabout) S of A488 and E of A5. Site in agricultural use for grazing/pasture includes Newton Farm house and buildings. Site has defined boundaries with main A488 to N and W/S due to existence of established trees and hedgerow along field boundaries. Site has road frontage to A488 access possible off A488 potential for access to be developed in conjunction with adjacent site to W - SHR025. No existing pedestrian links.	Agricultural land	Not Suitable	The site is located outside and detached from the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, due to the sites location detached from the built form of the settlement, in isolation it is not considered suitable for development. The site may have long term potential as part of a wider release in this location subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site also contains a Grade 2 listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located outside and detached from the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, due to the sites location detached from the built form of the settlement, in isolation it is not considered suitable for development. The site may have long term potential as part of a wider release in this location subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within 100m of a Grade 2 listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR031	Land rear of Abotts House, Upper Battlefield, north of Shrewsbury	Shrewsbury	1.67	50	0.67	Greenfield site outside Shrewsbury's development boundary in ribbon settlement of Upper Battlefield. Agricultural site in use as rough grazing. Clear defined boundaries of established trees and hedgerows to N, S, and E to W with residential properties along A49. Site does not have road frontage but has access point onto A49, pedestrian access extremely limited but is footway/pavement along A49.	Agricultural land to N, S and E with residential properties to W.	Not Suitable	The site is located outside and detached from the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore the site is detached from the built form of the settlement, being more closely associated with linear development along the A49 Shrewsbury Road. The site is also within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.	Not Suitable	The site is located outside and detached from the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site is detached from the built form of the settlement, being more closely associated with linear development along the A49 Shrewsbury Road. The site is also within proximity of ancient woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.
SHR032	Land north east of Ellesmere Road roundabout, Shrewsbury	Shrewsbury	17.48	524	6.99	Large greenfield site outside development boundary to north of Battlefield Enterprise Park sandwiched between A528 Ellesmere Rd and Shrewsbury Battlefield registered site. Site currently in agricultural use as 3 separate fields used for arable and fodder crops. Field in SW corner approx. 3.6ha is in SC freehold. Boundaries are clearly defined to W by A528 to S by A5124 (Battlefield distributor road) and E by historic battlefield, to N is not clearly defined - arbitrary line running across field. Road frontage onto A528 Ellesmere Rd and A5124, and access onto either. Pedestrian access via existing footway on A5124 to established network.	Agricultural and business use on Battlefield Enterprise Park.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is adjacent to but outside the development boundary. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of the settlement by virtue of Ellesmere Road and Battlefield distributor road, the site also projects into the countryside, this will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval. Presence of 300Kv overhead line and pylons on the site. The site is adjacent to historic registered battlefield, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within 1km of a Natura 2000 site (Ramsar site at Hencott Pool/Wood), therefore development is subject to an appropriate assessment under the Habitats Regulations.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of the settlement by virtue of Ellesmere Road and Battlefield distributor road, the site also projects into the countryside, this will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval. Presence of 300kv overhead line and pylons on the site. The site is adjacent to historic registered battlefield, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within 1km of a Natura 2000 site (Ramsar site at Hencott Pool/Wood), therefore development is subject to an appropriate assessment under the Habitats Regulations.
SHR033X	Land at Underdale Road.	Shrewsbury	0.17	N/A	N/A						
SHR035	Land off Mousecroft Lane, Radbrook, Shrewsbury	Shrewsbury	1.60	48	0.64	Former quarry and batching site operations now ceased. Outside development boundary to W of Shrewsbury. Site comprises former quarry related buildings and car parking along with landscaped areas on frontage of site. Site has clearly defined boundaries with adjacent open space through tree and woodland screening of previous quarry operations along with S boundary onto Mousecroft Lane. Site has road frontage and access onto Mousecroft Lane, pedestrian access poor no existing footway along Mousecroft Lane.	Open space with some adjacent residential properties on Mousecroft	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, much of the site comprises an identified natural/semi natural open space. Development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site also contains a small portion of a wildlife site (consequently development on this element of the site is likely to lead to a significant adverse effect and is contrary to policy) and is also surrounded by Wildlife Sites: Radbrook-Mousecroft Lane (consequently development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm). The Ecology team has confirmed likely presence of GCN. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, much of the site comprises an identified natural/semi natural open space. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR036X	Upper Belle Vue	Shrewsbury	0.06	N/A	N/A						
SHR037	Allotments, Stanley Lane, Meole Brace	Shrewsbury	1.80	54	0.72	Current allotment site within development boundary on SW edge of Shrewsbury to S of Meole Brace secondary school. Site boundaries are clear and defined by Stanley Lane to N, Shrewsbury to Aberystwyth rail line to E, Longden Rd Business Park (protected employment land) to S, and residential properties on Silver Birch Drive to W. Site has road frontage and vehicle access onto Stanley Lane. Pedestrian access onto footway on Stanley lane then to links via established network. Some established trees on site boundaries and road frontage. Flat site.	Residential to E and W; employment	Not Suitable	The site is located within the development boundary. However, it comprises an identified allotment. Development of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore, the ability to provide an appropriate access to and into the site is subject to highway approval due to the restricted nature of Stanley Lane and capacity of the rail bridge. The site is also within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located within the development boundary. SHR038	Land off Kemps Eye Avenue	Shrewsbury	0.46	14	0.18	Flat greenfield site currently open space (natural and semi-natural PPG17) and part car park and part of Marysville medical practice. Realistically site should now be redrawn to reflect construction of medical practice. Revised site does not have road frontage, vehicle access only via medical practice car park so effectively landlocked. Pedestrian access via existing established network. Revised site has clear defined boundaries with residential properties to W and S, medical practice to N and Shrewsbury Aberystwyth rail line to E. Some established trees and hedgerows on site boundaries.	Residential, further open space on opposite side railway,	Not Suitable	The site is located within the development boundary. However, much of the site comprises an identified natural/semi-natural open space. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore, Marysville medical practice and its car park has been constructed on part of the site (the element that is not identified as a natural/semi-natural open space), the ability to provide an appropriate access to the remainder of the site is unclear.	Not Suitable	The site is located within the development boundary. However, much of the site comprises an identified natural/semi-natural open space. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore, Marysville medical practice and its car park has been constructed on part of the site (the element that is not identified as a natural/semi-natural open space), the ability to provide an appropriate access to the remainder of the site is unclear.
SHR039X	Former School House, Long Row	Shrewsbury	0.14	N/A	N/A						
SHR040	Land at Old Coleham adjacent Severn Stars Public House, Shrewsbury	Shrewsbury	0.21	6	0.08	The site consists of a car park within the built form of Shrewsbury.	Surrounding character is varied, it includes further car parking, retail, other commercial uses and residential.	Not Suitable	The site is located within the Shrewsbury development boundary, however it is located within flood zones 2 and/or 3. Therefore the site is not suitable as it will only be considered to have development potential if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere. Furthermore the site is located in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of a scheduled monument, conservation area and a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. SHR041X	Faith Cottage, Sabrina Court	Shrewsbury	0.04	N/A	N/A						
SHR042	Land off Whitecroft Road adjacent Reabrook roundabout, Shrewsbury	Shrewsbury	0.57	17	0.23	Triangular greenfield site within development boundary adjacent Reabrook roundabout. Site is formal open space as part of Reabrook valley and LNR. Site is also SC freehold. Site is grassed/scrub open space with established trees and hedgerows forming boundaries. To W is Reabrook roundabout, S residential estate development, E is open space of Rea Brook Valley LNR, N is Pritchard Way inner relief road. Site has road frontage onto roundabout and potential access off Uplands Drive to S. Pedestrian access via existing established network.	Residential estate development to S; N & E open space; W roundabout and inner relief road	Not Suitable	Greenfield site within development boundary. However, the site comprises an identified natural/semi-natural open space. Development of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore the site contains part of the Rea Brook Valley LNR, consequently development is likely to lead to a significant adverse effect on this locally designated site(s) and as such is contrary to policy. This site is therefore unsuitable for development. There is also a lack of obvious suitable access as the site only fronts onto a roundabout.	Not Suitable	Greenfield site within development boundary. However, the site comprises an identified natural/semi-natural open space. Development of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore the site contains part of the Rea Brook Valley LNR, consequently development is likely to lead to a significant adverse effect on this locally designated site(s) and as such is contrary to policy. This site is therefore unsuitable for development. There is also a lack of obvious suitable access as the site only fronts onto a roundabout.
SHR043X	Moneybrook House, Knolls Farm Close	Shrewsbury	0.13	N/A	N/A						
SHR044	Upper Battlefield, north of Shrewsbury	Shrewsbury	5.92	177	2.37	one section of this site superseded by SHR195 call for sites 2017. Linear greenfield site outside development boundary between A49 on E and Shrewsbury-Crewe rail line to W. Site is currently divided into 2 parcels by access track to Battlefield farm and used for grazing/fodder crops. Road frontage exists to A49 along entire E boundary of site, additional vehicle access also off road to 1403 centre. Clear and defined boundaries to W with rail line to E with A49, to S with 1403 access road and residential development to N. Boundaries largely comprised established hedgerows and some trees.	Agricultural land and some residential also farm buildings. To W over rail line is registered historic battlefield. To SE is mixed employment land.	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, the site projects into the countryside and development on the site could be described as ribbon development. The site is also separated from the built form of the settlement by agricultural fields.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is not considered suitable for other forms of employment development as it projects into the countryside; development on the site could be described as ribbon development; and the site is also separated from the built form of the settlement by agricultural fields.

SHR038	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development as much of the site comprises an identified natural/semi-natural open space. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore, Marysville medical practice and its car park has been constructed on part of the site (the element that is not identified as a natural/semi-natural open space), the ability to provide an appropriate access to the remainder of the site is unclear. SHR046	Land at Calders House, Upper Battlefield, north of Shrewsbury	Shrewsbury	0.51	15	0.20	Part greenfield site outside Shrewsbury development boundary. Site lies E of A49 to N of livestock market. Comprises large single dwelling and associate car parking outbuildings etc then large grazing/garden area including pond. Has existing frontage and access onto A49, no pedestrian access. Boundaries clearly defined by A49 to W and existing hedgerow boundaries N,E and S. Some established trees at E end of site and at W end on road frontage. Pond likely to have implications for GCN.	Agricultural land	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, the site is separated from the development boundary and the built form of the settlement by agricultural land.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is separated from the development boundary and the built form of the settlement by agricultural land, therefore it is unsuitable for other forms of employment development.
SHR053	Land to the west of Ellesmere Road (opposite Ellesmere Drive), Shrewsbury	Shrewsbury	0.83	25	0.33	Greenfield site outside to adjacent to development boundary to W of Ellesmere Rd. Site is currently grass and scrub used for informal recreation and borders wildlife corridor of recent residential development to W and S also seasonal pond on site. Likely to be GCN and other wildlife implications. Road frontage onto Ellesmere Rd but no existing vehicle access; pedestrian access via established network. Site has slight downward slope E-W from Ellesmere Rd. E boundary with Ellesmere Rd, W boundary with recent Lovell Homes development adjacent railway; N boundary with Crest Nicholson residential development; S boundary with existing 19thC terraced housing on Ellesmere Rd.	Residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. As such open market residential development is contrary to policy. However the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. Capacity of Ellesmere Road and key junctions/pinch points in the area is a key consideration in this location. The site is within 500m of Old River Bed SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. The site is within 300m of Conservation Area and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a number of TPO's, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is separated from the built form of the settlement by the A49, this will require due consideration. The site is adjacent to a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
SHR054c	Land east of Shrewsbury Sports Village, Shrewsbury	Shrewsbury	3.88	116	1.55	The site consists of an agricultural field, several wooded areas and a tributary of the river severn. The site is also crossed by a public footpath. The sites northern and western boundaries is defined by the B5062, its western boundary is defined by the A49, its southern boundary is defined by a wooded belt.	Character to north is agricultural. Character to east is woodland/ponds, beyond which it is agricultural. Character to the west is a mix of agricultural and leisure uses (beyond the A49). Character to the south is a mix of agricultural, woodland and some rural dwellings.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, approximately 60% of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is separated from the built form of the settlement by the A49, this will require due consideration. The site is adjacent to a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, approximately 60% of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is separated from the built form of the settlement by the A49, this will require due consideration. The site is adjacent to a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.

SHR055	Land south of Mytton Oak Road, Shrewsbury	Shrewsbury	6.54	196	2.62	Site part superseded by new submission 2017 by SHR161. Greenfield site outside but adjacent to development boundary comprising Bowbrook allotments, agricultural land used for grazing/fodder and 5 separate detached dwellings at various points around the site. Site has linear element extending S to include Ley Grange. Development of whole site would entail loss of allotments. Site has scattered mature trees and mixture of established and remnant hedgerows defining boundaries with neighbouring agricultural land. Site has road frontage onto Mytton Oak Rd and existing vehicle access to allotments; pedestrian access via existing established network.	Residential to N, agricultural to S, and E. W is site for proposed remembrance garden 12/05060/FUL pp 20/02/2013	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. As such open market residential development is contrary to policy. Furthermore, approximately 25% of the site comprises an identified allotment. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance detailed consultation with Highways Authority is required to determine whether an appropriate access can be provided into the site. The site is also adjacent to a proposed Remembrance Garden so development of this site will require appropriate sensitive layout and design. The site contains and is within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, approximately 25% of the site comprises an identified allotment. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance detailed consultation with Highways Authority is required to determine whether an appropriate access can be provided into the site. The site is also adjacent to a proposed Remembrance Garden so development of this site will require appropriate sensitive types of employment (likely office based), layout and design. The site contains and is within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
SHR056	Land south of Washford Road, Meole Brace, Shrewsbury	Shrewsbury	6.51	195	2.60	Greenfield site outside but adjacent to Shrewsbury development boundary. Site comprises no. of fields currently in agricultural use and including large single barn/storage on N boundary. Site is adjacent to Shrewsbury - Aberystwyth rail line to W and Rea Brook to S - significant proportion (c. 33%) of site in flood zones 2 and/or 3. Site is further bounded by Washford Rd and Meole Brace estate to N; and additional agricultural land to E. Site has road frontage and vehicle access to Washford Rd and pedestrian access via existing established network. Site is well contained by rail line, Rea Brook and Washford Rd and boundaries are defined by trees and hedgerows.	Agricultural to S and W and residential to N.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. As such open market residential development is contrary to policy. Furthermore, approximately 33% of site is in flood zones 2 and/or 3 (southern portion of the site), therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site (particularly with regard to the capacity of Washford Road and rail bridge) is subject to highway approval. The site is in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within 300m of listed buildings at Nobold Grange, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 33% of site is in flood zones 2 and/or 3 (southern portion of the site), therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR057	Land West of Gains Park Way, Shrewsbury	Shrewsbury	51.46	1544	20.58	Large greenfield site outside but adjacent to development boundary on W of Shrewsbury between Gains Park development and A5 bypass, currently in agricultural use for mix off grazing, fodder and arable crops. Contains original but still operational Corner Farm (Oak Farm now in parcel SHR177) and associated buildings and The Yews individual property. Site has road frontage onto Gains Park Way, Mytton Oak Road and Corner Farm Drive with existing vehicle access off Corner Farm Drive. Site has clearly defined boundaries to W with A5 bypass, E with Gains Park Way and S with Mytton Oak Rd; N boundary is with Shrewsbury West SUE. Boundaries mostly trees and hedgerows some established and mature. Site has scattered trees throughout some mature but no TPO/Veteran trees recorded on site. Site is bisected by significant area within flood zones 2 and/or 3 - approx. 11% of site.	Residential to E - Gains Park, agricultural to S and W and Shrewsbury SUE to N.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. As such open market residential development is contrary to policy. Furthermore, an area in the central portion of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to the highway approval. The site contains grade 2 listed building at Corner Farm, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. There are also a number of trees subject to TPO protection in proximity of the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, an area in the central portion of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to the highway approval. The site contains grade 2 listed building at Corner Farm, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. There are also a number of trees subject to TPO protection in proximity of the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
SHR058	Land at Sundorne Castle, east of Shrewsbury	Shrewsbury	34.65	1040	13.86	Large greenfield site to E of Shrewsbury outside but not adjacent to development boundary. Site currently in agricultural use for grazing and fodder crops. Site contains number of listed buildings associated with Sundorne Castle and number of residential properties. Also contains extensive area of filled ground on W boundary along line of canal arm (?) now heavily wooded with many established trees. Site is irregular shape and boundaries not always clearly defined. Site has road frontage onto Newport Rd (B5062) and existing vehicle access; pedestrian access difficult no existing pavement or footway. To S of site is Shrewsbury Rugby Club, to W is agricultural land and solar farm; to E and N is agricultural land. Site also contains Sundorne Pool LWS and significant area in flood zones 2 and/or 3 approx. 22% of site. SW corner of site also bisected by 33kv overhead lines.	Surrounding uses are primarily agricultural, although there is a solar farm to the north-west and outdoor sports facilities to the south-east.	Not Suitable	Greenfield site outside the development boundary. As such open market residential development is contrary to policy. The site is also separated from the built form of the settlement by agricultural fields and the A49 which represents a significant physical barrier. Furthermore, approximately 22% of site is located in flood zones 2 and/or 3 - along the sites western boundary closest to the built form of the settlement, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site also contains Sundorne Pool Local Wildlife Site (again on the element of the site in closest proximity to the built form of the settlement), consequently development on this element of the site and an appropriate buffer is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. The site also contains 5 grade 2 listed buildings associated with Sundorne Castle, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. Due to these factors the site is considered unsuitable for development.	Not Suitable	Greenfield site outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 22% of site is located in flood zones 2 and/or 3 - along the sites western boundary closest to the built form of the settlement, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is not considered to have potential for other forms of employment development as it is separated from the built form of the settlement by agricultural fields and the A49 which represents a significant physical barrier. The site also contains Sundorne Pool Local Wildlife Site (again on the element of the site in closest proximity to the built form of the settlement), consequently development on this element of the site and an appropriate buffer is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. The site also contains 5 grade 2 listed buildings associated with Sundorne Castle, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.
SHR059X	Builders Yard, Washford Road, Meole Brace.	Shrewsbury	0.09	N/A	N/A						
SHR060	Land at Crowmeole/Upper Edgebold, Shrewsbury	Shrewsbury	17.26	518	6.90	Large greenfield site to W of Shrewsbury outside but adjacent to development boundary. Site consists number of fields currently in agricultural use for grazing/fodder crops. Site is currently landlocked and has no road frontage or separate vehicle access - however access likely to be delivered through adjacent allocated site (SHREW019 Land at Radbrook). No pedestrian access. Site is currently surrounded by agricultural use but N and E boundaries will be with housing as allocated site developed. Boundaries are clearly defined by existing hedgerows and trees. Hedgerows and trees also present within site marking internal field boundaries.	Character to the south and west is predominantly agricultural. Character to the north and east is a mix of residential/ongoing residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints, such as confirmation of the ability to provide an appropriate access to and into the site and ensuring appropriate links with the adjacent development sites.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints, such as confirmation of the ability to provide an appropriate access to and into the site and ensuring appropriate links with the adjacent development sites.

SHR055	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, approximately 25% of the site comprises an identified allotment, development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance proximity to the Remembrance Garden and the ability to provide an appropriate access.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. As the site is located in open countryside employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 25% of the site comprises an identified allotment, development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development due to its isolated location and consequent lack of amenities; implications of part of the site (that closest to the built form of the settlement) being located in flood zones 2 and/or 3; impact on the Sundorne Pool Local Wildlife Site, part of which is within the site boundary (and is that closest to the built form of the settlement); and potential impact on the setting of 5 listed buildings within the site boundary.	Rejected	Availability, achievability and viability of the site are unknown. However the site is not considered suitable for development due to its isolated location and consequent lack of amenities; implications of part of the site (that closest to the built form of the settlement) being located in flood zones 2 and/or 3; impact on the Sundorne Pool Local Wildlife Site, part of which is within the site boundary (and is that closest to the built form of the settlement); and potential impact on the setting of 5 listed buildings within the site boundary.
SHR059X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
SHR060	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However as the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

SHR063	Land at Hanwood Road / Nobold Lane, Shrewsbury	Shrewsbury	2.82	85	1.13	Greenfield site outside but adjacent to development boundary on W edge of Shrewsbury. Site consists of single field in agricultural use for grazing/fodder crops with redundant/derelict barn in N corner of site. Site has road frontage onto Hanwood Rd and Nobold Lane. Vehicle access to barn off Hanwood Rd. Pedestrian access via existing established links on Hanwood Rd. Boundaries are clearly defined by Hanwood Rd to NW and Nobold Lane to NE; SE is further agricultural land separated by clear line of trees and hedgerows; SW boundary with properties and gardens of Brickyard Cottages. S portion of site contains no. of established trees and was part of former brickworks and contains historic landfill and previous infill sites. Site is opposite SHREW019 allocated site to NW and part adjacent to W edge of Radbrook housing estate. OS map shows ponds in S portion of site - maybe seasonal.	Agricultural to NW and S residential to N, SW and E	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the southern portion of site approx. 0.75 ha (25%) is a former brickyard and historic landfill/infill site, appropriate investigation and potential mitigation may therefore be required. The ability to provide an appropriate access into the site is subject to highway approval. The site is within 250m of Radbrook-Mousecroft Lane Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within 300m of Grade 2 listed building - Conduit Head off Nobold Lane, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the southern portion of site approx. 0.75 ha (25%) is a former brickyard and historic landfill/infill site, appropriate investigation and potential mitigation may therefore be required. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR064	Land at Shillingston Drive, Shrewsbury	Shrewsbury	0.80	24	0.32	Site is greenfield site within development boundary. Site is currently garden/vacant land to N of Shillingston Drive between Battlefield Court to W and SHREW105 allocated site (u/c) and contains existing residential property - 84 Battlefield Road and part of Lion Coppice woodland. Site has road frontage onto Shillingston Drive but current vehicle access is via Battlefield Road. Pedestrian access via existing established network on Shillingston Drive. Site boundaries clearly defined apart from N boundary which is not clearly defined on the ground. Site contains no. of established trees	Residential to E and W, commercial to S and woodland/garden land to N.	Currently Suitable - Subject to Further Detailed Assessment	Greenfield site within development boundary no in principle policy objections. Previous Planning Permission for Care Home has established principle of development on this site. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site contains a significant number of trees, many of which are subject to TPO protection. There are also a number of other TPOs in proximity of the site, particularly the wooded area to the north of the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Currently Suitable - Subject to Further Detailed Assessment	Greenfield site within development boundary no in principle policy objections. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval. The site contains a significant number of trees, many of which are subject to TPO protection. There are also a number of other TPOs in proximity of the site, particularly the wooded area to the north of the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
SHR065	Land at Monkmoor Road, Shrewsbury	Shrewsbury	1.41	42	0.56	Mixed use site outside but adjacent to Shrewsbury development boundary within loop of River Severn and in proximity of Monkmoor sewage works. Site consists of 2 farm complexes now used for mix of employment uses including office and storage, also holiday lets and residential properties on site. Site is approx. 60% brownfield. Site has road frontage and vehicle access onto Monkmoor Rd. Pedestrian access via existing established network along Monkmoor Rd. Site has clearly defined boundaries to N with Monkmoor Rd; to E with STW access road; to W with boundary of property; to S field boundaries less clearly defined by hedgerows and some fencing. Site adjoins site SHR111. Site has had numerous applications since 2000 associated with various changes of use and minor extensions etc also pp for waste transfer operation associated with Skip Hire business.	To S further scrub land - possibly treated; N River Severn; W employment land and E edge of Monkmoor Rd residential properties.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. If the policy position changes, the site may become suitable. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. The site is within 250m of the River Severn Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 30m of trees subject to a Tree Preservation Order. Development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. Consequently employment development on the site would currently be contrary to policy unless need for and benefit of the development can be demonstrated and the proposal is of a suitable scale. However, the site may have long term potential, subject to policy requirements and/or policy changes. The site is within 250m of the River Severn Wildlife Site. Development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 30m of trees subject to a Tree Preservation Order. Development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
SHR066	Land at Lower Pulley Lane, south of Shrewsbury	Shrewsbury	0.18	5	0.07	Site below threshold but promoted on basis of 5+ on site and within urban setting. Site currently greenfield outside but adjacent to Shrewsbury development boundary in 'green gap' between Shrewsbury and Bayston Hill. Currently rough grazing/scrub land. Boundaries clearly defined to N by Pulley Lane to S by adjacent residential properties; to W by Lower Pulley Lane and E by agricultural land. Road frontage onto Pulley Lane and Lower Pulley Lane; current vehicle access off Lower Pulley Lane. Pedestrian access via established networks from Pulley Lane	Residential to S and N agricultural to E and W	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. The site is located within the Green Gap between Shrewsbury and Bayston Hill. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the sites location within the Green Gap between Shrewsbury and Bayston Hill, this will require due consideration. The design and layout of such a small site is critical to approval along with satisfactory highway access.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site outside but adjacent to the development boundary so within the open countryside. The site is located within the Green Gap between Shrewsbury and Bayston Hill. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the sites location within the Green Gap between Shrewsbury and Bayston Hill, this will require due consideration. The sites size is likely to limit its potential for many forms of employment, additionally any proposed use will need to complement the sites setting and adjacent dwellings. As a result, suitable employment uses are likely to be limited to office based employment. The design and layout of such a small site is critical to approval along with satisfactory highway access.
SHR067	Land at Castle Foregate, Shrewsbury	Shrewsbury	0.38	11	0.15	Brownfield former railway land. In employment use for container self-storage in protected employment zone. Site located between rail lines to Chester and Crewe. Site is bounded by rail lines to E, W S by The Castle Business Park and to N by POS associated with Greenfields Gardens. Site has road frontage to access road and vehicle access under railway bridge via Castle Foregate. Pedestrian access via Castle Foregate to established network. No trees or hedgerows on site, within flood zone 2 and/or 3 of Bagley Brook	Employment land, railway line and associated land, new residential development on Greenfields Gardens and Bagley Social Club.	Not Suitable	Site is within development boundary but as site contained within protected employment land site is contrary to current policy. Furthermore site is located within flood zones 2 and/or 3, therefore it would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The ability to provide an appropriate access is also subject to highway approval - the only potential access point is via underpass off Castle Foregate. The site is within 250m of River Severn Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within 300m of Conservation Area and several Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	Site is within protected employment area - so suitable in principle for employment use. However, the site is located within flood zones 2 and/or 3, therefore it would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The ability to provide an appropriate access is also subject to highway approval - the only potential access point is via underpass off Castle Foregate. The site is within 250m of River Severn Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within 300m of Conservation Area and several Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.

A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is located within the Green Gap and site design/layout and highway access. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. However as the site is located within the countryside, appropriate employment uses are limited to small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is located within the Green Gap, site size and setting; and site design/layout and highway access. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
SHR067	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	The site is in an existing employment use and therefore may be available for more intensive employment uses.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered not currently but likely to become available, achievable and viable (subject to any further necessary viability assessment). However the site is not considered suitable for development as it is protected employment zone and almost entirely within flood zones 2 and/or 3, therefore it would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The ability to provide an appropriate access is also subject to highway approval - the only potential access point is via underpass off Castle Foregate.	Rejected	The sites availability, achievability and viability are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Although the site is located protected employment area - so suitable in principle for employment use. It is also almost entirely located within flood zones 2 and/or 3, therefore it would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The ability to provide an appropriate access is also subject to highway approval - the only potential access point is via underpass off Castle Foregate.

Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
SHR074	Curia Close off Corinthian Close (Underdale) Allotments, Shrewsbury	Shrewsbury	1.15	35	0.46	Currently in use as allotments (sui generis). Site lies to E of Underdale Rd and Corinthian Close and to W of Robertson Way. Site has no road frontage; current vehicle access to allotments via Gregson Close maybe alternative via Curia Close. Pedestrian access via Gregson and Curia Close to established network. Site is bounded by residential properties to W and S; to N is further allotment land and E is Robertson Way. Some established trees and hedgerows on SW, S and E boundaries.	Surrounding character is predominantly residential, however there are further allotments to the north-east.	Not Suitable	Greenfield site within development boundary. However, the site comprises an identified allotment. Development on this site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore, the site is within 250m of River Severn Local Wildlife Site. Therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within 300m of Conservation Area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is within proximity of a number of TPO's, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded.	Not Suitable	Greenfield site within development boundary. However, the site comprises an identified allotment. Development on this site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore, the site is within 250m of River Severn Local Wildlife Site. Therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within 300m of Conservation Area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is within proximity of a number of TPO's, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded.
SHR075X	Salop Leisure, Hereford Road	Shrewsbury	0.17	N/A	N/A						
SHR076	Open Space at Meole Brace, Shrewsbury	Shrewsbury	0.73	22	0.29	The site is an area of natural/semi-natural open space located within the built form of Shrewsbury.	Located to the east of the site is the Holy Trinity Church and its grounds (adjacent to the site). Surrounding uses to north and west are predominantly residential. Uses to the south are also leisure/open space.	Not Suitable	The site is located within the development boundary for Shrewsbury. However development of the site would involve the loss of a natural / semi-natural open space and would only be considered appropriate if alternative provision were possible. Furthermore, the ability to provide an access into the site is unclear. The site does not have a road frontage, being separated from Church Road by a wooded belt which is subject to TPO protection. There is potential for access through the Holy Trinity Church grounds, but it is unclear whether a suitable route exists and an agreement for such a route to be formed could be established - if an agreement could be reached the suitability of such an access would be subject to highway and conservation approval. Additionally, the site is located within a conservation area and is likely to form an important characteristic within the conservation area, as such development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also adjacent to and in proximity of a number of listed buildings and likely to form part of the setting for the adjacent buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of a LNR, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site also contains and in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The site is located within the development boundary for Shrewsbury. However development of the site would involve the loss of a natural / semi-natural open space and would only be considered appropriate if alternative provision were possible. Furthermore, the ability to provide an access into the site is unclear. The site does not have a road frontage, being separated from Church Road by a wooded belt which is subject to TPO protection. There is potential for access through the Holy Trinity Church grounds, but it is unclear whether a suitable route exists and an agreement for such a route to be formed could be established - if an agreement could be reached the suitability of such an access would be subject to highway and conservation approval. Additionally, the site is located within a conservation area and is likely to form an important characteristic within the conservation area, as such development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also adjacent to and in proximity of a number of listed buildings and likely to form part of the setting for the adjacent buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of a LNR, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site also contains and in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
SHR077	S.C.R. Retail Systems, Kendal Road, Shrewsbury	Shrewsbury	3.04	91	1.22	An existing mixed use site encompassing protected employment land (Centurion Park) and residential area (Ambleside) with play area. Also includes area of freehold land - 3.91ha. Contains a range of employment buildings and employment uses. A portion of the site is available for redevelopment and there is a current application for further employment buildings on it. Site contains number of individual TPO's. Lies adjacent to Shrewsbury-Crewe rail line with group TPO on border with site.	To the west and north are employment uses; to the east are residential and retail; to the south is residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within the development boundary, however it is located within an area protected for employment development. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes (although given the value of this employment area, it is unlikely that the policy position would change) and suitable management of any physical, heritage and environmental constraints present. For instance consideration of the implications of loss of employment land in this location. As a brownfield site, suitable investigation and management may be required. There are a number of TPOs located on the site and in proximity to the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is in proximity to a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Surrounding uses include a mix of residential and employment, this context will need to be considered in the design and layout of development.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary and is located within an area protected for employment development. The site is therefore an existing employment site with potential for redevelopment or intensification. Suitability of development is subject to appropriate management of any physical, heritage and environmental constraints present. For instance as a brownfield site, suitable investigation and management may be required. There are a number of TPOs located on the site and in proximity to the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is in proximity to a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Surrounding uses include a mix of residential and employment, this context will need to be considered in the design, layout and type of employment development.
SHR080	Land at Oteley Road, Shrewsbury	Shrewsbury	1.08	32	0.43	Site lies N of Oteley Rd and adjacent Oteley Bungalow. Site bounded by Sutton Grange Drive to E, Meole Brace Golf Course to W, Sutton Nursery to N and Oteley Rd to S. Site currently in agricultural use bounded by established trees to S and W and by hedgerows to N and E. Flat site, with road frontage to Oteley Rd and vehicle access via Sutton Grange Drive. Pedestrian and cycle access via Oteley Rd.	New residential to E, municipal golf course to W, and agricultural to N	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary and forms part of the Shrewsbury South SUE. Therefore open market residential development is suitable in principle. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the need to provide an appropriate highway access using Sutton Grange Drive, approved by Highway Authority. The site is just within 300m of Grade 2* Listed Building - the Greek Orthodox Church, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is in a prominent location and adjacent to residential dwellings and open space, therefore site design and layout must reflect this location.	Currently Suitable - Subject to Further Detailed Assessment	Although the site is allocated for residential development it is suitable in principle for employment development subject to satisfactory highway access and assessment and management of impact on heritage asset. The site is within 300m of Grade 2* LB so development is subject to an assessment of impact on the significance of the setting of the asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in a prominent location and adjacent to residential dwellings and open space, therefore site design, layout and the types of employment uses considered must reflect this location.
SHR081	Site at Wyle Cop, Shrewsbury	Shrewsbury	1.01	30	0.40	Brownfield site currently used as parking. There is some greenfield land on the site and a large portion of the site is available for redevelopment.	The site is in proximity to several listed buildings and is west of the river Severn. To the west and south of the site is mixed use development predominantly retail and residential	Not Suitable	The site is not currently suitable for residential development as the entire site is located within flood zone 2. Therefore the site would only be considered if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, approximately 25% of the site is a natural/semi-natural open space. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.	Not Suitable	The site is not currently suitable for employment development as the entire site is located within flood zone 2. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development as it is entirely within flood zone 2. Therefore the site would only be considered if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, approximately 25% of the site is a natural/semi-natural open space. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development as it is entirely within flood zone 2. Therefore the site would only be considered if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, approximately 25% of the site is a natural/semi-natural open space. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.

SHR083	Land at Sundorne Retail Park. (Current B&Q store)	Shrewsbury	2.48	74	0.99	An existing retail site. Currently contains B&Q store building and associated car parking.	Land north, east and west of the site is used for employment. There are residential buildings south of this site.	Not Suitable	Whilst the site is in the development boundary, it is predominantly located within flood zones 2 and/or 3, therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.	Not Suitable	Whilst the site is in the development boundary, it is predominantly located within flood zones 2 and/or 3, therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.
SHR084	Travis Perkins, Wood Street, Shrewsbury	Shrewsbury	2.74	82	1.10	Existing employment site - builders yard (Travis Perkins)	Residential land to the north and west of the site and open space to the south. Shrewsbury-Crewe rail line and sidings on E boundary.	Not Suitable	The site is not currently suitable for residential development as the entire site is located within flood zone 2 and/or 3. Therefore the site would only be considered if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.	Not Suitable	The site is not currently suitable for development as the entire site is located within flood zone 2 and/or 3. Therefore the site would only be considered if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.
SHR085	Communications House, Harlescott Lane, Shrewsbury	Shrewsbury	1.46	44	0.58	Existing employment site (former BT dept. and offices). Road frontage and vehicle access with Harlescott Lane. Pedestrian and cycle access via Harlescott Lane. Established trees with TPO's on N boundary of site. Shrewsbury-Crewe rail line forms W boundary of site. Site in close proximity to level crossing on Harlescott Lane.	Employment land north, east and west of the site; residential land (off Kendall Road) to the south.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Whilst the site is within the development boundary, it is a protected employment site therefore open market residential development in this location is contrary to policy. The site may have long term potential subject to appropriate policy changes (although given the value of this employment area, it is unlikely that the policy position would change) and management of any physical, heritage and environmental constraints present. For instance consideration of the implications of loss of employment land in this location. As a brownfield site, suitable investigation and management may be required. There are a number of TPOs located on the site and in proximity to the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is in proximity to a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Surrounding uses are primarily employment based and this context will need to be considered in the design and layout of development. Surrounding uses include a mix of residential and employment, this context will need to be considered in the design and layout of development.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary and is located within an area protected for employment development. The site is therefore an existing employment site with potential for redevelopment or intensification. Suitability of development is subject to appropriate management of any physical, heritage and environmental constraints present. For instance as a brownfield site, suitable investigation and management may be required. There are a number of TPOs located on the site and in proximity to the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is in proximity to a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Surrounding uses are primarily commercial, this context will need to be considered in the design, layout and type of employment development.
SHR086	Perkins, Lancaster Road, Shrewsbury	Shrewsbury	4.37	131	1.75	The site has been safeguarded for employment development and it is currently in employment use. Approximately 75% of the site is covered by built form (buildings and hard standing) the remaining 25% of the site is landscaped.	Character to south, east and west is predominantly residential. Character to the north is predominantly employment.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Whilst the site is within the development boundary, it is a protected employment site therefore open market residential development in this location is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance consideration of the implications of loss of employment land in this location. The ability to provide an appropriate access into the site is subject to highway approval. As a brownfield site, suitable investigation and management may be required. There are a number of TPOs located on the site and in proximity to the site, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is in proximity to a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Surrounding uses include a mix of residential and employment, this context will need to be considered in the design and layout of development.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary and is located within an area protected for employment development. The site is therefore an existing employment site with potential for redevelopment or intensification. SHR083	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development as it is almost entirely located within flood zone 2.	Rejected	The sites availability, achievability and viability is unknown. However the site is not considered suitable for development as it is almost entirely located within flood zone 2.
SHR084	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. SHR093	Land to the east of Nobold Lane, Longden Road, Shrewsbury	Shrewsbury	7.96	239	3.18	Greenfield site predominantly flat currently in agricultural use for rough grazing. Bounded to W by Nobold La; to SE by Longden Rd; to N by Mousecroft Lane; and to E by allocated housing site (land off Longden Rd and Mousecroft La). E boundary of site defined by mature trees and established hedgerow along route of stream (seasonal?)	Residential land to the north and east; protected employment land south of the site; and agricultural land west of the site.	Not Suitable	The site lies adjacent to but outside the development boundary. As such open market residential development is contrary to policy. Furthermore the site has been subject to a landscape assessment to inform Planning Application 14/01983/OUT which indicated that this is a sensitive location and therefore unsuitable for development. The ability to provide an appropriate access to, into and through the site is subject to highway approval. The site lies between Shrewsbury and Nobold, which will require significant consideration. The site is located within 250m of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of Listed Buildings at Nobold and Conduit Head, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site lies adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site has been subject to a landscape assessment to inform Planning Application 14/01983/OUT which indicated that this is a sensitive location and therefore unsuitable for development. The ability to provide an appropriate access to, into and through the site is subject to highway approval. The site lies between Shrewsbury and Nobold, which will require significant consideration. The site is located within 250m of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of Listed Buildings at Nobold and Conduit Head, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR096	Land at Coton Grange, Corporation Lane, Shrewsbury	Shrewsbury	18.22	547	7.29	Large irregular, undulating greenfield site outside development boundary containing several small buildings in N portion and including residential properties at S end on Benbow Close and Corporation Lane. Site access via Corporation Lane - substandard single track; no road frontage as such. Site bounded by Shrewsbury-Chester rail line to E, agricultural land/open space to W, old river bed to N; and residential properties off Coton Mount and Corporation Lane. Boundaries defined by hedgerow/field boundaries or residential properties.	Greenfield land surrounding site on north and western sides; residential land south of site.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site lies adjacent to but outside the development boundary. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of the physical, heritage and environmental constraints present. For instance a small portion of site is within flood zone (north western boundary). The topography of the site may constrain development. The ability to provide an appropriate access into the site and impact of its development on the wider network require highway approval/consideration. The site contains and is in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a conservation area and a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site lies adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of the physical, heritage and environmental constraints present. For instance a small portion of site is within flood zone (north western boundary). The topography of the site may constrain development. The ability to provide an appropriate access into the site and impact of its development on the wider network require highway approval/consideration. The site contains and is in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a conservation area and a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR099	Land north east of Woodcote Way, Shrewsbury	Shrewsbury	1.36	41	0.54	Greenfield site outside but adjacent to development boundary. Site contains access road to allocated site Shrew 120 (Land east of Woodcote Way). Currently in agricultural use for arable/fodder crops. Has road frontage and existing access off Woodcote Way, pedestrian and cycle access also via Woodcote Way. Site has clearly defined boundaries SE, SW, NW but NE boundary is arbitrary line across field with no defining features. Site has slight fall SE-NW.	Agric use to NE, golf driving range to NW, residential to SW, schools (Wilfred Owen/Severdale) to SE.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such open market residential development is contrary to policy. Furthermore a small portion of site along its eastern boundary is located in flood zone 2 and/or 3, therefore this element of the site is not suitable as it will only be considered to have development potential if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. The site is also within 250m of a Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However a small portion of site along its eastern boundary is located in flood zone 2 and/or 3, therefore this element of the site is not suitable as it will only be considered to have development potential if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. The site is also within 250m of a Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in a primarily residential area which will have implications for the form of employment development that would be considered appropriate.
SHR100	Land north of Shelton Lane, Shrewsbury	Shrewsbury	8.74	262	3.50	Elongated linear site N of Shelton Lane adjacent to river Severn including land N of Bryn Rd/The Mount. Greenfield site outside but adjacent to development boundary. Linear element of site is currently scrub woodland, larger portion N of Bryn Rd is currently open space/agricultural use - grazing. Highway access and road frontage off Shelton Lane. Boundaries of site clearly defined by River Severn, Shelton Lane and residential properties off Bryn Rd. Site includes element of flood zone and is adjacent to River Severn LWS	Agricultural land to the north and east; the Severn is north of the site. Residential land south and west.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such open market residential development is contrary to policy. Furthermore, much of the linear element of the site that runs parallel to the River Severn is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the various elements of the site/through the site is subject to highway approval. The site contains and is in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is partially located within a conservation area and the remainder of the site is in proximity of a conservation area. The site is also within proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in adjacent to a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However a small portion of site along its eastern boundary is located in flood zone 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the various elements of the site/through the site is subject to highway approval. The site is also in adjacent to a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
SHR101X	Land adj. Red Barn Lane, Shrewsbury	Shrewsbury	0.13	N/A	N/A						
SHR103	Shrewsbury Cricket Club, London Road, Shrewsbury	Shrewsbury	2.46	74	N/A	Site currently used as a cricket ground with associated car parking and club house, changing rooms, practice facilities etc. Greenfield site within development boundary. If site is to be developed suitable alternative site must be provided. Site has road frontage and access off London Rd, pedestrian and cycle access via London Rd and established network. Clearly defined boundaries with surrounding residential properties and London Rd.	Emstrey Crematorium is northeast of the site. Land north, west and south of the site is residential.	Not Suitable	Predominantly greenfield site. However, the majority of the site is an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.	Not Suitable	Development of this site would damage the amenity of the local people due to the loss of outdoor sport facilities. Therefore development should only proceed if a suitable alternative facility is brought forward.

SHR093	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify this matter. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. Furthermore the site has been subject to a landscape assessment to inform Planning Application 14/01983/OUT which indicated that this is a sensitive location and therefore unsuitable for development. The ability to provide an appropriate access to, into and through the site is subject to highway approval. The site lies between Shrewsbury and Nobold, which will require significant consideration.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is located in open countryside, consequently suitable employment development is limited to small scale rural enterprise and diversification schemes. Furthermore the site has been subject to a landscape assessment to inform Planning Application 14/01983/OUT which indicated that this is a sensitive location and therefore unsuitable for development. The ability to provide an appropriate access to, into and through the site is subject to highway approval. The site lies between Shrewsbury and Nobold, which will require significant consideration.
SHR096	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. SHR104	Land North of A5/A458 Welshpool Road Roundabout, Shrewsbury	Shrewsbury	3.30	99	1.32	Greenfield site in agricultural use, to the north of the proposed route of the Oxon Link Road and the Shrewsbury West Sustainable Urban Extension. The site abuts properties within the settlement of Calcott to the north.	Character to the south is currently agricultural, however this land is allocated for development. Character to the east is agricultural/leisure (caravan site). Character to the west is agricultural. Character to the north is mixed residential and agricultural.	Not Suitable	The site is located adjacent to but outside the development boundary. As such open market residential development is contrary to policy. Furthermore, the implications on the loss of the gap between Shrewsbury and Calcott would require consideration. The site would be located to the north of the proposed route of the Oxon Link Road, which would create a level of separation from the settlement of Shrewsbury, which would require due consideration. The land is also proposed as open space within the wider Shrewsbury West SUE, which may be the most appropriate use of this site and if provided as such then site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.	Not Suitable	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the implications on the loss of the gap between Shrewsbury and Calcott would require consideration. The site would be located to the north of the proposed route of the Oxon Link Road, which would create a level of separation from the settlement of Shrewsbury, which would require due consideration. The land is also proposed as open space within the wider Shrewsbury West SUE, which may be the most appropriate use of this site and if provided as such then site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.
SHR105	Golf Course, Oteley Road, Shrewsbury	Shrewsbury	35.41	1062	14.16	Site on S edge of town within development boundary. Currently municipal golf course. Site bisected by Shrewsbury - Ludlow rail line and A5112 Hazeldine Way. Managed golf course appearance with parcel on E edge of site in agricultural use. Rea Brook forms N boundary and also runs through site - Local Nature Reserve. Site contains number of mature trees and established hedgerows. Site boundaries are clearly defined by Rea Brook to N and W by B4380 Oteley Rd to S and with Sutton Grange to E. Road frontage to B4380 access to existing established footpath links. Shropshire Way long distance path follows Rea Brook LNR and other PROWs across site. Relatively flat site with some undulations but steep river terrace on NW boundary.	Residential to W N and E. Agric to E. S B4380 and Meole Brace retail park, STFC football stadium and mixed agricultural land. SW is a fitness gym and pitch and putt site.	Not Suitable	Greenfield site within development boundary. However, much of the site consists of identified open spaces (outdoor sports facilities, natural/semi-natural open space and amenity green space). Development on these elements of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore, the site contains part of and is in proximity to other parts of the Rea Brook Local Nature Reserve, consequently development on and within an appropriate buffer of these elements of the site are likely to lead to a significant adverse effect the designated site and as such is contrary to policy. The site also contains and is in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of one or more listed buildings and a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	Site is suitable in principle for development subject to appropriate management of any physical, heritage and environmental constraints. Specifically assessment of environmental and amenity impacts, provision of a satisfactory highway access supported by a transport impact assessment, appropriate buffering of the local nature reserve and community consultation due to significant size and loss of amenity. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site contains Rea Brook Local Nature Reserve. Consequently this area and an appropriate buffer of this are unsuitable for development or it would likely lead to a significant adverse effect on locally designated site(s) and as such is contrary to policy. Elements of the site are therefore unsuitable for development. Development is also subject to an assessment of impact on the protected tree(s) on/in proximity of the site in order to demonstrate how they can be safeguarded. The site is considered suitable for development in relation to this matter, subject to these safeguarding measures being deemed acceptable.
SHR106	Land to rear of 57 Porthill Rd, Porthill, Shrewsbury	Shrewsbury	0.40	12	0.16	Site to S of Porthill Shrewsbury adjacent to NW corner Shrewsbury School. Site within development boundary and conservation area. Currently used as informal recreation and open space. Clearly defined boundary with residential properties to N and W and Shrewsbury School playing fields to d E. boundary of mixed trees and hedgerows. Flat site no issues with topography. Access not clear - depends on site ownership potential onto Porthill or Roman Rd - no road frontage as such. Pedestrian access via existing established links.	Residential properties to N and W open aspect of Shrewsbury School sports fields to W and S.	Not Suitable	Greenfield site within development boundary - no policy restrictions. However the sites does not appear to have a road frontage, therefore the ability to provide an appropriate access is unclear, any proposed access would be subject to highway approval. If an appropriate vehicular access can be established, the suitability of the site is subject to appropriate policy changes and the management of any other physical, heritage and environmental constraints. For instance there are established trees/hedgerows along site boundaries which will require due consideration. The site is within Conservation Area, therefore development of this site is subject to an assessment of impact on the specified asset(s). Where this shows that substantial harm to or a total loss of significance of the designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of TPOs, consequently development is subject to an assessment of impact on the protected tree(s) on/in proximity of the site in order to demonstrate how they can be safeguarded. The site is considered suitable for development in relation to this matter, subject to these safeguarding measures being deemed acceptable. The site is also within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	Greenfield site within development boundary - no policy restrictions. However the sites does not appear to have a road frontage, therefore the ability to provide an appropriate access is unclear, any proposed access would be subject to highway approval. If an appropriate vehicular access can be established, the suitability of the site is subject to appropriate policy changes and the management of any other physical, heritage and environmental constraints. For instance there are established trees/hedgerows along site boundaries which will require due consideration. The site is within Conservation Area, therefore development of this site is subject to an assessment of impact on the specified asset(s). Where this shows that substantial harm to or a total loss of significance of the designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of TPOs, consequently development is subject to an assessment of impact on the protected tree(s) on/in proximity of the site in order to demonstrate how they can be safeguarded. The site is considered suitable for development in relation to this matter, subject to these safeguarding measures being deemed acceptable. The site is also within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR109	Land at Cross Hill, Shrewsbury (West of Cross Hill Farm; North of Hencott Farm; East of Railway)	Shrewsbury	50.74	1522	20.30	Large area of agricultural land to W of and separated from development boundary. Adjoining Shrewsbury - Chester rail line south of Hencott Pool SSSI/Ramsar/LWS. No obvious access or road frontage. W boundary with rail line; S boundary with track to Hencote Farm; E and N boundary comprise hedgerow and trees with adjacent agricultural land. Veteran trees also present on site.	Agricultural. Hencott Pool SSSI/Ramsar site adjacent to N.	Not Suitable	The site is outside and separated from the development boundary. As such, open market residential development is contrary to policy. The site also contains a small portion of the Hencott Pool - SSSI, Ramsar Site and Local Wildlife Site, therefore development on this element of the site and an appropriate buffer is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy and unsuitable for development. Furthermore, the site is separated from the built form of the settlement by agricultural fields; and the site does not have a road frontage as a result the site in isolation is unsuitable for development. However, the site (excluding that which contains Hencott Pool and an appropriate buffer) may have long term potential as part of a comprehensive development in this location (which would provide greater links to the built form of the settlement and road access) subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the SAMDev Plan stipulates that "The Council recognises that land off Ellesmere Road could be a potential long term direction for growth for the town, but considers that such growth should be linked with the delivery of the Relief Road. The scope for significant developments in that area is particularly affected by the need for the road as, cumulatively, development would have adverse traffic impacts on this major approach to the town centre", these concerns remain, therefore any development in this location is subject to highway constraints which are only likely to be addressed through the construction of the North West Relief Road (this particular site is crossed by the line of this proposed relief road). Furthermore, as the site is in proximity of a Ramsar Site the development is subject to an appropriate assessment under the Habitats Regulations. As the site is in proximity of several sites with SSSI designation, development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. As the site is in proximity of several Local Wildlife Sites, development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site also contains a number of veteran trees and trees subject to TPO protection, it is also in proximity of further veteran trees and trees subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded.	Not Suitable	The site is outside and separated from the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site also contains a small portion of the Hencott Pool - SSSI, Ramsar Site and Local Wildlife Site, therefore development on this element of the site and an appropriate buffer is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy and unsuitable for development. Furthermore, the site is separated from the built form of the settlement by agricultural fields; and the site does not have a road frontage as a result the site in isolation is unsuitable for development. However, the site (excluding that which contains Hencott Pool and an appropriate buffer) may have long term potential as part of a comprehensive development in this location (which would provide greater links to the built form of the settlement and road access) subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the SAMDev Plan stipulates that "The Council recognises that land off Ellesmere Road could be a potential long term direction for growth for the town, but considers that such growth should be linked with the delivery of the Relief Road. The scope for significant developments in that area is particularly affected by the need for the road as, cumulatively, development would have adverse traffic impacts on this major approach to the town centre", these concerns remain, therefore any development in this location is subject to highway constraints which are only likely to be addressed through the construction of the North West Relief Road (this particular site is crossed by the line of this proposed relief road). Furthermore, as the site is in proximity of a Ramsar Site the development is subject to an appropriate assessment under the Habitats Regulations. As the site is in proximity of several sites with SSSI designation, development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. As the site is in proximity of several Local Wildlife Sites, development is subject to an assessment of the impact on this locally designated site. SHR104	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not considered suitable for open market residential development as it is located in the countryside outside of the Shrewsbury development boundary. Furthermore, the implications on the loss of the gap between Shrewsbury and Calcott would require consideration. The site would be located to the north of the proposed route of the Oxon Link Road, which would create a level of separation from the settlement of Shrewsbury, which would require due consideration. The land is also proposed as open space within the wider Shrewsbury West SUE, which may be the most appropriate use of this site and if provided as such then site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.	Rejected	The sites availability, achievability and viability is unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives and any further necessary viability work. However the site is only suitable for employment which is considered to be small scale rural enterprise and diversification schemes. Furthermore, the implications on the loss of the gap between Shrewsbury and Calcott would require consideration. The site would be located to the north of the proposed route of the Oxon Link Road, which would create a level of separation from the settlement of Shrewsbury, which would require due consideration. SHR109	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future. SHR110	Land at Mytton Oak Road, Shrewsbury	Shrewsbury	9.16	275	3.66	Irregular elongated site to W but adjacent to development boundary. Adjacent to existing allocate site SHREW030/R (land at Bowbrook) in agricultural use - grazing. Flat site with some undulations. No road frontage or highways access obvious, no links to existing pedestrian network. Boundaries on all sides comprised trees and hedgerows not clearly defined with adjacent fields.	Agricultural land and buildings. E is allocated housing site.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is unclear. The suitability of any proposed access is subject to highway approval. Furthermore the mature trees and established hedgerows would need to be appropriately managed. Many of these trees are subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is unclear. The suitability of any proposed access is subject to highway approval. Furthermore the mature trees and established hedgerows would need to be appropriately managed. Many of these trees are subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR111	Land at Monkmoor Road, Shrewsbury	Shrewsbury	2.14	64	0.86	Outside but adjacent to development boundary on E edge of town in loop of river Severn adjacent to Monkmoor sewage works. Site is possibly 'made' land from previous sewage treatment and cannot be used for agriculture. Site is currently scrub land with some established trees on W and E boundaries. S portion of site contains existing buildings relating to treatment plant. Boundaries clearly defined to W by access road; N by residential properties and Monkmoor Farm buildings and S by remaining treatment works buildings; E boundary to adjoining scrub land not clearly defined. Site does not have road frontage and access via treatment works access road which is in turn accessed via narrow lane off the end of Monkmoor Rd.	To E further scrub land - possibly treated; N residential properties and Monkmoor Farm industrial estate buildings; W protected employment land and N edge of Hamilton Drive residential properties.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. If the policy position changes, the site may become suitable. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints. The site is within 250m of two Wildlife Sites. Development is subject to an assessment of the impact on these locally designated sites. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located on the edge of the settlement, adjacent to but outside of the settlement development boundary. Consequently employment development on the site would currently be contrary to policy unless need for and benefit of the development can be demonstrated and the proposal is of a suitable scale. However, the site may have long term potential, subject to policy requirements and/or policy changes. The site is within 250m of two Wildlife Sites. Development is subject to an assessment of the impact on these locally designated sites. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
SHR115	Land adj. Longden Road, Shrewsbury	Shrewsbury	0.72	21	0.29	Linear site dropping down from Longden Rd to Rad Brook valley along E edge of public footpath (the 'Cinder Track'). Currently vacant site - informal scrub woodland part of extensive wooded area along valley floor. Boundaries clearly defined to W with Kingsland Grange Prep School; to E with public footpath; to S with residential property (144 Longden road) and to N with residential properties on Kennedy Rd. No road access or road frontage; pedestrian access via public footpath onto established links on Kennedy Rd or Longden rd.	Surrounded by similar parcels of wooded scrub land and School playing fields to W; and Rad Brook to N.	Not Suitable	Site not suitable for development because there is no possible access. The northern element of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is also located within a conservation area, therefore development of this site is subject to an assessment of impact on the specified asset(s). Where this shows that substantial harm or a total loss of significance of the designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a Local Wildlife Site, therefore development is subject to an assessment of impact on the locally designated site(s) within proximity of the site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a Local Wildlife Site, therefore development is subject to an assessment of impact on the locally designated site(s) within proximity of the site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded.
SHR117	Former Leoni Premises, Arlington Way, Shrewsbury	Shrewsbury	0.62	19	0.25	Within development boundary and in protected employment zone existing employment building currently in use as D2 - gym. Part of Sundorne Trade Park to E of B&Q and The Range retail stores. Boundaries clearly defined by neighbouring retail/trade and industrial units. Vehicle access and road frontage via Henley Way; pedestrian access via Henley Way and Arlington Way to established networks on Battlefield Way.	Industrial/trading Estate.	Not Suitable	The site is located within part of a protected employment site, therefore open market residential development is contrary to policy. Furthermore the site is almost entirely within flood zones 2 and/or 3, therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.	Not Suitable	The site is located within part of a protected employment site, therefore employment uses are suitable in principle. However the site is almost entirely within flood zones 2 and/or 3, therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site also contains and is within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.

SHR110	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically satisfactory highways access. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The sites availability, achievability and viability is unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However as the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically satisfactory highways access. If suitable mitigation of this identified constraint were possible, the sites development potential for other forms of employment would also depend on confirmation of its availability, achievability and viability; appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

SHR120	The Sentinel Works, Whitchurch Road, Shrewsbury	Shrewsbury	3.50	105	1.40	The site has been safeguarded for employment development and it is currently in employment use. The entirety of the site is covered by built form (buildings and hard standing).	Character to north and east is predominantly residential. Character to the south is retail (large supermarket and its car-park). Character to the west is employment/commercial.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is a protected employment site and in active use. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance loss of employment land. Brownfield land related issues. The site itself contains buildings that are likely to have historic merit. The site is also in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Currently Suitable - Subject to Further Detailed Assessment	The site is a protected employment site and in active use. The use of the site for alternative employment is suitable in principle. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site itself contains buildings that are likely to have historic merit. Brownfield land related issues. The site is also in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR121	Land off Castle Foregate, Shrewsbury	Shrewsbury	2.36	71	0.94	Within development boundary and in protected employment zone existing employment buildings currently in use as employment, rail depot and coal yard, parking and additional storage. Bounded by Shrewsbury Crewe rail line to E; Bagley Brook, timber yard, residential and Bagley social club to W; further employment land to S; and vacant rail land to N. Road access via Castle Foregate; pedestrian access via established links from Castle Foregate. No trees or hedgerows on site. Within flood zone of Bagley Brook	Employment land, railway line and associated land, new residential development on Greenfields Gardens and Bagley Social Club.	Not Suitable	Whilst the site is within the development boundary much of it is within a protected employment site. Therefore open market residential development on the site is contrary to policy. Furthermore much of the site is located within flood zones 2 and/or 3, therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.	Not Suitable	The site is located within the development boundary and much of it is a protected employment site. Therefore the site is suitable in principle for employment use. However, much of the site is located within flood zones 2 and/or 3, therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.
SHR123	Land off Pritchard Way, Shrewsbury	Shrewsbury	0.58	17	0.23	Site adjacent to roundabout at Old Potts Way and Pritchard Way. Accessed via track off Reabrook Ave but access maybe in alternative ownership, no other road frontage pedestrian access possible onto Pritchard Way. Site bounded by residential properties to SW and SE: by recreation ground to W and Old Potts Way and Pritchard Way to N and E. Site is open space and part of Reabrook Local nature Reserve, currently grassed area bounded by trees and hedgerows	Residential and other open space/recreational space	Not Suitable	The site is entirely within Reabrook Local Nature reserve. Consequently open market residential development is likely to lead to a significant adverse effect on locally designated site(s) and as such is contrary to policy. Furthermore the ability to provide an appropriate access due to the sites location adjacent to the Reabrook Roundabout is unclear and subject to highway approval. Site is within proximity of conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is entirely within Reabrook Local Nature reserve. SHR124X	Land off Long Meadow Drive	Shrewsbury	0.18	N/A	N/A						
SHR126	Land off St Michaels Street and New Park Road, Shrewsbury	Shrewsbury	0.67	20	0.27	Brownfield site in central location. Currently in use as agricultural machinery and plant hire operation including offices and storage. Site comprises steel framed storage buildings, tarmacked storage areas behind Victorian brick frontage. Site has road and pedestrian access off New Park Road and additional road frontage onto St Michaels Street. Boundaries clearly defined by neighbouring uses, surrounding area is mix of employment, commercial and residential uses.	Mix of employment, commercial and residential uses. Line of old Shrewsbury- Newport Canal on E boundary of site.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Whilst the site is located within the development boundary, the site is protected for employment. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate changes to policy and management of any physical, heritage and environmental constraints present. For instance loss of employment land. Brownfield land related issues. The site is located within conservation area and in proximity to listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Currently Suitable - Subject to Further Detailed Assessment	Site is within the development boundary and protected employment area - so suitable in principle for employment use. Suitability is subject to management of any physical, heritage and environmental constraints present. For instance loss of employment land. Brownfield land related issues. The site is located within conservation area and in proximity to listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR127	Industrial Unit, Monkmoor Trading Estate, Shrewsbury	Shrewsbury	0.91	27	0.37	Brownfield site in employment use. Not in protected employment zone but application refused and appeal dismissed for residential use in 2017. Various occupiers frontage is carpet sales and showroom. Boundaries clearly defined by surrounding property both employment, retail and residential. Site has frontage and road/pedestrian access via Monkmoor Rd and potentially via Conway.	Predominantly residential but site also adjoins protected employment site to N and retail to S.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within the development boundary. However the site has been refused at appeal (Feb 2017) for residential use to protect non-designated heritage asset and maintain existing business use. The site may have long term potential subject to appropriate management of the physical, heritage and environmental constraints present. For instance assessment/retention of non-designated heritage assets and loss of employment.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary and in use for commercial purposes. Therefore employment uses on the site are suitable in principle. Suitability is subject to appropriate management of the physical, heritage and environmental constraints present.

Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development as this would result in the loss of part of a Local Nature Reserve.	Rejected	The site availability, achievability and viability are unknown. However the site is not considered suitable for development as this would result in the loss of part of a Local Nature Reserve.
SHR124X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
SHR126	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is a protected employment site, consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical, environmental, or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically brownfield land related issues. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. Suitability of the site for employment development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
SHR127	Currently Available	The site has been the subject of either a refused or withdrawn Planning Application for a relevant use, but it is understood that there remains development interest; the site is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been the subject of either a refused or withdrawn Planning Application for an alternative use and subsequent investigations have not been able to clarify whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. SHR131	Fire Station, St Michaels Street, Shrewsbury	Shrewsbury	0.76	23	0.30	Current operational fire station and HQ. Comprising offices, accommodation, garaging, storage, training, maintenance etc. Redeveloped/refurbished in 2010/11. Road frontage onto Crewe St and St Michaels St - pedestrian and vehicle access via Crewe St. Boundaries clearly defined by surrounding streets and neighbouring properties. Shrewsbury-Crewe rail line to W.	Mixed use area - residential, retail and employment use.	Currently Suitable - Subject to Further Detailed Assessment	Brownfield site within development boundary no policy restrictions in principle. Suitability is however subject to appropriate management of any physical, heritage and environmental constraints present. For instance the suitability of the existing access to serve the redevelopment of the site would be subject to highway approval. As a brownfield site, site investigation/mitigation may be required. The site also adjoins conservation area and listed building, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset(s). The site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Currently Suitable - Subject to Further Detailed Assessment	Brownfield site within development boundary no policy restrictions in principle. Suitability is however subject to appropriate management of any physical, heritage and environmental constraints present. For instance the suitability of the existing access to serve the redevelopment of the site would be subject to highway approval. As a brownfield site, site investigation/mitigation may be required. The site also adjoins conservation area and listed building, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset(s). The site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR132	Morris Oil Works, St Michaels Street, Shrewsbury	Shrewsbury	1.88	56	0.75	Current Morris Lubricants depot and offices. 2-3 storey brick buildings within conservation area. Site also includes Plough Public House, 2x takeaways and Dentist. Boundaries completely defined and set by adjoining properties, Castle Foregate to W, New Park Road to N and Beacall's Lane to E. Road frontage onto Castle Foregate but alternative access available via New Park rd. Pedestrian access via Castle Foregate and New park road to existing established links.	Mixed use area	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within the development boundary but is protected for employment use. Therefore open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the loss of key employment land. It is a brownfield site with potential contamination. The site is in proximity of a Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site contains a listed building; is in conservation area; and within proximity of scheduled monument (Shrewsbury castle), therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. A small portion of the site is located within and the remainder of the site is in proximity of an air quality management area.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary and is protected for employment use. Therefore employment uses on the site are suitable in principle. Suitability is subject to appropriate management of any physical, heritage and environmental constraints. For instance it is a brownfield site with potential contamination. The site is in proximity of a Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. A small portion of the site is located within and the remainder of the site is in proximity of an air quality management area.
SHR134	GPO Main Sorting Office, St Michaels Street, Shrewsbury	Shrewsbury	1.78	53	0.71	Edge of town centre site currently occupied by main Post office sorting office, car park, Britannia Inn and Buttermarket night club. Sorting office 2-3 storey late C20th brick built with modern steel clad maintenance and machinery depot buildings. Buttermarket Grade 2 listed building originally at terminal of canal. Whole site has previous industrial heritage from 19th and 20th century railway uses. Boundaries clearly defined by surrounding streets and neighbouring properties; Howard St to S, Beacall's Lane to E, Castle Foregate to W and Morris Lubricants site (SHR132) to N. Vehicle access currently via Howard St, pedestrian access also via castle Foregate.	Mixed use area including employment, retail and residential - on edge of town centre.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located within the development boundary but much of the site is protected for employment use. Therefore open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the loss of key employment land. It is a brownfield site with potential contamination. The site is in proximity of a Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not currently suitable for open market residential development as it is located in protected employment land. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Accepted - Subject to Further Detailed Assessment	The site is considered available, achievable and viable. The site is also considered suitable in principle for employment development. Suitability is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

SHR140	Barnabas Church Centre, Belle Vue, Shrewsbury	Shrewsbury	0.31	9	0.13	Brownfield site currently occupied by Barnabas Church and hall with associated car parking. Boundaries clearly defined - River Severn to rear forms N boundary, Longden Rd forms S boundary, E&W boundaries with adjoining properties. Site has road frontage and vehicle access onto Longden Rd; pedestrian access via Longden Rd.	Surrounding uses are a mix of residential and commercial.	Not Suitable	Brownfield site within development boundary. However, the site is entirely located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is also located within a Conservation Area and within proximity of various listed buildings and a Scheduled Monument (Shrewsbury Abbey), therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site also contains and is within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of a Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. SHR141X	13 Underdale Road	Shrewsbury	0.05	N/A	N/A						
SHR142	Nobold Glebe, Shrewsbury	Shrewsbury	3.19	96	1.28	Large irregular site - single field in agricultural use (currently grass/silage) existing barn at southern corner of site. Outside but adjoining development boundary. Boundaries well defined by rail line to E, Longden Road to W, Washford Rd to S and residential properties (Sweetlake cottages) and Longden Rd industrial estate to N. Established hedgerow and trees along all boundaries. Road frontage onto Longden and Washford Roads location of current access not clear. Site largely flat but with slight upward slope N-S.	Mix of agricultural land to S and W - urban area to N - residential and Longden Rd business park and residential estate development to E - Meole Brace.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate changes to policy and management of any physical, heritage and environmental constraints. For instance access is limited onto Longden Road and Washford Road, suitability of any proposed access into the site is subject to highway approval. The site forms the majority of the gap between Shrewsbury and Nobold, which will require due consideration. The site is within proximity of Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site also contains and is within proximity of a number of TPO's, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. Surrounding uses include dwellings and employment units, this setting will require due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate changes to policy and management of any physical, heritage and environmental constraints. For instance access is limited onto Longden Road and Washford Road, suitability of any proposed access into the site is subject to highway approval. The site forms the majority of the gap between Shrewsbury and Nobold, which will require due consideration. The site is within proximity of Listed Buildings, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset. SHR140	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development due to its location in flood zone 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.	Rejected	The site availability, achievability and viability is unknown. However the site is not considered suitable for development due to its location in flood zone 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.
SHR141X											Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.	Rejected	This site is less than 0.2ha (and is not considered to have sufficient capacity for 5 or more dwellings/500m2 of floorspace), consequently it is below the size threshold for inclusion within this assessment.
SHR142	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. The site contains and is within proximity of a number of TPOs, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
SHR148	Land at Red Barn Lane, Shrewsbury	Shrewsbury	0.64	19	0.25	Currently vacant site - informal scrub woodland part of extensive wooded area along valley floor. Boundaries not clearly defined to W with residential property and SHR116; to W with further vacant land; to S with Red Barn pub and car park along Longden road and to N with residential properties at end of Red Barn lane. No road access or road frontage access appears to be via current pub car park; pedestrian access onto established links on Longden rd.	Similar wooded scrub land to W and E and N. Red Barn pub and car park and Longden Rd to S.	Not Suitable	The site does not have a road frontage or obvious means of access as such it is unsuitable for development. Any proposed access would be subject to highway approval. Furthermore, the site is located within a conservation area and in proximity to one or more listed buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of a Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site itself is densely wooded, the implications of any development on these trees, particularly in the context of the sites location within a conservation area will require due consideration.	Not Suitable	The site does not have a road frontage or obvious means of access as such it is unsuitable for development. Any proposed access would be subject to highway approval. Furthermore, the site is located within a conservation area and in proximity to one or more listed buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. The site itself is densely wooded, the implications of any development on these trees, particularly in the context of the sites location within a conservation area will require due consideration.
SHR149	Land adj. to A5, Nobold	Shrewsbury	10.22	307	4.09	Agricultural field and wooded area to the West of Shrewsbury and Nobold. The site is outside the Shrewsbury development boundary and separated from it by other promoted sites, but within the A5 bypass.	Agricultural	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, the site is separated from the built form of Shrewsbury by agricultural fields and the settlement of Nobold. The ability to provide an appropriate access into the site is unclear as the site fronts only onto a small rural track and the A5, which is in a cutting - any proposed access would be subject to highway approval. As a result the site is considered unsuitable for development.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is separated from the built form of Shrewsbury by agricultural fields and the settlement of Nobold. The ability to provide an appropriate access into the site is unclear as the site fronts only onto a small rural track and the A5, which is in a cutting - any proposed access would be subject to highway approval. As a result the site is considered unsuitable for development.
SHR150	Coleham Depot Redline, Shrewsbury	Shrewsbury	1.07	32	0.43	Ex-rail storage depot and maintenance operation site accessed at junction of Betton St, Belle Vue road and Old Coleham. Site contains brick built maintenance sheds and depots and external hard standing storage areas. Site has been in rail use since early 19thC. Boundaries well defined to E by rail lines and to NW by residential properties on Old Coleham; SW boundary with existing Network rail depot (SHR006) not clearly defined. Road access onto junction with Belle Vue road no road frontage as such; pedestrian access via established links.	Mixed use area, high density terraced housing, commercial uses, and rail operations.	Currently Suitable - Subject to Further Detailed Assessment	As a brownfield site within the development boundary, the site is considered suitable in principle for open market residential development. However, suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance as a brownfield site, it may be subject to contamination therefore suitable management and mitigation will be necessary. The ability to provide an appropriate and safe access into the site is subject to highway approval. The design and layout should mitigate any impact on/from the adjacent builders yard and railway line. The site is located within 250m of a Wildlife Site - River Severn, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of trees subject to TPO's therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. The site is within proximity of Belle Vue Conservation Area, Shrewsbury Abbey Scheduled Monument and numerous listed buildings, consequently development is subject to an assessment of impact on the significance of the setting of this heritage asset(s). The site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Currently Suitable - Subject to Further Detailed Assessment	As a brownfield site within the development boundary, the site is considered suitable in principle for employment development. SHR154	Land adj. to Darville, Shrewsbury	Shrewsbury	1.78	54	0.71	Site is located within development boundary adjacent to Telford Way on NE boundary and river Severn on SE boundary NW and SW boundaries with existing residential estate development and properties on Darville. Site comprises low lying fields used for grazing/silage crops with established trees on river bank and along NW boundary. Site has no direct road frontage but would be accessed via existing junction with Darville. Pedestrian access via Daville to established network also Severn Way public footpath and long distance route along river bank on E boundary.	Agricultural - grazing to S along river flood terrace and residential estate development to W.	Not Suitable	The site is not suitable for development as approximately 80% of this site is located within flood zones 2 and/or 3. Furthermore, the element of the site that is not located within flood zones 2 and/or 3 can only be accessed through elements of the site that are located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, the ability to provide an appropriate access to and into the site is subject to highway approval. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is within proximity of Local Wildlife Sites - River Severn and Sundorne Canal, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. SHR147	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is located in protected employment land; consequently open market residential development is contrary to policy. Furthermore, approximately 20% of the site is located within flood zones 2, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential, subject to confirmation of the sites availability; appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	The sites availability, achievability and viability is unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore, approximately 10% of the site is located within flood zones 2, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is however considered suitable subject to confirmation of the sites availability; appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. The sites long term potential is therefore subject to confirmation of its availability, achievability and viability.
SHR148	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. SHR157	Land south of the A5, The Day House, Nobold	Shrewsbury	42.74	1282	17.10	Large site to W of and adjacent to Shrewsbury A5 bypass forming irregular area stretching from Shrewsbury-Aberystwyth rail line to A488. Site comprises number of fields used for pasture/fodder crops with some arable. Some remnant hedgerow boundaries and established trees separating fields internally; clear boundaries with rail line and A5 bypass with established trees on the latter; remaining boundaries to E and W not clearly defined apart from short stretch along A488. Site has road frontage and potential access onto A488 by 'Two-mile Houses' approx. 250m from junction on A5 bypass. Pedestrian access very poor no existing network or footways. Site is isolated from any development by road and rail line, over 500m to nearest residential development and over 1500m to nearest facilities in Hanwood.	Agricultural land; village of Hanwood approx. 1.5km to W and edge of Shrewsbury 1 - 1.5km to E.	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, the site is not considered to have long term potential for open market residential development as it is separated from the built form of the settlement (and its development boundary) by a series of agricultural fields and the settlement of Nobold. It is also separated from the built form of the settlement by the A5 a significant physical barrier. The ability to provide an appropriate access to and into the site (including capacity of surrounding road network) is subject to highway approval. The site is within proximity of Weir Coppice Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site contains and is within proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site is not considered to have long term potential for other forms of employment development as it is separated from the built form of the settlement (and its development boundary) by a series of agricultural fields and the settlement of Nobold. It is also separated from the built form of the settlement by the A5 a significant physical barrier. The ability to provide an appropriate access to and into the site (including capacity of surrounding road network) is subject to highway approval. The site is within proximity of Weir Coppice Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR158	Land at Upper Edgebold, Shrewsbury	Shrewsbury	75.47	2264	30.19	Large irregular shaped greenfield site outside but adjacent to development boundary on W edge of Shrewsbury urban area bordered by A5 bypass on W side. Site comprises 5 agricultural fields currently used for grazing/fodder/arable crops and farmhouse/complex of Upper Edgebold. S boundary of site is with Hanwood Rd (A488) and Mount Edgebold Farm; N with SC freehold area identified as future burial facility off Mytton Oak Rd and with Ashleigh Farm; E with allocated site 'Land at Bowbrook' (SHREW030/R) and agricultural land. Site has road frontage and potential access off Hanwood Rd (A488) and potentially from A5 bypass. Site boundaries are defined by adjacent road routes and established trees/hedgerows - some scattered. Site is isolated from urban area currently but will have connection when allocated site completed.	Agricultural land and road routes.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is adjacent to trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site also contains as Grade 2 listed building - Upper Edgebold Farmhouse and is in proximity of further listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is adjacent to trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR159	Mousecroft Lane, Shrewsbury	Shrewsbury	11.76	353	4.70	Greenfield site outside but adjacent to development boundary on W edge of Shrewsbury off Radbrook estate. Site is currently in use as public open space and is also designated LWS. S portion of site was former sand and gravel quarry and elements are 'filled land' and there are a number of ponds on site associated with previous quarry use. Large amount of trees/woodland on site with established trees and hedgerows along boundaries. N portion of site is reclaimed historic landfill (Nobold Lane tip). Site boundaries are clearly defined by surrounding residential properties to N, E, and S, to W with woodland, remaining quarry buildings, SC freehold land and Conduit Head grade 2 listed building. Road frontage and highway access to Mousecroft Lane and potential access via residential streets in Radbrook estate. Site has varied topography and a number of steep slopes as a result of former uses.	Residential, open space	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, much of the site comprises an identified natural/semi-natural open space. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore, the site is a local wildlife site, consequently development is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. The site also has adverse topography, and the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within 300m of a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 30m of a Veteran Tree/ tree protected by a Tree Preservation Order. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, much of the site comprises an identified natural/semi-natural open space. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore, the site is a local wildlife site, consequently development is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. The site also has adverse topography, and the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within 300m of a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 30m of a Veteran Tree/ tree protected by a Tree Preservation Order. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
SHR160	Land at Battlefield, Shrewsbury	Shrewsbury	3.76	113	1.51	Greenfield site outside Shrewsbury's development boundary in ribbon settlement of Upper Battlefield. Agricultural site in use as rough grazing. Clear defined boundaries of established trees and hedgerows to N, S, E, and W with A49. Site has road frontage and access point onto A49, pedestrian access extremely limited but is footway/pavement along A49. to N of site is former vehicle scrap yard no longer in use and site also borders area of designated ancient woodland.	Agricultural, to E, S, W, single residential property also to S. Former scrap yard to N.	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, the site is separated from the development boundary and the built form of the settlement by agricultural land.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is not considered to have long term potential for other forms of employment as it is separated from the development boundary and the built form of the settlement by agricultural land.

SHR157	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viable	The site has been submitted through the 'call for sites' for a relevant use, for a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not considered suitable for development due to its isolation and separation from the built form of the settlement by the A5.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not considered suitable for development due to its isolation and separation from the built form of the settlement by the A5.
SHR158	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include potential highway constraints.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. As the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include potential highway constraints.
SHR159	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. SHR161	Land at Bowbrook, Shrewsbury	Shrewsbury	8.49	255	3.40	Greenfield site outside development boundary in SC ownership currently in agricultural use. Site comprises 2 fields in use for grazing/fodder crops larger of which is to S divided by established hedgerow. Site contains no. of established trees. Boundaries are clearly defined by established field boundaries and trees/hedgerows. Site has road frontage and access onto Mytton Oak Rd; pedestrian and cycle access also via Mytton Oak Rd. Site not currently well related to urban area.	Agriculture, and residential properties.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance it is understood that the site has a high water table, this will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval. The site also contains and is in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance it is understood that the site has a high water table, this will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval. The site also contains and is in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
SHR162	Land north of Holyhead Road, Shrewsbury	Shrewsbury	17.24	517	6.90	Greenfield site outside but adjacent to development boundary. Site comprises 7 separate field units currently in agricultural use for arable/fodder crops with no of scattered established trees esp. along Featherbed Lane. Site boundaries are clearly set by Holyhead Rd to W; Udlington Farm, woodland and Shelton Rough LWS to N; to E by Shelton Rough LWS; and S by further agricultural land. Boundaries clearly defined on the whole by trees and established hedgerows. Site is bisected by Featherbed Lane - access track to LWS and part of Severn Way long distance path. Site has road frontage with Holyhead Rd and existing access off Holyhead Rd to LWS via Featherbed Lane track. Pedestrian and cycle access via Holyhead Rd to established network. Site is largely flat site with slight fall W-E towards river Severn.	Largely agricultural land and woodland but also adjacent Udlington Farm complex and buildings, and opposite Severn Hospice and Uplands care facility.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the Severn Way runs through the site, this route needs to be protected and may have implications for the layout of development. The ability to provide an appropriate access to and into the site is subject to highway approval. The sites relationship to the existing built form of the settlement will require due consideration. The site is in proximity of a Registered Parkland and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also adjacent to Shelton Rough Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the Severn Way runs through the site, this will need to be retained/re-routed within the site. The proposed route of the NWRR runs through the site, this route needs to be protected and may have implications for the layout of development. The ability to provide an appropriate access to and into the site is subject to highway approval. The sites relationship to the existing built form of the settlement will require due consideration. The site is in proximity of a Registered Parkland and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also adjacent to Shelton Rough Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
SHR163	Cross Hill Farm, Shrewsbury	Shrewsbury	22.91	687	9.16	Irregularly shaped parcel consisting of several agricultural fields to the north of Shrewsbury (west of Ellesmere Road).	Character to the North and West is agricultural. Character to the East is residential. Character to the South is a mixture of agricultural and residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. Therefore open market residential development is contrary to policy. Furthermore, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. If this highway constraint can be addressed, the site may have long term potential for open market residential development, subject to appropriate policy changes and management of any other physical; heritage; or environmental constraints present. For instance, this site is adjacent to a Natura 2000 site, consequently, development is subject to an appropriate assessment under the Habitats Regulations and buffering is likely to be required. The proposed route of the NWRR runs through the site, this route needs to be protected and may have implications for the layout of development. The site contains and is in proximity of a number of veteran trees and trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Additionally the site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. If this highway constraint can be addressed, the site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any other physical; heritage; or environmental constraints present. For instance, this site is adjacent to a Natura 2000 site, consequently, development is subject to an appropriate assessment under the Habitats Regulations and buffering is likely to be required. The proposed route of the NWRR runs through the site, this route needs to be protected and may have implications for the layout of development. The site contains and is in proximity of a number of veteran trees and trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Additionally the site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.
SHR164	Land at Emstrey, south east of Shrewsbury	Shrewsbury	2.94	88	1.17	Greenfield site outside development boundary. Site currently in agricultural use for grazing/fodder crops. Site boundaries clearly defined to S by B4380; to N by River Severn; to E by Emstrey Farm and residential conversions but W boundary with adjacent field is arbitrary field boundary and not well defined. Site has road frontage and existing access from B4380. Pedestrian and cycle access via B4380 to established network. Site not well related to urban form of Shrewsbury and would form isolated parcel of new development in the open countryside.	River Severn, agricultural land, farm complex and residential conversions, caravan sales and caravan site.	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore the site is not considered to have long term potential as it is separated from the development boundary by agricultural fields/the Salop Leisure site and the A5 which is a significant physical barrier. Additionally, approximately 10% of the site is located in flood zone 2 (on northern edge), therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is also adjacent to the River Severn Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of a grade 2 listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site is not considered to have long term potential for other forms of employment as it is separated from the development boundary by agricultural fields/the Salop Leisure site and the A5 which is a significant physical barrier. Additionally, approximately 10% of the site is located in flood zone 2 (on northern edge), therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include proximity to heritage and environmental assets; implications for the Severn Way; relationship to the proposed NWRR; and other highway considerations.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Furthermore as the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include proximity to heritage and environmental assets; implications for the Severn Way; relationship to the proposed NWRR; and other highway considerations.
SHR163	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purposes of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered likely to become available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. The site is also adjacent to a Natura 2000 site. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. However as the site is located adjacent to but outside the development boundary, suitable employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically given the known highway constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. The site is also adjacent to a Natura 2000 site. If suitable mitigation of this identified constraint were possible, the sites development potential for other forms of employment would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
SHR164	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. SHR165	Land to north-west of Hazeldine Way, Shrewsbury	Shrewsbury	0.77	23	0.31	Greenfield site within development boundary. Boundaries clearly set by Rea Brook, Shrewsbury-Hereford rail line, Hazeldine Way and PPG17 open space all boundaries defined by established trees/woodland and hedgerows. Site has road frontage to Hazeldine Way but no access. Pedestrian and cycle access via Hazeldine Way to established links.	Woodland, open space and residential	Currently Suitable - Subject to Further Detailed Assessment	Greenfield site within development boundary, so no in principle restrictions. However, approximately 66% of the site is located within flood zone 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may be suitable for development subject to confirmation of the ability to provide an appropriate access to and into the site (which is currently unclear), any proposed access is subject to highway approval. Suitability is also subject to appropriate management of any physical, heritage and environmental constraints present. For instance, the site is adjacent to Reabrook Valley Local Nature Reserve, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Currently Suitable - Subject to Further Detailed Assessment	Greenfield site within development boundary, so no in principle restrictions. SHR166	Land to the east of Shrewsbury - to the north of the railway line; west of the A49; and east and south of the river severn.	Shrewsbury	43.28	1298	17.31	Large greenfield site outside development boundary E of River Severn bounded by river to E and N, A49 bypass to W and Shrewsbury-Wolverhampton rail line to S. Site is landlocked but has boundary with A49 bypass nor is their current access. Pedestrian and cycle access not currently possible. Site boundaries defined by hedgerows /trees with A49 bypass and railway. Site boundary on W is arbitrary line drawn to avoid flood zone although element of site is still within zones 2 and/or 3. Site is separated from urban area by river and has not well related to existing settlement.	Agricultural land and riparian zone.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, a small portion of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of the settlement and the services and facilities within it by the River Severn, a significant physical barrier which will require due consideration, particularly for open market residential development. The sites only road frontage is onto the A49 and there are currently no junctions that would serve development of this site, therefore the ability to provide an appropriate access to and into the site is unclear and any proposed access would be subject to highway approval. The site is proximity to Local Wildlife Sites - River Severn and Monkmoor Pool, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also a significant area of best and most versatile agricultural land - Grade 2, which will require due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, a small portion of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. The site is also a significant area of best and most versatile agricultural land - Grade 2, which will require due consideration.
SHR167	Land off Shelton Lane, north of Mountwood Park, Shrewsbury	Shrewsbury	0.52	15	0.21	Small greenfield site outside but adjacent to development boundary between urban form and River Severn off Shelton Lane. Site is bounded by Shelton La/Severn Way to S, and scrub woodland to N, E and W. Site contains number of established mature trees and on boundaries. Site is accessed by Shelton Lane/Severn Way but is currently not suitable for vehicles at this point. Pedestrian and cycle access also via Shelton Lane/Severn Way.	Residential and scrub woodland.	Not Suitable	The site is located adjacent to but outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, a small portion of the site (on its northern boundary) is located within flood zone 2, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the site does not have a road frontage (Shelton Lane in this location is a narrow track). The ability to provide an appropriate access to and into the site is therefore unclear and any proposal would be subject to highway approval. As such the site is unsuitable for development.	Not Suitable	The site is located adjacent to but outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, a small portion of the site (on its northern boundary) is located within flood zone 2, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the site does not have a road frontage (Shelton Lane in this location is a narrow track). The ability to provide an appropriate access to and into the site is therefore unclear and any proposal would be subject to highway approval. As such the site is unsuitable for development.
SHR168	Land off Corporation Lane, Coton Hill, Shrewsbury	Shrewsbury	1.12	33	0.45	Linear mostly greenfield site mostly outside but with S portion inside development boundary. Boundaries set by Corporation Lane to W, recent new development to S, Shrewsbury-Chester rail line to W and woodland to N, E and W boundaries defined by trees/hedgerows; S boundary with residential properties. Road frontage and vehicle, cycle and pedestrian access via Nursery Meadows or Corporation Lane.	Residential, agricultural and open space	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site largely located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and the management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. The site is in proximity to Grade 2 a Listed Building - Ice House at Coton Hill Farm, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site largely located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and the management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. The site is in proximity to Grade 2 a Listed Building - Ice House at Coton Hill Farm, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. Surrounding character is a mix of residential and countryside, the employment uses proposed would need to reflect this context (it is likely to be office based employment that is appropriate).

Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. As the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. However, a small portion of the site (on its northern boundary) is located within flood zone 2, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the site does not have a road frontage (Shelton Lane in this location is a narrow track). The ability to provide an appropriate access to and into the site is therefore unclear and any proposal would be subject to highway approval. As such the site is unsuitable for development.
SHR168	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However as the site in the majority is not currently suitable for development as it is largely located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However as the site is in the majority located in open countryside, consequently employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.

SHR169	Land off Berwick Road, Shrewsbury	Shrewsbury	0.98	29	0.39	Greenfield site outside but adjacent to development boundary on NE edge of urban area. Site is bounded by Berwick Rd to W residential properties to S and agricultural land to N and E. Site is currently in agricultural use for arable/fodder crops. Site has road frontage to Berwick Rd and vehicle/pedestrian/cycle access via Roundhill Lane. Site has some established trees and hedgerows present esp. on W and S boundaries.	Agricultural land, residential and woodland.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, approximately 33% of the site is located within Flood Zone 2, this area of the site will only be considered to have development potential if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate and safe access into the site is subject to highway and environment agency approval. Due to constraints to the site its capacity is likely to be limited. The site is located within proximity of a Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a tree subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site is located within proximity of a Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within proximity of a tree subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. Surrounding character is a mix of residential and countryside, the employment uses proposed would need to reflect this context (it is likely to be office based employment that is appropriate).
SHR170	Land off Shelton Lane, north of Dalton Drive, Shrewsbury	Shrewsbury	0.65	20	0.26	Small greenfield site outside but adjacent to development boundary between urban form and River Severn off Shelton Lane. Site is bounded by Shelton La/Severn Way to S, and scrub woodland to N, E and W. Site contains number of established mature trees and on boundaries. Site is accessed by Shelton Lane/Severn Way but is currently not suitable for vehicles at this point. Pedestrian and cycle access also via Shelton Lane/Severn Way.	Residential and scrub woodland.	Not Suitable	The site is located adjacent to but outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, a small portion of the site (north eastern corner) is located within flood zone 2, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the site does not have a road frontage (Shelton Lane in this location is a narrow track). The ability to provide an appropriate access to and into the site is therefore unclear and any proposal would be subject to highway approval. As such the site is unsuitable for development. The ability to provide an appropriate access to and into the site is therefore unclear and any proposal would be subject to highway approval. As such the site is unsuitable for other forms of employment development.
SHR171	Land at Bow Bridge House, Off Mytton Oak Road, Shrewsbury	Shrewsbury	1.05	31	0.42	Greenfield site outside but adjacent to development boundary on W edge of Shrewsbury. Site has road frontage with Mytton Oak Rd and has road access via lane to Ley Grange. Pedestrian and cycle access via Mytton Oak Rd to established network. Site is bounded by Mytton Oak Rd to N and access lane to W; allocated housing site SHREW210 to E and agricultural land to S. Site boundaries are defined by established trees and hedgerows to N and E and Bow Brook to E; W with access lane and existing property; S by fence with adjacent agricultural land. Site also contains existing Bow Bridge House and number of existing outbuildings and small pond on E boundary	Agricultural, residential and allotments to W.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is adjacent to a residential development site, this context will need to be reflected in the design, layout and types of employment that would be considered appropriate.
SHR172	Rear of Abbey Car Park, Shrewsbury - CONFIDENTIAL SITE	Shrewsbury	0.69	21	0.28	Brownfield site within development boundary. Currently rear area of surfaced car park - car park as a whole has frontage and vehicular access off Abbey Foregate however site itself does not have frontage or access. Site also includes element of scrub land comprised trees/shrubs. Site is bounded by mix of uses including retail to S residential to E and W and car park to N. Boundaries are clearly defined by neighbouring properties.	Mixed use.	Not Suitable	The site is not currently suitable for development as 100% of this site is located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is also within 300m of Shrewsbury Abbey Scheduled Monument; Grade 1, 2 and 2* Listed Buildings and within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of the River Severn Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. There is also potential contamination from current and previous uses.	Not Suitable	The site is not currently suitable for development as 100% of this site is located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
SHR173	Land west of Ellesmere Road, Shrewsbury	Shrewsbury	23.30	699	9.32	Greenfield site outside but adjacent to development boundary between urban form and Shrewsbury - Chester rail line. Site currently in agricultural use for grazing/fodder/arable crops in 5 distinct fields including Hencote Farm and associated buildings in NE corner of site. Site is bounded by rail line to W, Ellesmere Rd to E, Old River Bed LWS to N and residential to S. Boundaries are defined by neighbouring properties and trees hedgerows to N, E and W. Site has road frontage and vehicle access from Ellesmere Rd. Pedestrian and cycle access also via Ellesmere Rd. Likely to be number of established trees and hedgerows within site.	Character to the north and west is primarily agricultural. Character to the east is predominantly residential. Character to the south is a mix of residential/ongoing residential development and other land.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. Therefore open market residential development is contrary to policy. Furthermore, a small portion of the site contains a local wildlife site, consequently development on this portion of the site and an appropriate buffer is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. A similar portion of the site is also located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. If this highway constraint can be addressed, the remainder of the site may have long term potential for open market residential development, subject to appropriate policy changes and management of any other physical, heritage, or environmental constraints present. For instance, this site is within 1km of a Natura 2000 site, consequently, development is subject to an appropriate assessment under the Habitats Regulations. The site contains and is in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Additionally the site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, a small portion of the site contains a local wildlife site, consequently development on this portion of the site and an appropriate buffer is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. A similar portion of the site is also located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. If this highway constraint can be addressed, the remainder of the site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any other physical, heritage, or environmental constraints present. For instance, this site is within 1km of a Natura 2000 site, consequently, development is subject to an appropriate assessment under the Habitats Regulations. The site contains and is in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Additionally the site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. The character of the built form of the area is primarily residential, this will need to be considered when determining the type and layout of any employment development on the site.
SHR174	Land West of Ellesmere Road, Shrewsbury	Shrewsbury	93.21	2796	37.29	Large site consisting of a number of agricultural fields; the Hencott Wood/Pool wildlife site; and Crosshill Farm to the north of Shrewsbury - west of Ellesmere Road.	Character to the north and west is agricultural. Character to the south is primarily agricultural and residential. Character to the east is primarily residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. Therefore open market residential development is contrary to policy. Furthermore the site contains the Hencott Wood/Pool Ramsar; SSSI; and local wildlife site, which is an important environmental asset and as such is not suitable for development now or in the future as any development is likely to have an adverse effect on the site and as such is contrary to national and international legislation, a significant buffer and mitigation is also likely to be necessary if development on the wider site was considered appropriate in the future, as informed by an appropriate assessment under the Habitats Regulations. A small portion of the site is located in flood zone 2 (Hencott Wood/Pool); therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Finally, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. Subject to the management of the highway constraint, the element of the site outside the Ramsar/SSSI/local wildlife site and an appropriate buffer; and outside flood zone 2, may have long term potential for open market residential development, subject to appropriate policy changes and management of any other physical, heritage, or environmental constraints. For instance, the site contains and is in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Additionally the site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. Given the size of the site, it is likely that the provision of a range of services and facilities would need to represent an intrinsic element of the scheme.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site contains the Hencott Wood/Pool Ramsar; SSSI; and local wildlife site, which is an important environmental asset and as such is not suitable for development now or in the future as any development is likely to have an adverse effect on the site and as such is contrary to national and international legislation, a significant buffer and mitigation is also likely to be necessary if development on the wider site was considered appropriate in the future, as informed by an appropriate assessment under the Habitats Regulations. A small portion of the site is located in flood zone 2 (Hencott Wood/Pool); therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Finally, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. Subject to the management of the highway constraint, the element of the site outside the Ramsar/SSSI/local wildlife site and an appropriate buffer; and outside flood zone 2, may have long term potential for other forms of employment development, subject to appropriate changes to policies and appropriate management of any other physical, heritage, or environmental constraints. For instance, the site contains and is in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Additionally the site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. Given the size of the site, it is likely that the provision of a range of services and facilities would need to represent an intrinsic element of the scheme.
SHR175	Land south of Abbey Wharf, Shrewsbury	Shrewsbury	2.30	69	0.92	The site consists of natural/semi-natural open space. The entire site within both flood zone 2 and/or 3.	Character to the north is a mix of residential and commercial. Character to the south and east is also typified by further natural/semi-natural open space.	Not Suitable	Greenfield site within development boundary. However, the site comprises an identified natural/semi-natural open space. Development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore, the site is located within flood zones 2 and/or 3. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore, the site is within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is in proximity to a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The ability to provide an appropriate access is subject to highway approval.	Not Suitable	Greenfield site within development boundary. However, the site comprises an identified natural/semi-natural open space. Development on the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The ability to provide an appropriate access is subject to highway approval.
SHR176	North of Preston Street, Shrewsbury	Shrewsbury	29.42	883	11.77	Large greenfield site outside but adjacent to development boundary on E edge of Shrewsbury between built form and River Severn. Currently in agricultural use for arable/fodder crops and also contains Weir Hill farm and associated buildings and small site of mobile homes. Site does not have clear road frontage but has junction with and access via Preston Street. Cycle and pedestrian access also via Preston Street to established network. Boundaries with established residential to W; river Severn to E; Shrewsbury - Wolverhampton rail line to N; Robertsford Cottages and access track and further agricultural land to S. Boundaries are clearly defined and also defined by established trees and hedgerows in parts especially in N and S. Site is bordered by existing residential land and allocated site SHREW027 to S so would be well related to settlement and extend built form to river.	Agricultural and residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Approximately 50% of the site is an identified natural/semi-natural open space. Development on this element of the site and an appropriate buffer of the asset, is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore, the site also contains a RIG, consequently, development on this element of the site is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. The remainder of the site may have long term potential, subject to appropriate policy changes and management of any other physical, heritage and environmental constraints. For instance consultation with the Highway authority will be required to establish whether a satisfactory access to and into the site can be established. The site is within 250m of a River Severn Wildlife Site so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site contains a Veteran Tree/tree protected by a Tree Preservation Order. Development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. SHR173	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered likely to become available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, a small portion of the site contains a local wildlife site, consequently development on this portion of the site and an appropriate buffer is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. A similar portion of the site is also located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. The site is also in proximity of a Natura 2000 site. If suitable mitigation of this identified constraint were possible, the development potential of the area of the site that does not contain the Local Wildlife Site (and an appropriate buffer) or that located within flood zones 2 and/or 3, would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However, the site is located in open countryside, consequently suitable employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, a small portion of the site contains a local wildlife site, consequently development on this portion of the site and an appropriate buffer is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. A similar portion of the site is also located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. The site is also in proximity of a Natura 2000 site. If suitable mitigation of this identified constraint were possible, the development potential, for other forms of employment, of the area of the site that does not contain the Local Wildlife Site (and an appropriate buffer) or that located within flood zones 2 and/or 3, would also depend on confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
SHR174	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. SHR177	Oak Farm, Gains Park, Shrewsbury	Shrewsbury	2.45	73	0.98	Mixed use site outside but adjacent to development boundary on W edge of settlement. Site currently comprises Oak farm, associated buildings and area of agricultural land in use for grazing and fodder crops. Site has road frontage and access to Gains Park Way; cycle and pedestrian access to established networks also from Gains Park Way. Site boundaries are Gains Park Way to E; agricultural land to W and S (SLAA site SHR057) and Bow Brook to N. Site boundaries are clearly defined to E and N by roads, Bow Brook, and residential; to W by existing field boundaries of hedgerows and trees; however S boundary is arbitrary line across existing field. Site would be well related to existing built form.	Agricultural and residential	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, approximately 22% of site is located in flood zones 2 and/or 3 and the remainder of the site could only be accessed through flood zone. Therefore, the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Alternatively the elements of the site not located within flood zones 2 and/or 3 could come forward as part of a wider strategic development if an alternative point of access were provided.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 22% of site is located in flood zones 2 and/or 3 and the remainder of the site could only be accessed through flood zone. Therefore, the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Alternatively the elements of the site not located within flood zones 2 and/or 3 could come forward as part of a wider strategic development if an alternative point of access were provided.
SHR178	Reman Services Sports and Social Club off Albert Road, Shrewsbury	Shrewsbury	2.06	62	0.83	Reman Services Sports and Social Club. Currently comprises social club and entertainment venue, associated parking, bowling green, cricket pitch and associated pavilion and changing and practice facilities.	Residential	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shrewsbury development boundary. However, two elements of the site (totalling approximately 80% of the site) comprises an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site is suitable for development subject to management of any physical, heritage and environmental constraints present. For instance the site is in proximity of a Local Wildlife Site, development is therefore subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site also contains a Veteran Tree/tree protected by a Tree Preservation Order, development is therefore subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Listed Building so development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the Shrewsbury development boundary. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
SHR179	West of Cedars Drive, Ellesmere Road, Shrewsbury	Shrewsbury	13.52	406	5.41	Greenfield site outside but adjacent to development boundary between urban form and Shrewsbury - Chester rail line. Site currently in agricultural use for grazing/fodder/arable crops. Site is bounded by agricultural land to W, N and S. Ellesmere Rd to E. Boundaries are defined by neighbouring properties and trees hedgerows to N, E and W. Site has road frontage and vehicle access from Ellesmere Rd. Pedestrian and cycle access also via Ellesmere Rd. Likely to be number of established trees and hedgerows within site.	Agricultural and residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. Therefore open market residential development is contrary to policy. Furthermore, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. If this highway constraint can be addressed, the site may have long term potential for open market residential development, subject to appropriate policy changes and management of any other physical; heritage; or environmental constraints present. For instance, the site is in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Additionally the site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. If this highway constraint can be addressed, the site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any other physical; heritage; or environmental constraints present. For instance, the site is in proximity of a number of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Additionally the site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs. The character of the built form of the area is primarily residential, this will need to be considered when determining the type and layout of any employment development on the site.
SHR180	Land off Cedars Drive, Shrewsbury	Shrewsbury	1.40	42	0.56	Small greenfield parcel also part of SHR179 and SHR173. Currently in agricultural use for grazing/fodder crops. Access via Cedars Drive but no road frontage. Agricultural land to N, S and W residential properties on Cedars Drive to E. Boundaries defined by trees and hedgerows to N, S and W.	Agricultural and residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. Therefore open market residential development is contrary to policy. Furthermore, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. SHR177	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. Furthermore, approximately 22% of site is located in flood zones 2 and/or 3 and the remainder of the site could only be accessed through flood zone. Therefore, the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. As the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 22% of site is located in flood zones 2 and/or 3 and the remainder of the site could only be accessed through flood zone. Therefore, the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere.
SHR178	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. SHR181	Land south west of Ellesmere Road Roundabout, Shrewsbury	Shrewsbury	42.45	1273	16.98	Large greenfield site outside but adjacent to development boundary on W edge of settlement. Flat site currently in use for arable/fodder crops. Bounded to N by Huffley La and site SHR174 to W by further agricultural land; to S by Hencott Pool SSSI and RAMSAR site and further agricultural land; to E by Ellesmere Rd and then residential development. Boundaries defined to N and E by road network and to W and S by field boundaries consisting established trees and hedgerows. Site also contains mature trees and hedgerows and small pond in NW corner. Site has road frontage and vehicle access to both Ellesmere Rd and Huffley La. Cycle and pedestrian access via both roads to existing established network.	Agricultural and residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. Therefore open market residential development is contrary to policy. Furthermore, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. If this highway constraint can be addressed, the site may have long term potential for open market residential development, subject to appropriate policy changes and management of any other physical; heritage; or environmental constraints present. For instance, this site is adjacent to a Natura 2000 site, consequently, development is subject to an appropriate assessment under the Habitats Regulations and buffering is likely to be required. The proposed route of the NWRR runs through the site, this route needs to be protected and may have implications for the layout of development. The site contains and is in proximity of a number of veteran trees and trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Additionally the site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. If this highway constraint can be addressed, the site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any other physical; heritage; or environmental constraints present. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.
SHR182	Land north of the A5 bypass and south of Pulley Lane, Shrewsbury	Shrewsbury	3.62	108	1.45	Greenfield site outside but adjacent to development boundary on S edge of settlement between Pulley La and A5 bypass. Currently in agricultural use for arable/fodder crops. Site boundaries set by road network to N, E and S; and with residential properties of Pulley Lane cottages to W. Boundaries defined by trees and hedgerows. Largely flat site with road frontage and access off Pulley La cycle and pedestrian access also from Pulley Lane to existing established network.	Agricultural and residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. The site is located within and forms part of the Green Gap between Shrewsbury and Bayston Hill - retention of this Green Gap is an important policy principle will require significant consideration. The site is also in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is adjacent to the A5 and A5112 (Hereford Road), this context may have implications for the design and layout of development in order to ensure the amenity of any proposed development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This context may have implications for the design and layout of development in order to ensure the amenity of any proposed development.
SHR183	East of Red Barn Lane, off Longden Road, Shrewsbury	Shrewsbury	1.38	41	0.55	Greenfield site within development boundary accessed via Red Barn Lane off Longden Rd, though no road frontage as such. Currently vacant site - informal grassland and some woodland part of extensive wooded area along valley floor. Site boundaries with Rad Brook to N with similar grassland wooded area to E and residential properties on Longden Rd and Red Barn La to S and W. Boundaries defined by mature trees and hedgerows on all sides. No portion of site contains flood zones of Rea Brook.	Residential and grassland/woodland in private ownership.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Approximately 10% of the site (along its northern boundary) is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The suitability of the remainder of the site is dependent on whether an appropriate highway access can be provided, which will require significant consideration and is subject to highway approval. Suitability is also subject to suitable management of any other physical, heritage and environmental constraints present. For instance, the site is also within proximity of the Longden Road - Cemetery, Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also located within a conservation area and in proximity to one or more listed buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Approximately 10% of the site (along its northern boundary) is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is also located within a conservation area and in proximity to one or more listed buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of the designated heritage asset is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is in a predominantly residential area, this context will need to be considered within the type (which may be limited to office based employment), design and layout of development.
SHR184x	Underdale Rd	Shrewsbury	0.01	N/A	N/A						
SHR185	Land north of Dobbie's Garden Centre, Shrewsbury	Shrewsbury	2.20	66	0.88	Greenfield site outside but adjacent to development boundary on S edge of settlement between Pulley La and A5 bypass. Currently in agricultural use for arable/fodder crops. Site boundaries set by road network to E and S; agricultural land (remainder of field) to N; and with residential properties of Pulley Lane cottages to W. Boundaries defined by trees and hedgerows. Largely flat site with access off Pulley La cottages access road cycle and pedestrian access also from Pulley Lane cottages access road to existing established network.	Agricultural and residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. The site is located within and forms part of the Green Gap between Shrewsbury and Bayston Hill - retention of this Green Gap is an important policy principle will require significant consideration. The site is also in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is adjacent to the A5 and A5112 (Hereford Road), this context may have implications for the design and layout of development in order to ensure the amenity of any proposed development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. The site is located within and forms part of the Green Gap between Shrewsbury and Bayston Hill - retention of this Green Gap is an important policy principle will require significant consideration. The site is also in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is adjacent to the A5 and A5112 (Hereford Road), this context may have implications for the design and layout of development in order to ensure the amenity of any proposed development.

SHR181	Not Currently Available - Likely to become so	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is not currently available but will become so in the future; that there is a willing landowner/developer; and no legal or ownership problems which could limit development beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered likely to become available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. The site is also adjacent to a Natura 2000 site. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. However as the site is located adjacent to but outside the development boundary, suitable employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically given the known highway constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. The site is also adjacent to a Natura 2000 site. If suitable mitigation of this identified constraint were possible, the sites development potential for other forms of employment would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

SHR187	Land south of Hanwood Road, Shrewsbury	Shrewsbury	12.29	369	4.92	Greenfield site outside development boundary to W of Shrewsbury. Currently sub-divided into 3 distinct fields each in agricultural use for pasture/grazing. Site is bounded by Hanwood Rd to N and further agricultural use to S, E, and W. Road frontage and access to Hanwood Rd. No pedestrian access; cycle access via Hanwood Rd to existing network. Boundaries are comprised in part by trees and hedgerows with some additional fencing esp. on W and S, also internal boundaries of established trees and hedgerows. Pond on S portion of site.	Agricultural land	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, the site is separated from the built form of the settlement by an agricultural field. As a result the site in isolation is considered unsuitable for development. However, the site may have long term potential as part of a strategic release in this location, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is separated from the built form of the settlement by an agricultural field. As a result the site in isolation is considered unsuitable for other forms of employment development. However, the site may have long term potential for other forms of employment development as part of a strategic release in this location, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval.
SHR188	West of Longdon Road and South of Nobold	Shrewsbury	0.80	24	0.32	Small greenfield site outside development boundary to W of Shrewsbury and to N of Shrewsbury - Aberystwyth rail line and Longden Rd. Site is currently in agricultural use as grazing/pasture. Site is bounded by rail line and Hanwood Rd to S and E; by residential properties in Nobold to N; and agricultural land to W. Boundaries are clearly defined by trees and hedgerows. Site has road frontage and vehicular access from Longden Rd. There are no pedestrian links, cycle access via Longden Rd to existing network.	Agricultural and residential	Not Suitable	The site is distant from the settlement of Shrewsbury, being more closely associated with the rural settlement of Nobold classified as countryside. Consequently, open market residential development on the site is currently contrary to Local Pan policy. Due to this rural location and its separation from the settlement of Shrewsbury it is not considered to have long term potential for development. Furthermore, the ability to provide an appropriate access to and into the site is subject to Highways Approval. Long Term Potential - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. However, the site is located in open countryside, consequently suitable employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment development, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
SHR187	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. Furthermore, the site is separated from the built form of Shrewsbury by agricultural fields. However, the site may have long term potential as part of a strategic release in this location, subject to appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. As the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. However, the site is separated from the built form of Shrewsbury by agricultural fields therefore the site in isolation is considered unsuitable for other forms of employment development. However, the site may have long term potential as part of a strategic release in this location, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
SHR188	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
SHR190	Land west of Nobold	Shrewsbury	36.98	1110	14.79	Large greenfield site outside development boundary to W of Shrewsbury. Currently in agricultural use for grazing/pasture. Site is surrounded by further agricultural land and has boundaries with residential properties in Nobold on SE corner. Site boundaries defined mixture by hedges, trees and fencing. Site has limited road frontage with Nobold La in SE corner and access from surfaced track to Day House farm. No pedestrian access; cycle links via Nobold La to existing network.	Agricultural	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, the site is separated from the built form of Shrewsbury by agricultural fields and the settlement of Nobold. As such it is unsuitable for development.	Not Suitable	The site is located outside the development boundary within the open countryside. As employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the site is separated from the built form of Shrewsbury by agricultural fields and the settlement of Nobold. As such it is unsuitable for development.
SHR191	Coppice Court, Nobold	Shrewsbury	0.26	8	0.10	Small mixed use site outside development boundary to W of Shrewsbury in Nobold. Site comprises residential property of Coppice Court, associated outbuildings and garden area. Site is bounded to N and E by residential properties and to S and W by further agricultural land. Boundaries defined on all sides by established trees and hedgerows. Site has limited road frontage and access to Longden Rd. No pedestrian access; cycle access via Longden Rd to existing network.	Agricultural and residential	Not Suitable	The site is distant from the settlement of Shrewsbury, being more closely associated with the rural settlement of Nobold classified as countryside. Consequently, open market residential development on the site is currently contrary to Local Plan policy. Due to this rural location and its separation from the settlement of Shrewsbury it is not considered to have long term potential for development. Furthermore, the ability to provide an appropriate access to and into the site is subject to Highways Approval.	Not Suitable	The site is distant from the settlement of Shrewsbury, being more closely associated with the rural settlement of Nobold - classified as countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, due to this rural location and its separation from the settlement of Shrewsbury it is not considered to have long term potential for other forms of employment development. Furthermore, the ability to provide an appropriate access to and into the site is subject to Highways Approval.
SHR192	Day House Farm, North of A5, south west of Shrewsbury	Shrewsbury	34.76	1043	13.91	Large greenfield site to W of Shrewsbury outside development boundary. Site currently in agricultural use for grazing/ pasture and fodder crops. Site includes current Day House farm complex and associated buildings. Site is bounded by A5 bypass to W, Newton Farm and farmland to N and further agricultural land to E and S. Site boundaries are not always clearly defined but mixture of hedgerows, trees and fences. Site has road frontage to A5 bypass but otherwise none other and is accessed via surfaced track from Nobold Lane. No pedestrian access; cycle access via Nobold La to existing network.	Agricultural land	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, the site is remote from the built form of Shrewsbury, being separated from it by a number of agricultural fields.	Not Suitable	Site is in countryside for policy purposes so not suitable. If policy position changes, detailed consultation with highway authority required concerning capacity and suitability of Nobold La, Longden Rd and junctions for additional traffic. The site is within 300m Grade 2 listed building development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
SHR193	Land adjacent to the Livestock Market, Shrewsbury CONFIDENTIAL	Shrewsbury	2.33	70	0.93	Greenfield site outside development boundary adjacent to existing livestock market and services at Battlefield roundabout. Site is currently in agricultural use for grazing. Site has road frontage and vehicular access to A49 and is also accessed from rear of livestock market. No pedestrian links; cycle links via A49/A53 to existing network. Site bounded by A49 to W; Calder's House residential property to N; livestock market and commercial services to S; further agricultural land to E. N, E, and S boundaries defined by hedgerows and mature trees; W boundary comprised scrub hedge and fencing.	Mixed. Single residential property to N further agricultural land to W and E and livestock market, offices, retail and pub/hotel to S.	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, the site is separated from the development boundary by a livestock market and the A49/A53.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, due to the sites association with the adjacent livestock market/employment site, it may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the site is separated from the development boundary by a livestock market and the A49/A53, only employment which suits this setting could be considered. The site is in proximity of Ancient Woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a registered battlefield, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.

SHR194	North of the A5, north west of Pulley Lane, Shrewsbury	Shrewsbury	13.21	396	5.29	Large greenfield site outside development boundary to S of Shrewsbury. Site is adjacent to Shrewsbury built form but not development boundary due to Bestune Way exceptions site to E. Site lies in gap between Shrewsbury and Bayston Hill bounded by A5 bypass and Pulley La to S; Rea Brook and flood zone to N and W; Bestune Way affordable exceptions site to E. Site boundaries are defined by established trees and hedgerows on all sides. Site has road frontage and vehicle access off Pulley Lane. Pedestrian and cycle links and access via Pulley Lane to existing networks. Site was considered by Inspector of 14/05655/OUT to lie in the "gap of undeveloped land between Bayston Hill and Meole Brace" SAMDev policy S16.2(ii)	Character to the south and west is predominantly agricultural. Character to the north and east is a mix of residential and agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, approximately 20% of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. However, the remainder of the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. The site is located within and forms part of the Green Gap between Shrewsbury and Bayston Hill - retention of this Green Gap is an important policy principle will require significant consideration. The site is in proximity of Rea Brook Valley Local Nature Reserve, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. SHR195	Land at Shawbury Turn (A49/A53/A5124 junction), Shrewsbury	Shrewsbury	5.03	151	2.01	Greenfield site outside but adjacent to development boundary on N boundary of Shrewsbury to NW of Battlefield roundabout. Site currently in agricultural use for fodder/arable crops. Site has road frontage and vehicle access from A49. Pedestrian/cycle access and links via A49 (pavement) to existing established networks. Site is bounded by Shrewsbury-Crewe rail line to W; A5124 to S; A49 to E; Battlefield site access road and further agricultural land to N. Boundaries defined by established hedgerows and occasional mature trees on W and S and by established hedgerows and fencing to E and N.	Roads and rail links then agricultural land, residential properties and livestock market and commercial area to E.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is separated from the built form of the settlement by the A49 and A5124, this will require significant consideration. The site is also bounded by the railway line, A49 and A5124, this may have implications for the types of uses which are appropriate and site layout/ design. The site is adjacent to historic battlefield and associated ancient monument and in proximity to listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of ancient woodland at Upper Battlefield, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is separated from the built form of the settlement by the A49 and A5124, this will require significant consideration. The site is also bounded by the railway line, A49 and A5124, this may have implications for the types of uses which are appropriate and site layout/ design. The site is adjacent to historic battlefield and associated ancient monument and in proximity to listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable.
SHR196	Land at Nobold House, Shrewsbury	Shrewsbury	31.97	959	12.79	Greenfield site to W of Shrewsbury part adjacent to development boundary. Site is currently in general agricultural use primarily for grazing and fodder crops, although landscape has parkland appearance for much of site. Site has 2 distinct parcels: smaller N section to N of Hanwood Rd comprising farmland and farm complex of Oakfield's and residential property of Oakfield's. S of Hanwood Rd and W of Nobold La is larger element comprised of land around and properties of Nobold House and Nobold House Cottage. Site also includes part of site of brickworks and former clay pit off Hanwood Rd. Site is bounded by Nobold Lane to E; access track to Day House Farm to S; farmland to W and N; and NE corner with residential estate development. Site boundaries are defined by established trees and hedgerows with some additional fencing in places. Site contains many established trees and hedgerows for amenity value and as internal boundaries, also includes sizeable pond in S portion of site. Site has road and vehicle access to Nobold Lane and Hanwood Rd. Pedestrian and cycle links via both to existing established network.	Agricultural and open space; residential to NE.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, part of the site is an identified natural/semi-natural open space. This element of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance, the ability to provide an appropriate access to and into the site is subject to highway approval. The site contains a grade 2 listed building. It is also in proximity of a number of other listed buildings, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site contains and is in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a Local Wildlife Site - Radbrook/Mousecroft Lane, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, part of the site is an identified natural/semi-natural open space. This element of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. SHR197	Land south east of Battlefield Roundabout, Shrewsbury	Shrewsbury	32.83	985	13.13	Large greenfield site adjacent to development boundary on NE corner of Shrewsbury. Currently in agricultural use for grazing/fodder crops. Site is split into 5 distinct field subdivided by established trees and hedgerows. Site is bounded by agricultural land and A53 to N, further agricultural land to E and S and by A49 bypass and residential development to W. Site boundaries are comprised largely of established trees and hedgerows on all sides and site also contains a number of small ponds. Site has road frontage and vehicle access onto A53. There are no pedestrian links currently and cycle access is via A53 to established network.	Agricultural and residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is separated from the built form of the settlement by the A49, this will require due consideration. The site is within 300m of an historic battlefield, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also within proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. SHR194	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is located within and forms part of the Green Gap between Shrewsbury and Bayston Hill - retention of this Green Gap is an important policy principle will require significant consideration. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. However ad the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the site is located within and forms part of the Green Gap between Shrewsbury and Bayston Hill - retention of this Green Gap is an important policy principle will require significant consideration. The site may have long term potential for other forms of employment, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
SHR195	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. SHR198	Land north east of the Livestock Market and north east of Shrewsbury	Shrewsbury	48.89	1467	19.56	The site consists of a series of agricultural fields located to the north east of the Livestock Market and north of the A53.	Surrounding character is predominantly agricultural, with the exception of the adjacent livestock market/employment site and a small number of rural dwellings.	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, the site is separated from the development boundary by a livestock market and the A49/A53.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the site is separated from the development boundary by a livestock market and the A49/A53, only employment which suits this setting could be considered. The site is in proximity of Ancient Woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a registered battlefield, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site also contains and is in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
SHR199	Land east of Ferry House, Shrewsbury	Shrewsbury	9.36	281	3.75	The site consists of two agricultural fields bounded by the railway line to the north, river on part of its western boundary and A5 to the east and south.	Surrounding character is predominantly agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, a small portion of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the site is separated from the built form of the settlement and the services and facilities within it by the River Severn, a significant physical barrier which will require due consideration, particularly for open market residential development. The sites only road frontage is onto the A49 and there are currently no junctions that would serve development of this site, therefore the ability to provide an appropriate access to and into the site is unclear and any proposed access would be subject to highway approval. The site is proximity to Local Wildlife Sites - River Severn and Monkmoor Pool, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, a small portion of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
SHR200	Land adjacent to Ellesmere Road, opposite Mount Pleasant Road, Shrewsbury	Shrewsbury	6.18	185	2.47	The site consists of part of an agricultural field located to the west of Ellesmere Road.	Character to the north, south and west is predominantly agricultural. Character to the east is predominantly residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. Therefore open market residential development is contrary to policy. Furthermore, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. If this highway constraint can be addressed, the site may have long term potential for open market residential development, subject to appropriate policy changes and management of any other physical; heritage; or environmental constraints present. For instance, this site is adjacent to a Natura 2000 site, consequently, development is subject to an appropriate assessment under the Habitats Regulations and buffering is likely to be required. The proposed route of the NWRP runs through the site, this route needs to be protected and may have implications for the layout of development. The site contains and is in proximity of a number of veteran trees and trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Additionally the site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the ability to provide an appropriate access to and into the site is subject to highway approval. Given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. If this highway constraint can be addressed, the site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any other physical; heritage; or environmental constraints present. For instance, this site is adjacent to a Natura 2000 site, consequently, development is subject to an appropriate assessment under the Habitats Regulations and buffering is likely to be required. The proposed route of the NWRP runs through the site, this route needs to be protected and may have implications for the layout of development. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. Additionally the site is in proximity of a SSSI, therefore development is subject to an assessment of impact on the notified special interest features of the SSSI. Where an adverse impact is likely, there will be a need to consider whether the benefits outweigh both the harm to the special features and any broader impacts on the national network of SSSIs.
SHR201	Land east of the Cattle Market, north east of Shrewsbury	Shrewsbury	4.92	148	1.97	The site consists of part of an agricultural field located to the east of the cattle market.	Character to the north, east and south is primarily agricultural. Character to the east is predominantly employment (cattle market and associated uses).	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, the site is separated from the development boundary by a livestock market and the A49/A53.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and suitable management of any physical, heritage and environmental constraints present. For instance the site is separated from the development boundary by a livestock market and the A49/A53, only employment which suits this setting could be considered. The site is in proximity of Ancient Woodland, therefore development is subject to an assessment of impact on this natural asset. Where deterioration or loss is likely, national policy states that the need for, and benefits of, the development should clearly outweigh the loss if development is to be acceptable. The site is also in proximity of a registered battlefield, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR203	Land West of Battlefield Road, Shrewsbury	Shrewsbury	2.58	77	1.03	Part of an agricultural field located to the rear of several commercial properties and a public house. The site is also located to the north of a large factory building. The site is allocated for employment development.	Character to the north is predominantly agricultural (allocated for residential development). Character to the east is predominantly commercial. Character to the south is also commercial, with the adjacent factory building and associated facility a key feature. Character to the west is also commercial (although the site is separated from this area by the railway line).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. Therefore residential development is contrary to policy. Furthermore, a small portion of the site (along its southern boundary and some of the land at the potential access point) is located in flood zone 2 and/or 3, this may affect the location/suitability of the access, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The ability to provide an appropriate access to the site and ensuring that it is not exposed to flood risk is subject to approval. If an appropriate access can be established then the site may have long term potential subject to appropriate policy changes and management of any other physical, heritage and environmental constraints present. For instance the site is located within a primarily commercial location, adjacent to a prominent factory building/site which operates 24/7, this will require significant consideration as it may have the potential to impact on residential amenity. There is also a need to ensure that any development does not effect the operation of this facility or any other surrounding commercial properties. The site is also in proximity of a registered battlefield, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. However, part of the site (along its southern boundary and some of the land at the potential access point) is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The ability to provide an appropriate access to the site and ensuring that it is not exposed to flood risk is subject to approval. If an appropriate access can be established then the site is suitable for development subject to appropriate management of any physical, heritage and environmental constraints present. For instance, the site is in proximity of a registered battlefield, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Any uses will need to complement surrounding uses and the sites setting.

SHR198	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is separated from the development boundary by a livestock market and the A49/A53.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently employment development is limited to small scale rural enterprise and diversification schemes. However, due to the sites associated with the adjacent livestock market/employment site, it may have long term potential for other forms of employment subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such as the site is separated from the development boundary by a livestock market and the A49/A53, only employment which suits this setting could be considered.
SHR199	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically given the known constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. The site is also adjacent to a Natura 2000 site. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. However as the site is located adjacent to but outside the development boundary, suitable employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically given the known highway constraints in the area it is likely that the suitability of an access to and into the site is dependent on the construction of the North West Relief Road. The site is also adjacent to a Natura 2000 site. If suitable mitigation of this identified constraint were possible, the sites development potential for other forms of employment would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
SHR201	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development. SHR204	Land east of Battlefield Road, Shrewsbury	Shrewsbury	2.13	64	0.85	The site is approximately triangular shaped, located to the south of Battlefield Roundabout. It is bordered by the A512 to the west, the A49 to the east and a residential curtilage/coppice to the south. The site is allocated for employment development.	Character to the east is primarily agricultural. Character to the south is a mixture of residential and coppiced woodland. Character to the west is residential beyond which is agricultural (allocated for residential). Character to the north is a mixture of agricultural and commercial.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. Therefore residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any other physical, heritage and environmental constraints present. For instance the site is adjacent to Battlefield roundabout, appropriate buffering will be required. The site is also in proximity of a registered battlefield, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance, the site is in proximity of a registered battlefield, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Any uses will need to complement surrounding uses and the sites setting.
SHR205	Shrewsbury West SUE - Churncote South, Shrewsbury	Shrewsbury	2.18	65	0.87	The site is part of an agricultural field located to the south east of Churncote Roundabout, east of the A5 and south of the A458. The site represents part of the Shrewsbury West Sustainable Urban Extension. The site is allocated for employment development.	Surrounding character is predominantly agricultural. However land to the south and east has been allocated for development (mixed use development).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. Therefore residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any other physical, heritage and environmental constraints present. For instance the site is adjacent to Churncote roundabout, appropriate buffering will be required. The ability to provide an appropriate access is subject to highway approval.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is adjacent to Churncote roundabout, appropriate buffering will be required. The ability to provide an appropriate access is subject to highway approval.
SHR206	Shrewsbury West SUE - Oxon Business Park Phase 2, Shrewsbury	Shrewsbury	4.94	148	1.98	Series of agricultural fields forming a linear site to the north of Shrewsbury. The sites northern boundary is formed by the proposed route of the Oxon Link Road. The site is allocated for employment development. The site forms part of the Shrewsbury West Sustainable Urban Extension.	Character to the north and west is predominantly agricultural (allocated for mixed use development), there is also housing, retail and a park and ride to the west. Character to the east is predominantly agricultural. Character to the south is a mix of residential, commercial and agricultural.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. Therefore residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any other physical, heritage and environmental constraints present. For instance the site is in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The ability to provide an appropriate access is subject to highway approval.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is in proximity of a listed building therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The ability to provide an appropriate access is subject to highway approval.
SHR207	Shrewsbury West SUE - North of Oxon Link Road, Shrewsbury	Shrewsbury	10.00	300	4.00	Large site consisting of parts of a number of agricultural fields. The site is formed by Holyhead Road to the east, the route of the Oxon Link Road to the south, and a caravan site/grounds of Oxon Hall and the Severn Hospice to the north. The site is allocated for employment development. The site forms part of the Shrewsbury West Sustainable Urban Extension.	Character to the east is predominantly agricultural. Character to the south is agricultural (land allocated for employment development) beyond which the character is commercial. Character to the west is agricultural (land allocated for mixed use development). Character to the north is a mix of leisure and community care.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. Therefore residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any other physical, heritage and environmental constraints present. For instance the site is in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The ability to provide an appropriate access is subject to highway approval.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The ability to provide an appropriate access is subject to highway approval.
SHR208	Shrewsbury West SUE - Churncote North, Shrewsbury	Shrewsbury	1.17	35	0.47	Triangular site, representing part of an agricultural field. The site is bounded by the A458 (Welshpool Road) to the south; Calcott Lane to the east; and the proposed route of the Oxon Link Road to the North. The site has been allocated for employment development. The site represents part of the Shrewsbury West Sustainable Urban Extension.	Surrounding character is predominantly agricultural, although land to the south and east has been allocated for mixed use development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. Therefore residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any other physical, heritage and environmental constraints present. For instance the site is adjacent to Churncote roundabout, appropriate buffering will be required. The ability to provide an appropriate access is subject to highway approval. The site is adjacent to the proposed rout of the Oxon Link Road. There is a need to ensure that any development on this site facilitates and does not compromise the provision of this infrastructure.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is adjacent to Churncote roundabout, appropriate buffering will be required. The ability to provide an appropriate access is subject to highway approval. The site is adjacent to the proposed rout of the Oxon Link Road. There is a need to ensure that any development on this site facilitates and does not compromise the provision of this infrastructure.

SHR209	Land North of A5/A458 Welshpool Road Roundabout, Shrewsbury	Shrewsbury	6.95	208	2.78	An irregularly shaped site consisting of parts of two agricultural fields, located to the north of Welshpool Road Roundabout.	Surrounding uses are primarily agricultural and residential. Land to the east of the site is allocated for mixed use development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the implications on the loss of the gap between Shrewsbury and Calcott would require consideration. The site would be located to the north of the proposed route of the Oxon Link Road, which would create a level of separation from the settlement of Shrewsbury, which would require due consideration. The ability to provide an appropriate highway access to and into the site is subject to highway approval. The site contains and is in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the implications on the loss of the gap between Shrewsbury and Calcott would require consideration. The site would be located to the north of the proposed route of the Oxon Link Road, which would create a level of separation from the settlement of Shrewsbury, which would require due consideration. The ability to provide an appropriate highway access to and into the site is subject to highway approval. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
SHR210	Land north of Oxon Business Park, Shrewsbury	Shrewsbury	1.22	37	0.49	The site consists of part of an agricultural field and an area in employment use associated with the adjacent employment site.	Surrounding character is a mix of agricultural and commercial. Much of the adjacent agricultural land is allocated for employment development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any other physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. The site is adjacent to an existing employment area, the relationship between this site and the employment area will therefore require due consideration. The likely point of access would be through the adjacent employment site, which is likely to have implications for residential amenity.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any other physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval.
SHR211	Land at Hollydene, Shrewsbury	Shrewsbury	0.45	14	0.18	The site consists of a large dwelling and its curtilage.	Surrounding character is predominantly residential.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary. Therefore open market residential development is suitable in principle. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access is subject to highway approval. The site is in proximity to trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary. Therefore open market residential development is suitable in principle. For instance the ability to provide an appropriate access is subject to highway approval. The site is in proximity to trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is in a predominantly residential area, therefore any employment proposed will need to reflect this context and is likely limited to office based employment.
SHR212	Land east of Sundorne Pool, East of Shrewsbury	Shrewsbury	3.70	111	1.48	The site consists of an agricultural field located to the east Sundorne Pool and north of the B5062.	Surrounding uses are predominantly agricultural. However the site is located adjacent to the Severn Acres Sports Centre.	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, a small portion of the site is located within flood zones 2 and/or 3 (western boundary), therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the site is separated from the built form of the settlement by agricultural fields and the A49 which represents a significant physical barrier. Due to these factors the site is considered unsuitable for development.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However, a small portion of the site is located within flood zones 2 and/or 3 (western boundary), therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally, the site is separated from the built form of the settlement by agricultural fields and the A49 which represents a significant physical barrier. Due to these factors the site is considered unsuitable for development.
SHR213	Land at Underdale, Shrewsbury	Shrewsbury	14.96	449	5.98	The site consists of a series of agricultural fields located within a loop of the river severn.	Surrounding uses are a mix of residential, agricultural and leisure (a golf driving range).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore, much of the site is located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any other physical, heritage and environmental constraints present. SHR209	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the need to consider the implications on the loss of the gap between Shrewsbury and Calcott and the fact that the site would be located to the north of the proposed route of the Oxon Link Road, which would create a level of separation from the settlement of Shrewsbury.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is located in open countryside, consequently suitable employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment development, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the need to consider the implications on the loss of the gap between Shrewsbury and Calcott and the fact that the site would be located to the north of the proposed route of the Oxon Link Road, which would create a level of separation from the settlement of Shrewsbury.
SHR210	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. SHR215	Land adjacent to Salop Leisure, Emstrey Bank, Shrewsbury	Shrewsbury	2.18	65	0.87	Greenfield site outside development boundary. Part of the site is in agricultural use, the remainder of the site forms part of the landscaping associated with the touring caravan site and fishing pond to the south.	To the north and east land uses are predominantly agricultural. To the south land uses are predominantly leisure based (caravan site and fishing pond). To the west land uses are commercial (caravan sales at Salop Leisure).	Not Suitable	The site is located outside the development boundary within the open countryside. As such open market residential development is contrary to policy. Furthermore the site is not considered to have long term potential as it is separated from the development boundary by agricultural fields/the Salop Leisure site and the A5 which is a significant physical barrier. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is located outside the development boundary within the open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site is not considered to have long term potential for other forms of employment as it is separated from the development boundary by agricultural fields/the Salop Leisure site and the A5 which is a significant physical barrier. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
SHR216	Land East of Holyhead Road, Shrewsbury	Shrewsbury	23.15	695	9.26	A large site consisting of a number of agricultural fields located to the north of Shelton Lane, east of Holyhead Road, west of the river severn and south of Spring Coppice.	Character to north and east is predominantly agricultural. Character to the south is a mix of wooded areas and residential development. Character to the west is mixed, including agricultural land (much of which is allocated for mixed use development), healthcare facilities, employment facilities.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the settlement development boundary. As such open market residential development is contrary to policy. Furthermore part of the site (northern element) contains a local wildlife site, consequently development on this element of the site and an appropriate buffer is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. This element of the site and an appropriate buffer is therefore unsuitable for development. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site projects into the countryside north of Shrewsbury, this will require due consideration. The ability to provide an appropriate access to, into and through the site is subject to highway approval. The site is in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of a registered park/garden and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Due to peripheral location and elongated shape projecting away from the settlement into the countryside, only limited number of facilities and services accessible within appropriate distance, although there is potential for on site service provision.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, part of the site (northern element) contains a local wildlife site, consequently development on this element of the site and an appropriate buffer is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. This element of the site and an appropriate buffer is therefore unsuitable for development. The remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site projects into the countryside north of Shrewsbury, this will require due consideration. The ability to provide an appropriate access to, into and through the site is subject to highway approval. The site is in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in proximity of a registered park/garden and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Due to peripheral location and elongated shape projecting away from the settlement into the countryside, only limited number of facilities and services accessible within appropriate distance, although there is potential for on site service provision.
SHR217	The Pitch and Putt, Shrewsbury	Shrewsbury	3.26	98	1.30	the site consists of the Shrewsbury Pitch and Putt Site, and Bannatynes Health Club. The site is bounded by Hazeldine Way to the north, Oteley Road to the south, Meole Brace roundabout to the west and the railway line to the east.	Surrounding uses are varied, including open space (golf course), residential, commercial and retail.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary. However approximately 50% of the site is identified as an outdoor sports facility. Therefore this area of the site is not appropriate for development unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The remainder of the site is suitable in principle for open market residential development subject to material considerations and management of any physical, heritage and environmental constraints present. For instance the suitability of the access to serve alternative uses of the site will require highways approval. The site is in proximity of a conservation area, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. STC001	Stanmore Industrial Estate	Stanmore	18.03	541	7.21	A former airfield, the site is now an active and protected employment site inset within the Green Belt. The site is located to the east of Bridgnorth.	Character to the north and east is predominantly agricultural. Character to the south and west is predominantly woodland within Stanmore Country Park.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is identified as a protected employment site. As such open market residential development on the site would be contrary to policy. However the site may have long term potential subject to appropriate changes to policy and management of any physical, heritage and environmental constraints present. For instance as a former airfield and current employment site, there is likely to be contaminants present which will require due consideration. The site is separated from the built form of Bridgnorth forming a self-contained employment site, the suitability of a self-contained residential site in this location would require due consideration. The relationship between the site and Bridgnorth will require due consideration.	Currently Suitable - Subject to Further Detailed Assessment	The site is a protected employment site. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance as a former airfield and current employment site, there is likely to be contaminants present which will require due consideration.
STC002	Land adjacent Hickman Road, Stanmore Industrial Estate	Stanmore	4.56	137	1.83	The site was formerly part of the RAF Stanmore campus. Whilst the rest of the site was converted to an industrial estate, this component was allowed to naturalise. The site forms the gap between Stanmore Industrial Estate and The Hobbins (residential).	To the north are residential dwellings at The Hobbins, and agricultural land. To the east is agricultural land. To the south is Stanmore Industrial Estate and a wooded area (Stanmore Country Park). The wooded area (Stanmore Country Park) continues to the west of the site as do residential dwellings at The Hobbins.	Not Suitable	The site is located in the Green Belt. As such open market residential development is contrary to policy. Furthermore, the site forms the gap between Stanmore Industrial Estate and The Hobbins (residential), this will require due consideration. As a former airfield, there is likely to be contaminants present which will require due consideration. The site is closely associated with the adjacent Stanmore Industrial Estate and employment uses upon it, this will require due consideration.	Not Suitable	The site is located in the Green Belt. As such employment development is contrary to policy. Furthermore, the site forms the gap between Stanmore Industrial Estate and The Hobbins (residential), this will require due consideration. As a former airfield, there is likely to be contaminants present which will require due consideration.

SHR215	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been submitted through the 'call for sites' for a relevant use. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. Furthermore part of the site is not considered to have long term potential as it is separated from the development boundary by agricultural fields/the Salop Leisure site and the A5 which is a significant physical barrier.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). As the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. However, the site is not considered to have long term potential for other forms of employment as it is separated from the development boundary by agricultural fields/the Salop Leisure site and the A5 which is a significant physical barrier.
SHR216	Currently Available	The site has been submitted during consultation on the 'Preferred Scale and Distribution of Development' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	The site has been promoted for employment uses. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However, the site is not considered suitable for development as it is located within the open countryside and the Green Belt, as such open market residential development on the site would be contrary to local and national policy. National policy stipulates that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan. When considering Green Belt boundaries, Local Authorities should have regard to the intended permanence in the long term and the need to promote sustainable patterns of development. Shropshire Council is currently undertaking a Local Plan Review, which will be informed by a Green Belt Assessment and Review. The Local Plan Review process will determine whether any sites should be removed from the Green Belt and therefore determine the long term potential of such sites. Furthermore, the site forms the gap between Stanmore Industrial Estate and The Hobbins (residential), this will require due consideration. As a former airfield, there is likely to be contaminants present which will require due consideration. The site is closely associated with the adjacent Stanmore Industrial Estate and employment uses upon it, this will require due consideration. UFF002	Land adjacent to the canal, Uffington	Uffington near Shrewsbury	1.84	55	0.74	The site consists of two agricultural fields, which are somewhat detached from the built form of Uffington. Site boundaries are agricultural field boundaries.	Agricultural.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. The site is also separated from the built form of Uffington. Whilst Uffington is an identified and proposed Community Cluster, appropriate development is limited to suitable small-scale infill development and conversion of existing buildings. As such open market residential development is contrary to policy and it is not considered that this position is likely to change.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. The site is also separated from the built form of Uffington. As such suitable employment development is limited to small scale rural enterprise and diversification schemes and it is not considered that this position is likely to change.
UFF003X	Land at The Old Malt House, Uffington	Uffington near Shrewsbury	0.09	3	0.03						
UFF004	Land at west of Manor Farm, Uffington	Uffington near Shrewsbury	0.67	20	0.27	The site consists of a field located to the rear of properties fronting onto Chirch Road. The site has no obvious road frontage.	Agricultural to the south. Residential to the east. The river is to the west. To the north are various landuses including open space, scrubland and the river.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. Whilst Uffington is an identified and proposed Community Cluster, appropriate development is limited to suitable small-scale infill development and conversion of existing buildings. As such open market residential development is contrary to policy and it is not considered that this position is likely to change. Furthermore the site appears to be landlocked without any obvious road frontage.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes and it is not considered that this position is likely to change. However, the site appears to be landlocked without any obvious road frontage.
UFF005	Land at Bridge Farm, Uffington	Uffington near Shrewsbury	1.60	48	0.64	The site consists of a rectangular agricultural field located to the south of Uffington. Site boundaries are defined by agricultural field boundaries.	Primarily agricultural, although there are large rural dwellings on large plots to the north and farm buildings to the east.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. Whilst Uffington is an identified and proposed Community Cluster, appropriate development is limited to suitable small-scale infill development and conversion of existing buildings. As such open market residential development is contrary to policy and it is not considered that this position is likely to change.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes and it is not considered that this position is likely to change.
UFF006	Rear of hall opposite Mill Lane, Uffington	Uffington near Shrewsbury	1.92	58	0.77	An irregularly shaped site consisting of a series of agricultural fields wrapping around properties in Uffington. Site boundaries consists of agricultural field boundaries, wooded belts and property curtilages.	Character to the east is agricultural. Character to the north is a mix of woodland, agricultural and residential. Character to the west is residential. Character to the south is a mix of residential and agricultural.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. Whilst Uffington is an identified and proposed Community Cluster, appropriate development is limited to suitable small-scale infill development and conversion of existing buildings. As such open market residential development is contrary to policy and it is not considered that this position is likely to change.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes and it is not considered that this position is likely to change.
UFF007	Land North of Bridge Farm, Uffington	Uffington near Shrewsbury	1.13	34	0.45	The site consists of a series of agricultural fields to the south of Uffington. Site boundaries are defined by agricultural field boundaries.	Primarily agricultural, although there are large dwellings to the west and north and a farm complex to the south.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. Whilst Uffington is an identified and proposed Community Cluster, appropriate development is limited to suitable small-scale infill development and conversion of existing buildings. As such open market residential development is contrary to policy and it is not considered that this position is likely to change.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes and it is not considered that this position is likely to change.

UFF008	Adjoining Church Road, Uffington	Uffington near Shrewsbury	0.46	14	0.18	The site consists of a rectangular strip of an agricultural field. The sites eastern boundary is defined by property curtilages, northern boundary by the road, southern boundary by an agricultural field boundary, western boundary is undefined running through an agricultural field.	Primarily agricultural to north, west and south. Residential to east.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. Whilst Uffington is an identified and proposed Community Cluster, appropriate development is limited to suitable small-scale infill development and conversion of existing buildings. As such open market residential development is contrary to policy and it is not considered that this position is likely to change.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes and it is not considered that this position is likely to change.
WEM002	Land to east of Wem Industrial Estate, Wem	Wem	14.13	424	5.65	Agricultural field SW of Lower Lacon Caravan Park and B5065 Prees Rd.	Agricultural. Wem industrial estate to NW and Caravan Park to N	Not Suitable	The site is located outside of the settlement development boundary. Consequently open market residential development on the site would be contrary to policy. Approximately 35% of the site is located within flood zone 2 and 25% in flood zone 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore as the site is separated from the built form of Wem in an isolated location, it is not considered to have long term potential.	Not Suitable	The site is located outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 35% of the site is located within flood zone 2 and 25% in flood zone 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore as the site is separated from the built form of Wem in an isolated location, it is not considered to have long term potential for other forms of employment development.
WEM003	Land at Coed Hill, Wem	Wem	3.11	93	1.24	Two small pastures with high hedges to the north, south and east and dividing the fields.	Housing (n & w), promoted development land (e), agriculture & river (s)	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore, approximately 20% of the site is located in flood zones 2/3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within 300m of a Listed Building, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 20% of the site is located in flood zones 2/3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site is also within 300m of a Listed Building, therefore development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
WEM004	Land at Wem Industrial Estate, Wem	Wem	2.13	64	0.85	Former military land, now willow scrub woodland, pasture and overgrown fallow land with an industrial estate access running along W boundary. Fencing and some hedging to boundaries	Wem Industrial Estate to N, Souton Rd to S, access to Aston Grange to E	Not Suitable	The site is located adjacent outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore as the site is separated from the built form of Wem, it is not considered to have long term potential for open market residential development. The site is also adjacent to an established industrial estate, which has implications for residential amenity. The ability to access services and facilities from the site is also constrained as access is limited by distance from town centre as well as highway and traffic issues associated with the rail crossing.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, although the site is separated from the built form Wem, it is adjacent to Wem Industrial Estate and as such may have long term potential for other employment uses in support of this estate, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The ability to access services and facilities from the site is constrained as access is limited by distance from town centre as well as highway and traffic issues associated with the rail crossing. The site is in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Appropriate investigation and management of environmental assets will also be required.
WEM005	Land West of the Industrial Estate, Wem	Wem	8.46	254	3.38	Triangular area of grazing land East of Wem and railway line, west of Industrial Estate	Housing (s), Industrial estate (n), railway line (e), agriculture (w)	Not Suitable	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore the only potential point of access into the site is from within the adjacent industrial estate, which is unlikely to be appropriate for a residential development. As the site is adjacent to an established industrial estate, there are also implications for residential amenity. The ability to access services and facilities from the site is also constrained as access is limited by distance from town centre as well as highway and traffic issues associated with the rail crossing.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, as the site is adjacent to Wem Industrial Estate and the likely access is through this estate, the site may have long term potential for other employment uses in support of this estate, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance there is a need to provide an appropriate buffer to surrounding uses. The ability to access services and facilities from the site is also constrained as access is limited by distance from town centre as well as highway and traffic issues associated with the rail crossing. The site is within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.

UFF008	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. Whilst Uffington is an identified and proposed Community Cluster, appropriate development is limited to suitable small-scale infill development and conversion of existing buildings. As such open market residential development is contrary to policy and it is not considered that this position is likely to change.	Rejected	The site is not considered to be located within or in proximity of an existing or proposed Strategic/Principal/Key Centre or Community Hub. As such suitable employment development is limited to small scale rural enterprise and diversification schemes and it is not considered that this position is likely to change.
WEM002	Availability Unknown	The site was promoted within a previous SHLAA. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	The site was promoted within a previous SHLAA. WEM006	Coed Hill, Aston Road, Wem	Wem	1.15	34	0.46	Residential curtilage	Housing (n & w), promoted development land (e), agriculture (s)	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Access to services and facilities is constrained by highway and traffic issues associated with the rail crossing.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Access to services and facilities is constrained by highway and traffic issues associated with the rail crossing.
WEM007	Land south of Aston Road, Wem	Wem	2.31	69	0.92	The area consists of two small pastures with high hedges to the north, south and east and dividing the fields.	Housing (n, e & w), sewage treatment works to SW, agriculture (s)	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore the southern part of the site (approximately 35% is located in flood zone 2 (with a smaller area in flood zone 3), therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Access to services and facilities is constrained by highway and traffic issues associated with the rail crossing. The site contains a tree subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of a conservation area and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the southern part of the site (approximately 35% is located in flood zone 2 (with a smaller area in flood zone 3), therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Access to services and facilities is constrained by highway and traffic issues associated with the rail crossing. The site contains a tree subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of a conservation area and listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
WEM009	land behind Fothergill Way, Wem	Wem	5.28	159	2.11	Agricultural land bounded by hedges in floodplain north of River Roden and SW of Wem, bounded by watercourses and not adjoining the Development Boundary	Agricultural land. Residential areas (not adjoining) to the N and E	Not Suitable	The site is located adjacent outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Additionally the site is not currently suitable for development as approximately 75% of it is located within flood zones 2 and/or 3, and the element of the site that is not located within flood zones 2 and/or 3 is surrounded by land within these flood zones. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore the site does not appear to have a road frontage and all potential access routes are located in flood zones 2 and/or 3. Both issues make the site unsuitable for development.	Not Suitable	The site is located adjacent outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site is not currently suitable for development as approximately 75% of it is located within flood zones 2 and/or 3, and the element of the site that is not located within flood zones 2 and/or 3 is surrounded by land within these flood zones. Therefore the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore the site does not appear to have a road frontage and all potential access routes are located in flood zones 2 and/or 3. Both issues make the site unsuitable for development.
WEM010	Land off Pym's Road, Wem	Wem	4.17	125	1.67	agricultural field on gently sloping ground with hedgerow / fenced boundaries	Housing (e), hotel (s), agriculture	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access into the site is subject to highway approval. Appropriate investigation of potential heritage assets is also required. Site is crossed by a high pressure gas main.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. WEM013	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, these will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. However, as the site is located in the countryside suitable employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable assessment and management of the impact of development on the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.
WEM014	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify this matter. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. Over 60% within Flood Zones 2 and/or 3, this portion of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Much of the site located outside of flood zones 2 and/or 3 is located within the development boundary, therefore this element of the site may be suitable for development, subject to confirmation of the ability to establish a safe access and management of any other physical, heritage and environmental constraints (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Viability, achievability and availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. Over 60% within Flood Zones 2 and/or 3, this portion of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Much of the site located outside of flood zones 2 and/or 3 is located within the development boundary, therefore this element of the site may be suitable for development, subject to confirmation of the ability to establish a safe access and management of any other physical, heritage and environmental constraints (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.

Site Reference	Site Location	Settlement	Site Area (Ha)	Indicative Residential Capacity (at 30 dph)	Indicative Employment Floorspace Capacity (at 40% of total site) (Ha)	Site Description	Surrounding Character	Residential Suitability Conclusion	Residential Suitability Summary	Employment Suitability Conclusion	Employment Suitability Summary
WEM021	Builders Yard, New Street, Opposite Park Road, Wem	Wem	0.30	9	0.12	Former builders yard bounded by walls to side and rear. Buildings on New St frontage and N end of site	Residential (N & S), employment uses to E and W	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is not currently suitable for residential development as it is a protected employment site. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the development may impact adversely on the New St. junction and existing town centre traffic problems, any impact would need to be mitigated and is subject to highway approval. The site is located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of a scheduled monument and one or more listed buildings therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within proximity of a number of TPO's, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	Suitable subject to appropriate design and management of any physical, heritage and environmental constraints. Specifically the development may impact adversely on the New St. junction and existing town centre traffic problems, any impact would need to be mitigated. The site is located within a conservation area, therefore development of this site is subject to a heritage impact assessment. Where this shows that substantial harm to or a total loss of significance of this/these designated heritage asset(s) is likely then development needs to meet the tests set out in paragraph 133 of the NPPF. If less than substantial harm is likely, then this should be weighed against the public benefits of development. This site's suitability is therefore dependent on the necessary assessment(s) being undertaken and the conclusions reached. The site is also within proximity of a scheduled monument and one or more listed buildings therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within proximity of a number of TPO's, therefore development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
WEM025	Land off Trentham Road, Wem	Wem	1.27	38	0.51	Agricultural field on the NW edge of the built area of Wem, bounded by hedges	Residential (S&E); Agric (N); promoted land and isolated residential to W	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Any proposed employment use must be compatible with adjoining residential use and site layout and design important to minimise impact on surrounding residential development. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
WEM026	Land off Soulton Road (Opposite Cricket Ground), Wem	Wem	2.31	69	0.92	Adjoining development boundary on W edge of Wem. Agricultural field bound by hedges / fences north of Soulton Rd between Ash Grove E and residential area on Soulton Rd W	Housing (s / e / w), agriculture / promoted land (n / ne)	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Town centre facilities and services are approximately 750 metres east of the site, but access may be constrained by highway and traffic issues associated with the rail crossing. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. WEM027	Land to the north of Fismes Way, Wem	Wem	1.64	49	0.66	Agricultural fields, bounded by hedges north of Wem, East of Whitchurch Road, within Wem TC parish. Watercourse along Northern and W boundary. Site is outside but adjoining development boundary.	Residential S, promoted land N&W, agriculture & railway line E	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Development may impact adversely on the New St. junction and existing town centre traffic problems.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Development may impact adversely on the New St. junction and existing town centre traffic problems. Any employment uses on the site will need to complement surrounding uses.
WEM028X	Land at Maymyo	Wem	0.12	N/A	N/A						
WEM029	Land adjoining Wem Industrial Estate, Souton Road, Wem	Wem	2.35	70	0.94	Former military site, now rough grazing with electricity sub-station on N boundary. Wem industrial estate to N and Aston Park residential estate development to S.	Industrial estate (N), Residential (S), promoted land E&W	Not Suitable	The site is located adjacent outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore as the site is separated from the built form of Wem, it is not considered to have long term potential for open market residential development. The proposed access through the adjacent industrial estate is also unlikely to be appropriate for open market residential development. The site is also adjacent to an established industrial estate, which has implications for residential amenity. The ability to access services and facilities from the site is also constrained as access is limited by distance from town centre as well as highway and traffic issues associated with the rail crossing.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, although the site is separated from the built form Wem, it is adjacent to Wem Industrial Estate and as such may have long term potential for other employment uses in support of this estate, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The ability to access services and facilities from the site is constrained as access is limited by distance from town centre as well as highway and traffic issues associated with the rail crossing. The site is in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Appropriate investigation and management of environmental assets will also be required.

WEM021	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered achievable; and viable (subject to any further necessary viability assessment). The sites availability is unknown, where necessary this will be informed by discussions with landowners and/or their representatives. However, the site is not considered suitable for residential development as it is a protected employment site. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically the site is located within a conservation area. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. As a protected employment site, it is considered suitable for employment development subject to appropriate assessment and management of any impact on the physical; environmental; or heritage constraints to the site. Specifically potential impact on conservation area and heritage assets. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on confirmation of the sites availability, achievability and viability; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
WEM025	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Appropriate investigation and management of past uses and environmental assets would also be required.
WEM031	Land between Soulton Road and Railway Line, Wem	Wem	3.93	118	1.57	Agricultural field bound by hedges / fences north of Soulton Rd	surrounded by promoted agricultural land	Not Suitable	The site is located outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore there is no obvious road frontage, therefore the ability to provide an appropriate access to and into the site is therefore unclear. The site is also adjacent to an established industrial estate, which has implications for residential amenity. The ability to access services and facilities from the site is also constrained as access is limited by distance from town centre as well as highway and traffic issues associated with the rail crossing.	Not Suitable	Potentially suitable in the longer term as part of a wider master planned area including adjacent land, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. Specifically the ability to provide an appropriate access to the site is unclear - access is somewhat limited by highway and traffic issues associated with the rail crossing. The site is within proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. There is potential for protected species nearby.
WEM032	Land at Shawbury Road, Wem	Wem	1.07	32	0.43	grazing land fronting Shawbury Rd between ribbon housing south of Shawbury Rd and the curtilage of Robinson & Young Garage services	Garage (W), agriculture N & S, housing SE	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance surrounding uses are predominantly employment based (and the adjacent site within the development boundary is allocated for employment development), which would need to be considered and appropriately buffered. The site is separated from the non-employment element of the settlement by the railway line, with a narrow railway bridge the only linkage - access to town centre facilities and services are therefore constrained, this will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance access to town centre facilities and services is constrained by a narrow railway bridge. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
WEM033	Mill House Farm, Wem	Wem	2.99	90	1.19	Agricultural fields, bounded by hedges north of Wem, East of Whitchurch Road. Watercourse along N&E boundary. Outside but adjoining development boundary to S.	Whitchurch Rd (W), allocated land (S), promoted land (N&E)	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Development may impact adversely on the New St. junction and existing town centre traffic problems, which will require due consideration. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. The site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. WEM034	Land adjacent to Bridgefields, Wem	Wem	2.37	71	0.95	Rough grazing land east of railway and south-west of Aston Road. Site is south of Harris Croft and immediately north of the River Roden in Wem Rural Parish. Outside but adjoining development boundary to N.	Residential (N), Railway / Town centre (W), River Roden (S), sewage works (W)	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Wem. As such residential development is contrary to policy. Furthermore, approximately 20% of the site is an identified natural/semi-natural open space. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Furthermore the southern third of the site is located within flood zone 2, therefore this portion of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site (north-western portion) may have longer term potential subject to appropriate policy changes and management of the physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to the site; traffic issues associated with the rail crossing; the site lies on edge of historic core of Wem - possible archaeological implications on far N corner of site; the need to ensure that any development does not impact on the continued operation and potential for future expansion of the adjacent sewage treatment works and that an appropriate residential amenity on the site is achieved, potentially required to support development in the town; and the need to ensure that the adjacent sewage treatment works do not impact on the amenity of any potential occupiers of this site. The site is also located within proximity of a Conservation Area and one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Wem. WEM030	Availability Unknown	This site was identified within the previous Strategic Land Availability Assessment (SHLAA). Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viable	The site was represented during the SAMDev Site Allocations process. Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered viable and achievable (subject to any further necessary viability assessment). Its availability is unknown, where necessary, this will be informed by further discussions with landowners and/or their representatives. However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to confirmation of its availability; appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include safety and accessibility issues associated with the access and nearby railway crossing.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered to be available, viable and achievable (subject to any further necessary viability assessments). As the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential, subject to appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the nature of the access and the nearby railway crossing. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
WEM031	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. WEM036	The Larches, Shawbury Road, Wem	Wem	4.72	142	1.89	The site comprises 3-4 agricultural fields and the residential curtilage of the Larches, north of Shawbury Rd. The site is divorced from the built area of Wem by the railway embankment. Adjoins allocated employment site to W (ELR031).	Ribbon housing development to the south of Shawbury Rd, agricultural land surrounds the site	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance surrounding uses are predominantly employment based (and the adjacent site within the development boundary is allocated for employment development), which would need to be considered and appropriately buffered. The site is separated from the non-employment element of the settlement by the adjacent employment allocation and the railway line, with a narrow railway bridge the only linkage - access to town centre facilities and services are therefore constrained, this will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance access to town centre facilities and services is constrained by a narrow railway bridge. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
WEM037	Bank House Lane and Swain Close	Wem	2.30	69	0.92	Greenfield site on SW edge of Wem, outside but adjoining development boundary. Site is currently in agricultural use for grazing/pasture, and contains farmhouse and other agricultural buildings in NE corner of site. Site has agricultural use to N, W, and S and adjoins residential development of Swains Close and Fothergill Way to W. Site boundaries are clearly defined by trees/hedgerows to N and W and with residential properties to E, however no clear definition to S - appears to be arbitrary line across field. Site also contains established trees/hedgerow as remainder of internal field boundary. Approx. 8% of site in flood zones 2 and/or 3. Site does not have road frontage as such and is currently accessed via Bankhouse Lane but also has vehicle access via Swain Close. Pedestrian and cycle access via same routes to established networks - pavement provision on Swain Close.	Suburban edge of town location - some open countryside aspect alongside residential estate development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Wem. As such open market residential development is contrary to policy. Furthermore, approximately 5% of the site is located within flood zone 2 (and a smaller area in flood zone 3), therefore this portion of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have longer term potential subject to appropriate policy changes and management of the physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Wem. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 5% of the site is located within flood zone 2 (and a smaller area in flood zone 3), therefore this portion of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have longer term potential for other forms of employment subject to appropriate policy changes and management of the physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval.
WEM038	Land North of Aston Road and South of the Cricket Ground, Wem	Wem	4.51	135	1.80	Greenfield site on E edge of Wem, outside but adjoining development boundary. Site is currently in agricultural use for grazing/pasture. Site has residential use to W agriculture to S and E, Wem cricket Club to N and protected employment sites also to N and S. Site boundaries to W are defined by residential properties to S by Aston Rd to N by cricket club and employment land. E boundary not clearly defined - arbitrary line across field. Site has road frontage and current vehicle access to Aston road however SLAA proposal includes access from NE of site to Church Lane. Pedestrian and cycle access via same routes - no pavement provision.	Suburban edge of town location - some open countryside aspect alongside residential estate and commercial development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Wem. As such open market residential development is contrary to policy. The site may have longer term potential subject to appropriate policy changes and management of the physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Access to services and facilities is also constrained by highway and traffic issues associated with the rail crossing. The site also contains a tree subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Wem. As such open market residential development is contrary to policy. The site may have longer term potential subject to appropriate policy changes and management of the physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Access to services and facilities is also constrained by highway and traffic issues associated with the rail crossing. Surrounding uses are predominantly residential and the relationship between this site and these uses will require due consideration. The site also contains a tree subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
WEM039	Aston Road, Wem	Wem	2.36	71	0.94	Mixed site on E periphery of Wem, outside and away from development boundary. Site currently in agricultural use for grazing/pasture and overspill from adjoining business park. Site has agricultural use to N, E, and S to W is Aston Rd Business park with range of enterprises. Site boundaries are clearly defined to N and W by Aston Rd and Business Park respectively but boundaries are not physically defined on the ground to S and W. Site has road frontage and current vehicle access to Aston Rd. Pedestrian and cycle access via same route but no pavement provision for some distance along Aston rd. Small portion of site (<5%) in SE corner is in flood zones 2 and/or 3.	Open countryside alongside former creamery now in business use.	Not Suitable	The site is located adjacent outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. Furthermore as the site is separated from the built form of Wem, it is not considered to have long term potential for open market residential development. The site is also adjacent to an established and protected employment site, which has implications for residential amenity. The ability to access services and facilities from the site is also constrained as access is limited by distance from town centre as well as highway and traffic issues associated with the rail crossing.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, although the site is separated from the built form Wem, it is adjacent to a protected employment site and as such may have long term potential for other employment uses in support of this site, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The ability to access services and facilities from the site is constrained as access is limited by distance from town centre as well as highway and traffic issues associated with the rail crossing. The site is in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Appropriate investigation and management of environmental assets will also be required.

WEM040	Lane at Glebe, Wem	Wem	2.55	76	1.02	Greenfield site outside but adjoining development boundary (approx. 5% of site within development boundary). Currently 2 distinct fields in agricultural use for grazing/pasture and paddock. Site has agricultural land to W and currently to N though land to N is allocated housing site WEM003. S is further agricultural land and E is residential estate development off Lowe Hill Rd and the Old Rectory Hotel and grade 2 listed building. Site boundaries are clearly defined by adjoining properties, Lowe Hill Rd and Ellesmere Rd; and by hedgerows/trees to adjoin fields. Site contains pond in NW corner and internal established hedgerow boundary between fields and part area of veteran trees/TPOs on E boundary. Site has road frontage to both Lowe Hill Rd and Ellesmere Rd though vehicle access only from Lowe Hill Rd. pedestrian and cycle access via Lowe Hill Rd - pavement provision.	Suburban edge of town location - some open countryside aspect alongside residential estate development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Wem. As such open market residential development is contrary to policy. The site may have longer term potential subject to appropriate policy changes and management of the physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site also contains trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Wem. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have longer term potential for other forms of employment subject to appropriate policy changes and management of the physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Any employment uses would need to complement the sites setting and surrounding uses. The site also contains trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. The site is also within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
WEM041	Land west of Whitchurch Road, Wem	Wem	5.29	159	2.12	Greenfield site outside but adjoining development boundary on N edge of Wem. Site is 2 distinct fields currently in agricultural use for grazing/pasture. Site has agricultural use to N, E, and W and residential use and community allotments to S. Site boundaries to adjoining fields are clearly defined by hedgerows in some cases supplemented by fencing; site boundaries to S are clearly defined by adjoining residential properties. Site has road frontage and current vehicle access to Whitchurch Rd (B5476) on E and Love Lane to S. Pedestrian and cycle access via same route but no pavement provision for some distance on Whitchurch Rd.	Suburban edge of town location - some open countryside aspect alongside residential estate development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Wem. As such open market residential development is contrary to policy. The site may have longer term potential subject to appropriate policy changes and management of the physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Development may impact adversely on the New St. junction and existing town centre traffic problems. The site is also within proximity of a conservation area and listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary for Wem. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have longer term potential for other forms of employment subject to appropriate policy changes and management of the physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Development may impact adversely on the New St. junction and existing town centre traffic problems. The site is also within proximity of a conservation area and listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
WEM042	Land at Woodhouse Farm, Shawbury Road, Wem	Wem	1.41	42	0.56	Isolated greenfield site in open countryside considerable distance from development boundary and Wem built up area. Site is currently in agricultural use for grazing/pasture and is surrounded by agricultural use. Boundaries are clearly defined by hedges and trees with adjoining fields and by Shawbury Rd to N and by Tilley Green Lane to S. Site has road frontage and vehicle access from Shawbury Rd. pedestrian and cycle access via same route to established network - pavement provision along Shawbury Rd to Wem.	Open countryside	Not Suitable	Greenfield site located outside and separate from the development boundary in open countryside. As such open market residential development would be contrary to policy. Due to the sites isolated location it is not considered to have long term potential for open market residential development.	Not Suitable	Greenfield site located outside and separate from the development boundary in open countryside. As such employment development is limited to small scale rural enterprise and diversification schemes. Due to the sites isolated location it is not considered to have long term potential for other forms of employment development.
WEM044	The Larches, Shawbury Road, Wem	Wem	1.28	38	0.51	Greenfield site outside but adjoining development boundary on E edge of Wem. Currently in agricultural use for grazing/pasture. Site adjoins current agricultural land that is allocated employment site to W and other agricultural land N, S and E that are promoted SLAA sites. Site also has individual residential properties to SE corner. Site boundaries are clearly defined on all sides by trees/hedgerows. Watercourse along W boundary. Site has road frontage and current vehicle access to Shawbury Rd. Pedestrian and cycle access via same route to established network - pavement provision along Shawbury Rd to Wem town centre	Currently open countryside in agricultural use with some scattered residential development along Shawbury road.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance surrounding uses are predominantly employment based (and the adjacent site within the development boundary is allocated for employment development), which would need to be considered and appropriately buffered. The site is separated from the non-employment element of the settlement by the adjacent employment allocation and the railway line, with a narrow railway bridge the only linkage - access to town centre facilities and services are therefore constrained, this will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. WEM040	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access to and into the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However as the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment development, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the ability to provide an appropriate access to and into the site.

WEM045	Larches Wem Employment	Wem	2.34	70	0.93	Greenfield site outside and away from development boundary on E edge of Wem. Currently in agricultural use for grazing/pasture. Site adjoins current agricultural land that is promoted SLAA site to W and other agricultural land to N that is also promoted SLAA sites. Site also has individual residential properties to SE corner. Site boundaries are clearly defined on all sides by trees/hedgerows. Site has road frontage and current vehicle access to Shawbury Rd. Pedestrian and cycle access via same route to established network - pavement provision along Shawbury Rd to Wem town centre	Currently open countryside in agricultural use with some scattered residential development along Shawbury road.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. Consequently open market residential development on the site would currently be contrary to policy. The site may have long term potential, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance surrounding uses are predominantly employment based (and the adjacent site within the development boundary is allocated for employment development), which would need to be considered and appropriately buffered. The site is separated from the non-employment element of the settlement by the adjacent employment allocation and the railway line, with a narrow railway bridge the only linkage - access to town centre facilities and services are therefore constrained, this will require due consideration. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside of the settlement development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance access to town centre facilities and services is constrained by a narrow railway bridge. The ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of one or more listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
WEM046	Land South of Roden Grove, Wem	Wem	2.99	90	1.20	The site consists of an agricultural field bounded to the north by a development site; to the west by the River Roden; to the south by a wooded area and to the east by an agricultural field.	Surrounding character is predominantly agricultural. However land to the north of the site has Planning Permission for a residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. Therefore open market residential development is contrary to policy. Furthermore, a small portion of the site (along its western boundary) is located in flood zones 2 and/or 3, this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval (it is unclear whether the site has a road frontage, the proposed layout for the development to the site could provide such an access through the continuation of Roden Grove, however this development has not yet been implemented). The site is also within proximity of a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, a small portion of the site (along its western boundary) is located in flood zones 2 and/or 3, this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval (it is unclear whether the site has a road frontage, the proposed layout for the development to the site could provide such an access through the continuation of Roden Grove, however this development has not yet been implemented). Any employment uses on the site would need to complement the sites setting and its likely access through a predominantly residential area. The site is also within proximity of a number of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
WEM047	Land at Shawbury Road (B5063), Wem	Wem	5.36	161	2.14	Agricultural field to the south east of Wem. The site is allocated for employment development.	Character to the east is primarily agricultural. Character to the south is primarily either agricultural or employment based. Character to the north is primarily either agricultural or residential. Character to the west is primarily residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. As such residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site is subject to highway approval, this may represent a significant constraint for residential development due to a problematic junction between the site and the town, which is likely to generate greater numbers of journeys into the town. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance, the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
WEM048	Land north and east of the Shawbury Road Employment Allocation, Wem	Wem	7.03	211	2.81	The site consists of two agricultural fields located to the north and east of an existing employment allocation. The site lies to the east of the railway line.	Character to the south and east is predominantly agricultural. Character to the north is a mix of agricultural and residential. Character to the west is residential, but is separated from this site by the railway line.	Not Suitable	The site is located adjacent to but outside the development boundary. As such residential development is contrary to policy. Furthermore, approximately 70% of the site is located within flood zone 2 and a small portion of the site is also located in flood zone 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site also appears to be landlocked, being dependent on the development of the employment allocation to the south for an access. If such an access were possible, the suitability of this to serve a residential development would require due consideration and highway approval. The ability to provide an appropriate access to the site is also subject to highway approval, this may represent a significant constraint for residential development due to a problematic junction between the site and the town, which is likely to generate greater numbers of journeys into the town. Due to these constraints, the site is not considered to have long term potential for residential development.	Not Suitable	The site is located adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, approximately 70% of the site is located within flood zone 2 and a small portion of the site is also located in flood zone 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site also appears to be landlocked, being dependent on the development of the employment allocation to the south for an access. The ability to provide an appropriate access to the site is also subject to highway approval. As a result in isolation the site is unsuitable for employment development, although parts of the site (located outside flood zones 2 and/or 3) could represent in the future represent an appropriate extension to the adjacent employment allocation subject to appropriate policy changes and management of any physical, heritage and environmental constraints present.
WHT001	Garages on Wayland Close, Whitchurch	Whitchurch	0.06	5	0.02	The site is a row of garages and parking area in a predominantly residential area.	The surrounding buildings are predominantly residential dwellings and comprise of 2 storey medium to high density properties and related recreation area.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within an existing residential area within the Whitchurch development boundary, consequently it is considered a suitable site for residential development. However the site is within proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within an existing residential area within the Whitchurch development boundary, consequently it is considered a suitable site for residential development. The site is also located within proximity of a number of services and facilities. However, given the size of the site, residential character of the area and proximity to residential dwellings it is likely that the site is only suitable for office based employment.

Site Reference	Residential Availability Conclusion	Residential Availability Summary	Employment Availability Conclusion	Employment Availability Summary	Residential Achievability Conclusion	Residential Viability Conclusion	Residential Achievability/Viability Conclusion	Employment Achievability Conclusion	Employment Viability Conclusion	Employment Achievability/Viability Conclusion	Residential Overall Conclusion	Residential Overall Summary	Employment Overall Conclusion	Employment Overall Summary
WEM045	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically surrounding uses are predominantly employment based and their relationship to the site will require due consideration. The site is also separated from the non-employment element of the settlement by the adjacent employment allocation and the railway line, with a narrow railway bridge the only linkage - access to town centre facilities and services are also therefore constrained. The ability to provide an appropriate access to and into the site is subject to highway approval. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However as the site is located in open countryside, suitable employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically access to town centre facilities and services are constrained by a railway bridge and the ability to provide an appropriate access to and into the site is subject to highway approval. If suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; confirmation of the sites availability, achievability and viability; suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.
WEM046	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered achievable and viable (subject to any further necessary viability assessment). Its availability is unknown. However the site is not considered suitable for development as it is located adjacent to but outside the development boundary, as such residential development is contrary to policy. Furthermore, approximately 70% of the site is located within flood zone 2 and a small portion of the site is also located in flood zone 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site also appears to be landlocked, being dependent on the development of the employment allocation to the south for an access. If such an access were possible, the suitability of this to serve a residential development would require due consideration and highway approval. The ability to provide an appropriate access to the site is also subject to highway approval, this may represent a significant constraint for residential development due to a problematic junction between the site and the town, which is likely to generate greater numbers of journeys into the town.	Rejected	Availability, achievability and viability of the site are unknown. Furthermore the site in isolation is not considered suitable for employment development as the site also appears to be landlocked, being dependent on the development of the adjacent employment allocation to the south for an access. Furthermore, approximately 70% of the site is located within flood zone 2 and a small portion of the site is also located in flood zone 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. As a result in isolation the site is unsuitable for employment development, although parts of the site located outside of flood zones 2 and/or 3 could represent in the future represent an appropriate extension to the adjacent employment allocation subject to appropriate policy changes and management of any physical, heritage and environmental constraints present.
WHT001	Not Currently Available - Likely to become so	Shropshire Council Officers understand that the site is likely to become available for the relevant use, but the site is currently occupied (the user has not confirmed that they can/will vacate the site to allow its development, but their lease will expire at a specified point in the future or there is confidence that they will vacate the site) and/or it is subject to some other form of constraint (time limited or can be removed). It is however understood that it is owned by a willing landowner and/or developer; and that there are no legal or ownership problems which could limit development, beyond those which mean the site is not immediately available. Therefore information gathered for the purposes of this study suggests that there is confidence in the site becoming available for development in the future.	Availability Unknown	This site was identified within a previous Urban Housing Capacity Study. Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. WHT002	Land north of Edgeley Road, Whitchurch	Whitchurch	3.91	117	1.57	A green field site located east of Whitchurch's built form, between two railway lines. Existing access is from Edgeley Road from the south which runs along the sites entire southern border. The site itself is thickly vegetated throughout with a small water course running through the centre of the site from west to east.	There are currently two residential dwellings immediately west of the site, with Open Space and Outdoor Recreation to the south where Whitchurch Rugby Club is based. Also to the south is Edgeley Nursing Home just beyond Edgeley Road. The site is immediately surrounded on its east and west borders by trainlines, and Whitchurch's built form is to the north-west (residential) and east (employment).	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary, and so any open market residential development would be contrary to policy. Furthermore the site contains a wildlife site, consequently development on and within an appropriate buffer of this element of the site is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. The site also contains an area located within flood zones 2 and/or 3 (much of this is within the wildlife site), which runs across the entirety of the site, the land within Flood Zones 2 and/or 3 and that can only be accessed through Flood Zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site has a relatively limited capacity, but may have long term potential for development subject to appropriate policy changes and management of any physical, heritage and environmental constraints.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site contains a wildlife site, consequently development on and within an appropriate buffer of this element of the site is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. The site also contains an area located within flood zones 2 and/or 3 (much of this is within the wildlife site), which runs across the entirety of the site, the land within Flood Zones 2 and/or 3 and that can only be accessed through Flood Zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site has a relatively limited capacity, but may have long term potential for other forms of employment development subject to appropriate policy changes and management of any physical, heritage and environmental constraints.
WHT004	Land south of A41, Whitchurch	Whitchurch	0.54	16	0.22	The site is immediately south of the roundabout where the A525 meets the A41 at Cottage Farm, and is wedged between the A41 and B5476. The site is greenfield and is surrounded by trees and hedgerows around each of its borders.	Cottage Farm lies west of the site, over the B5476. Agricultural land surrounds most of the site, with the A41 to the north-west and B5476 to the west. A large, undeveloped SAMDev employment site lies 100m to the east of this site.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is adjacent to but outside the development boundary, and so any open market residential development is contrary to policy. The site may have long term potential for development subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. A particular consideration is the sites location to the south of the A41, which represents a significant physical barrier, separating potential occupiers from the settlement of Whitchurch.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is adjacent to but outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment development subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. A particular consideration is the sites location to the south of the A41, which represents a significant physical barrier, separating potential occupiers from the settlement of Whitchurch.
WHT005	Land at Sherrymill Hill, Whitchurch	Whitchurch	0.30	9	0.12	The site consists of a vacant plot within the built form of Whitchurch.	Character to the north, east and west is predominantly residential - although there is also green corridor to the west of the site. Character to the south is predominantly open space.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary, and so residential development is in line with policy. However, approximately 40% of the site is located within flood zone 2, therefore this part of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site is considered suitable for development, subject to appropriate management of any physical, heritage and environmental constraints present. For instance the site is within 250m of a Wildlife Site, and so development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 30m of multiple Veteran Trees/ trees protected by a Tree Preservation Order. Development is subject to an assessment of impact on these protected trees in order to demonstrate how they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is within 300m of a Conservation Zone. Development is subject to an assessment of impact on the significance of the setting of this heritage asset. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the development boundary, and so employment development is in line with policy. WHT002	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside; consequently open market residential development is contrary to policy. Furthermore the site contains a wildlife site, consequently development on and within an appropriate buffer of this element of the site is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. The site also contains an area located within flood zones 2 and/or 3 (much of this is within the wildlife site), which runs across the entirety of the site, the land within Flood Zones 2 and/or 3 and that can only be accessed through Flood Zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site has a relatively limited capacity, but may have long term potential for development subject to appropriate policy changes and management of any physical, heritage and environmental constraints (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is only suitable in policy terms for employment which is considered to be small scale rural enterprise and diversification schemes. However the site contains a wildlife site, consequently development on and within an appropriate buffer of this element of the site is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. The site also contains an area located within flood zones 2 and/or 3 (much of this is within the wildlife site), which runs across the entirety of the site, the land within Flood Zones 2 and/or 3 and that can only be accessed through Flood Zones 2 and/or 3 would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. WHT013	Land at Pear Tree Lane, Whitchurch	Whitchurch	7.02	211	2.81	Large site situated to the west side of Whitchurch, outside of the development boundary. Currently a combination of open space and agricultural land, the south-west of the site lies adjacent to the Shropshire Union Canal and Greenfields Reserve Wildlife Site to the south. A dozen or so residential dwellings lie north of the site along Pear Tree Lane.	The Whitchurch bypass lies to the west of the site, with further open space and the Shropshire Union Canal in between. Further residential development, which is within Whitchurch's development boundary, are to the south of the site. The majority of the site however is surrounded by open space and/or agriculture	Not Suitable	The site is located outside and separated from the development boundary. As such open market residential development is contrary to policy. Furthermore due to the sites poor relationship to the built form of the settlement, the site in isolation is not considered to have long term potential for open market residential. The site may have long term potential as part of a wider release in this location, which could provide greater integration to the existing settlement and its built form. Any long term potential of a larger release would be subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site (and wider area) is subject to highway approval. The sites topography is undulating and rises up over the settlement to its south, which will require due consideration. The site is also in proximity of a LNR and Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Suitable	The site is located outside and separated from the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore due to the sites poor relationship to the built form of the settlement, the site in isolation is not considered to have long term potential for other forms of employment development. The site may have long term potential as part of a wider release in this location, which could provide greater integration to the existing settlement and its built form. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
WHT015	Land off Tilstock Road, Whitchurch	Whitchurch	1.01	30	0.41	The triangular shaped site is wedged between Tilstock Road and the A525, beside a 5-exit roundabout to the south of Whitchurch.	The site is surrounded by two major roads (Tilstock Road and the A525) with Sir John Talbot's Technology College immediately north of the site, alongside Whitchurch Sport and Leisure Centre. Open space is located to the west of the site, with agricultural land and minor farm buildings to the south	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary, as such, any open market residential would be contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Additionally, the site is located on a roundabout and is bounded by the A525 and Tilstock Road, this will require appropriate buffering and consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. Additionally, the site is located on a roundabout and is bounded by the A525 and Tilstock Road, this will require appropriate buffering and consideration.
WHT016	Land adjoining Orchard Court, Tarporley Road, Whitchurch	Whitchurch	4.59	138	1.84	The agricultural site sits on the northern side of Whitchurch, adjacent to the development boundary alongside The Laurels. A dismantled railway sits north of the site, just south of Hill Valley Golf Course to the north. The site appears to be made up from 3 fields with hedgerows within the site and around its edges.	To the west lies residential development within Whitchurch's development boundary (across Tarporley Road). Further agricultural fields surround the site's east and southern borders, with Hill Valley Golf Course to the north.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary, as such, any open market residential would be contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is in proximity to numerous trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is in proximity to numerous trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
WHT017	Land off Terrick Road, Whitchurch	Whitchurch	5.97	179	2.39	The site consists of two sloping, medium-scale rough grassland pastures enclosed by rusting post and wire fencing and dense hawthorn hedgerow, which is degraded and gappy in places. The north and north-western extent of the site consists of the southern edge of the Macdonald Hill Valley Hotel Golf and Country Club. This area consists of formal mown grass and tree planting and is heavily influenced by its use as an active golf course.	The golf course lies north of the site with large open space fields to the south and west. Residential dwellings lie immediately to the east of the site off Terrick Road	Not Suitable	The site is located outside of the development boundary, as such, any open market residential would be contrary to policy. Furthermore, a part of the site is located in flood zone 2, as such this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. As this element of the site includes the potential access point, the remainder of the site is also unsuitable for development unless it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. If an alternative point of access could be provided and this is considered suitable by highways, such as through an adjacent site, then the site may have long term potential for development subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site is covered by a group TPO, therefore all trees on the site are subject to TPO protection, the site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Suitable	The site is located outside of the development boundary, as such employment development is limited to small scale rural enterprise and diversification schemes. However, a part of the site is located in flood zone 2, as such this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. As this element of the site includes the potential access point, the remainder of the site is also unsuitable for development unless it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. If an alternative point of access could be provided and this is considered suitable by highways, such as through an adjacent site, then the site may have long term potential for development subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site is covered by a group TPO, therefore all trees on the site are subject to TPO protection, the site is also in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. WHT013	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievable	Viability	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not suitable for development as it is located in open countryside, where open market residential development is contrary to policy. Furthermore due to the sites poor relationship to the built form of the settlement, the site in isolation is not considered to have long term potential for open market residential development. The site may have long term potential for open market residential development as part of a wider release in this location, which could provide greater integration to the existing settlement and its built form. Any long term potential of a larger release would be subject to appropriate policy changes; management of any physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.	Rejected	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However as the site is located in open countryside; appropriate employment development is limited to small scale rural enterprise and diversification schemes. The site poorly relates to the built form of the settlement, and is therefore in isolation unsuitable for other forms of employment development. The site may have long term potential for other forms of development as part of a wider release in this location, which could provide greater integration to the existing settlement and its built form. Any long term potential of a larger release would be subject to appropriate policy changes; management of any physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.
WHT014	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use (and has also been the subject of recently refused Planning Applications for this same use), and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However as the site is located in open countryside, appropriate employment uses are limited to small scale rural enterprise and diversification schemes. The site may have long term potential, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location; suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
WHT015	Currently Available	Shropshire Council Officers have confidence that the site is owned by a willing landowner and/or developer; it is available to develop now; there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	Shropshire Council Officers have investigated the availability of this site, but it remains unclear as to whether the site is available for this form of development. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. WHT019	Land at Terrick Hall, Terrick Road, North of Whitchurch	Whitchurch	0.54	16	0.21	Previously a tennis court (in part), the site is east of Terrick Road forming part of Hill Valley Golf Course and its grounds. Whilst thickly vegetated in patches closer to the road, the site is relatively flat throughout and is currently a green field.	The site is surrounded by the golf course, as well as having C1: Hotel use immediately south of the site at Terrick Hall Hotel. The health spa, as part of the golf course, is also located north of the site. The site lies circa 300m north of Whitchurch's development boundary. There are 2 residential units nearby to the north along Terrick Road.	Not Suitable	The site is located outside of the development boundary in an isolated location. As such, any open market residential would be contrary to policy. Furthermore, the site is part of an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Suitable	The site is located outside of the development boundary in an isolated location, as such employment development is limited to small scale rural enterprise and diversification schemes. However, the site is part of an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
WHT021	Land at South Hill Valley, Whitchurch	Whitchurch	4.60	138	1.84	The site forms part of the Hill Valley Golf Course. It is a relatively linear site, lying to the north of the Whitchurch development boundary.	The north is characterised by the managed Golf Course (outdoor sports facility). To the east and south character is predominantly agricultural. To the west character is residential, beyond which is agricultural.	Not Suitable	The site is located outside the development boundary. As such open market residential development is contrary to policy. Furthermore, much of the site comprises an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Additionally, the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site also contains and is in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The site is located outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, much of the site comprises an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision. Additionally, the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site also contains and is in proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.
WHT025	Land at 31 Pear Tree Lane, Whitchurch	Whitchurch	2.31	69	0.92	Greenfield site outside and away from development boundary. Site is on W edge of Whitchurch adjoining existing development off Pear Tree Lane. Site has residential development to N and fields in agricultural use to E and W and to S borders Whitchurch Country park which contains Greenfields Reserve LWS and LNR. Boundaries are clearly defined by trees and hedgerows with adjoining fields and fencing to properties to N. Site does not have road frontage as such and appears to be landlocked with no highway access. Pedestrian and cycle access via Pear Tree Lane (no pavement) to established network.	Mixed suburban and countryside.	Not Suitable	The site is located outside of the development boundary, as such, any open market residential would be contrary to policy. Furthermore the site appears to be land locked and poorly relates to the built form of the settlement, as such in isolation it is unsuitable for development. The site may have long term potential as part of a wider release in this location, which could provide greater integration to the existing settlement and its built form. Any long term potential of a larger release would be subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site (wider area) is subject to highway approval. The sites topography is undulating and rises up over the settlement to its south, which will require due consideration. The site is also within proximity of a LNR and Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Suitable	The site is not located within development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site appears to be land locked and poorly relates to the built form of the settlement, as such in isolation it is unsuitable for development. The site may have long term potential as part of a wider release in this location, which could provide greater integration to the existing settlement and its built form. Any long term potential of a larger release would be subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site (wider area) is subject to highway approval. The sites topography is undulating and rises up over the settlement to its south, which will require due consideration. The site is also within proximity of a LNR and Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
WHT026	Land south of Wrexham Road, Whitchurch	Whitchurch	13.77	413	5.51	Large greenfield site outside but adjoining development boundary on W edge of Whitchurch. The site lies within the Whitchurch bypass and has highway frontage to N, S, and W with current highway access from all three sides; bypass on W; Wrexham Rd on N and Belton Rd to S. Pedestrian access most suitable via Wrexham Rd (pavement provision), cycle access most appropriate via Belton Lane. Site has residential development to SW and N; MacDonald's drive-thru/service station/garage/petrol/retail sales on NW corner of site; and further agricultural land to W and E. Boundaries of site are clearly defined on all sides by established hedgerows and trees. Site itself is sub-divided into 6 distinct field parcels each in agricultural use for mixture of arable, pasture and fodder crops and with distinct boundaries comprised further hedgerows and trees.	Mixed agricultural and suburban	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary, as such, any open market residential would be contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also in proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
WHT029	Land at Broughall Fields and Sundorne, Whitchurch	Whitchurch	23.63	709	9.45	Large greenfield site outside but adjoining development boundary on SE edge of Whitchurch. Site is outside bypass though has extensive road frontage to bypass on W as well as Ash Rd to E. Current highway access off bypass at Broughall Fields farm Edgeley Lane and Ash Rd. Pedestrian and cycle access poor - no pavement provision on either bypass (A525) or Ash Rd. Site currently in agricultural use for arable/fodder crops. Site also contains Broughall Fields Farm and anaerobic digester. Site is adjacent to Waymills Industrial estate and North Shropshire College on opposite side of bypass and has agricultural use on other 3 sides with scattered individual dwellings. Site boundaries are clearly defined by trees and hedgerows on all sides and by roads to N, E and W.	Open countryside to E and S, urban development to N and W.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary, as such open market residential development would be contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is located to the south of the A525 (outside the Whitchurch bypass), this represents a significant physical barrier and will require appropriate consideration. The site is also located adjacent to the Waymills Business Park and GroContinental Site (separated from it by the A525) and distant from the residential areas within the settlement, this will also require due consideration. The site is within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. Importantly, the site is also within proximity of a SAC and Ramsar Site, therefore development is subject to an appropriate assessment under the Habitats Regulations.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is located to the south of the A525 (outside the Whitchurch bypass), this represents a significant physical barrier and will require appropriate consideration. The site is also located adjacent to the Waymills Business Park and GroContinental Site (separated from it by the A525), employment on this site is therefore likely to be a more appropriate use. The site is within proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of a local wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. WHT019	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside in an isolated location, consequently open market residential development is contrary to policy. Furthermore, the site is part of an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. However as the site is located in open countryside in an isolated location, appropriate employment development is limited to small scale rural enterprise and diversification schemes. However, the site is part of an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.
WHT021	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. Furthermore, much of the site comprises an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.	Rejected	Availability, achievability and viability are unknown. However, as the site is located outside the development boundary, suitable employment development is limited to small scale rural enterprise and diversification schemes. Furthermore, much of the site comprises an identified outdoor sports facility. Development on this element of the site is therefore not appropriate unless an assessment has been undertaken which clearly indicates that the open space or facility is surplus to requirements or the loss would be replaced by equivalent or better provision.
WHT025	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site was represented during the SAMDev Site Allocations process for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viability	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not suitable for development as it is located in open countryside, where open market residential development is contrary to policy. Furthermore as the site is land locked and has poor relationship to the built form of the settlement, the site in isolation is not considered to have long term potential for open market residential development. The site may have long term potential for open market residential development as part of a wider release in this location, which could provide an appropriate access and greater integration to the existing settlement and its built form. Any long term potential of a larger release would be subject to appropriate policy changes; management of any physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.	Rejected	Availability, achievability, and viability are unknown, where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. As the site is located in open countryside; appropriate employment development is limited to small scale rural enterprise and diversification schemes. However, the site appears to be landlocked and poorly relates to the built form of the settlement and is therefore in isolation unsuitable for employment development. The site may have long term potential for as part of a wider release in this location, which could provide an appropriate access and greater integration to the existing settlement and its built form. Any long term potential of a larger release would be subject to appropriate policy changes; management of any physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers); and the outcome of a visual impact and landscape sensitivity assessment.
WHT026	Currently Available	The site was represented during the SAMDev Site Allocations process for a relevant use, and it is understood that it is owned by a willing landowner and/or developer; it is available to develop now; and there are no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development. WHT031	Land adj. to Black Park Lane, Whitchurch	Whitchurch	2.22	66	0.89	An area of scrubland to the east of Black Park road and west of the railway line. The site contains a poor access track, scattered trees and grassed areas. Outside but adjoining development boundary.	To the east of the site is Black Park road beyond which is a row of residential buildings, agricultural land and a sports playing field. To the west of the site is the railway line with agricultural land beyond it. To the north there are further agricultural fields and to the south is the settlement of Whitchurch.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary, as such open market residential development would be contrary to policy. Furthermore part of the site is located in flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally the site contains a small area of a local wildlife site, this element of the site and an appropriate buffer is also unsuitable for development as it would likely lead to is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. However, the remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site contains a very small portion and is in proximity of wildlife sites, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in close proximity to a grade 2 listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Suitability of access subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, part of the site is located in flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Additionally the site contains a small area of a local wildlife site, this element of the site and an appropriate buffer is also unsuitable for development as it would likely lead to is likely to lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. However, the remainder of the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site contains a very small portion and is in proximity of wildlife sites, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also in close proximity to a grade 2 listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. Suitability of access subject to highway approval.
WHT032	Chester Avenue, Whitchurch	Whitchurch	0.70	21	0.28	A large patch of grass field surrounded by and dotted with trees on the site, with a path crossing the site from east to west. Its located west of some agricultural land and both south and east of some residential dwellings. Outside but adjoin development boundary on W of Whitchurch.	To the north there is a single detached house with surrounding gardens which are bordered by a row of trees. To the west there is a larger grassed field for agricultural use and to the east there are further residential buildings with large plots as well as a road to the far east of the site. The southern side borders residential properties.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary, as such open market residential development would be contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site is in proximity to a wildlife site therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The potential access point is relatively narrow therefore the ability of this access to serve the development of the site is subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site is in proximity to a wildlife site therefore development is subject to an assessment of the impact on this locally designated site. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The potential access point is relatively narrow therefore the ability of this access to serve the development of the site is subject to highway approval.
WHT033	Land to the rear of 66 Wrexham Road, Whitchurch	Whitchurch	1.60	48	0.64	Greenfield site outside but adjoining development boundary on W edge of Whitchurch. Site is currently in agricultural use for rough grazing. Site adjoins similar field to E and series large ponds to E; to N are residential properties along Wrexham Rd and S are residential properties on Mare Close. Site boundaries are clearly defined by residential properties N and S and by hedgerows and trees to E and W. Site also includes a number of scattered trees. Site does not have road frontage and current highway access is via Wrexham Rd. Pedestrian and cycle access via same to Wrexham Rd - pavement provision.	Suburban residential and informal open space	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary, as such open market residential development would be contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval and is a particular concern for this site. The site is within 30m of veteran tree/TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of conservation area and grade 2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. For instance the ability to provide an appropriate access to and into the site is subject to highway approval and is a particular concern for this site. The site is within 30m of veteran tree/TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of conservation area and grade 2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
WHT034	Land at Station Approach, Whitchurch	Whitchurch	0.43	13	0.17	Elongated narrow brownfield site part in and part outside development boundary on E side of Whitchurch between Castillon Drive estate development and Shrewsbury-Crewe rail line and to N of SMS Motors and current station. Site currently scrub land but ex-rail land for sidings/storage/maintenance etc, S portion of site currently used for informal parking, N portion currently vacant. Site boundaries clearly defined by residential properties to W; rail line to E; station to S and WHT031 to N. Some established trees and shrubs on site. Site has no road frontage as such and current vehicle access only through existing garage site. Pedestrian and cycle access not evident either.	Suburban residential along rail route, with some commercial use near station.	Not Suitable	The site is adjacent to but largely outside the development boundary. Consequently residential development is contrary to policy. Furthermore the site appears to be landlocked, with no obvious point of access available. The narrow shape of the site and its proximity to both railway and neighbouring properties means suitable residential layout difficult to achieve. The site is also within 250m of Staggs Brook Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within 300m of grade 2 listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Suitable	The site is adjacent to but largely outside the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site appears to be landlocked, with no obvious point of access available. The narrow shape of the site and its proximity to both railway and neighbouring properties means suitable employment development layout difficult to achieve. The site is also within 250m of Staggs Brook Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The site is also within 300m of grade 2 listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.
WHT035	Land to the North of the Grove, Whitchurch	Whitchurch	3.05	91	1.22	Large greenfield site outside but adjoining development boundary on N edge of Whitchurch adjacent to The Grove estate development. Currently in agricultural use for rough grazing. Site has residential use to S and farm and 2 semi detached properties adjacent NE boundary and agricultural use to N, W, and SW; to E is Hill Valley Golf Club. Site boundaries are clearly defined by trees/hedgerows to adjoining fields and by B5476 (Tarporley Rd) to E. Site has road frontage and current highway access to Tarporley Rd. Pedestrian and cycle access via same route - no pavement provision.	Open countryside mostly in agricultural use except to E with golf club and SE with The Grove suburban estate development	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary, as such open market residential development would be contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The relationship of the site to the wider settlement requires due consideration.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The relationship of the site to the wider settlement requires due consideration.

WHT036	Land north of Pear Tree Lane, Whitchurch	Whitchurch	4.93	148	1.97	Large greenfield site outside and away from development boundary on W side of Whitchurch adjacent to A41 Whitchurch bypass. Site currently 4 distinct fields in use for grazing/fodder crops with some internal hedge boundaries. Site has agricultural land on all 4 sides with some individual properties on Pear Tree Lane on SE corner and Stoneleigh Farm on SW corner. W boundary is with A41 Whitchurch bypass. Site boundaries are clearly defined by tree/hedgerows. Site has road frontage to A41 but current vehicle access is via track off Pear Tree Lane; SLAA submission includes plan for direct access from A41. Pedestrian and cycle access via Pear Tree Lane - no pavement provision.	Open countryside with some individual properties.	Not Suitable	The site is located outside and separated from the development boundary. As such open market residential development is contrary to policy. Furthermore due to the sites poor relationship to the built form of the settlement, the site is not considered to have long term potential for open market residential development.	Not Suitable	The site is located outside and separated from the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore due to the sites poor relationship to the built form of the settlement, the site is not considered to have long term potential for other forms of employment development.
WHT037	Land south of Mount Farm, Whitchurch	Whitchurch	2.67	80	1.07	Greenfield site outside but adjoining development boundary. Site lies S of Haroldgate development (14/01264/FUL pp 23/12/2014 - 100 dwells) under construction. In addition site has agricultural use to E and W and recent (14/05325/OUT - pp 02/07/2015 12 dwells) residential development to S. Site currently in agricultural use for pasture/rough grazing. Boundaries clearly defined by trees and hedgerows to E, W, and S, and to N by Haroldgate. Site has road frontage and current vehicle access off Haroldgate. Pedestrian and cycle access via same to established network	Mixture of countryside and residential development	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary, as such open market residential development would be contrary to policy. However, the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site is also within 30m of veteran tree/TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is located outside of the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. The site is also within 30m of veteran tree/TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
WHT038a	Land west of the A41, Chemistry Farm, Whitchurch	Whitchurch	4.01	120	1.60	Greenfield site outside and away from development boundary to W of A41 bypass and N of Shropshire Union Canal (Langollen branch) and Wrexham Rd. Site currently in agricultural use for rough grazing/pasture. Site has agricultural use on all 4 sides with Wrexham Rd, canal marina and caravan site to S, A41 bypass to E, and Staggs Brook LWS to N and also contained within the site. Boundaries clearly defined by Staggs Brook to N, Wrexham road and marina/caravan site to S, A41 to E, although no obvious boundary to W. Site has road frontage and current vehicle access to Wrexham Rd. pedestrian and cycle access via same route to established network.	Open countryside.	Not Suitable	Greenfield site located outside and away from the development boundary and the built form of Whitchurch. It is also outside the ring of the bypass. As such, any open market residential development would be contrary to policy. Furthermore, due to the sites location is not considered to have long term potential. The site also contains an area located in flood zones 2/3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore the site also contains part of a local wildlife site, therefore this element of the site and an appropriate buffer is unsuitable for development as it would likely to have an adverse effect on this asset and as such is contrary to national and international legislation. The ability to provide an appropriate access into the site is also subject to highway approval. Staggs Brook and Canal may be barriers to development and infrastructure provision.	Not Suitable	Greenfield site located outside and away from the development boundary and the built form of Whitchurch. It is also outside the ring of the bypass. As such, employment development is limited to small scale rural enterprise and diversification schemes. However, due to the sites location is not considered to have long term potential for other forms of employment. The site also contains an area located in flood zones 2/3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. Furthermore the site also contains part of a local wildlife site, therefore this element of the site and an appropriate buffer is unsuitable for development as it would likely to have an adverse effect on this asset and as such is contrary to national and international legislation. The ability to provide an appropriate access into the site is also subject to highway approval. Staggs Brook and Canal may be barriers to development and infrastructure provision.
WHT038b	Land at Chemistry Farm within the river loop, Whitchurch	Whitchurch	2.77	83	1.11	Green field site outside and away from development boundary on W edge of Whitchurch. Site lies within loop of Shropshire Union canal to E of A41 bypass. Site is currently in agricultural use for paddock/rough grazing. Canal loop forms N, E, and S boundaries and A41 bypass forms W boundary, Boundaries clearly defined by canal and road also by many established trees especially on W boundary. Site contains part of Staggs Brook LWS. Site has road frontage with A41 bypass but no vehicle access current access is to Chemistry via drawbridge, track and towpath. Pedestrian and cycle access via same route to established network.	Open countryside with scattered residential dwellings to S.	Not Suitable	Greenfield site outside and separated from the development boundary. As such open market residential would be contrary to policy. Furthermore the site does not appear to have a road frontage or an access suitable to serve the development of the site. The site also contains an area located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site also includes part of the Staggs Brook Local Wildlife Site, therefore this element of the site and an appropriate buffer are unsuitable for development as it would likely lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. Additionally, Staggs Brook and the Canal may be barriers to development and infrastructure provision. The site is also in proximity of a further Local Wildlife Site and Local Nature Reserve.	Not Suitable	Greenfield site outside and separated from the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However the site does not appear to have a road frontage or an access suitable to serve the development of the site. The site also contains an area located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The site also includes part of the Staggs Brook Local Wildlife Site, therefore this element of the site and an appropriate buffer are unsuitable for development as it would likely lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. Additionally, Staggs Brook and the Canal may be barriers to development and infrastructure provision. The site is also in proximity of a further Local Wildlife Site and Local Nature Reserve.
WHT038c	Land at Chemistry Farm, Whitchurch	Whitchurch	2.22	66	0.89	Greenfield site outside but adjoining development boundary on W edge of Whitchurch. Currently in agricultural use for rough grazing/paddock. boundaries not clearly defined on long N boundary but presence of established trees etc gives moderate indication of boundary. S boundary defined by residential properties canal and towpath; W boundary with canal; and E boundary with agricultural land. Site has frontage to towpath access track and current vehicle access from this but no road frontage as such. Alternative access could be provided from Heronbrook estate. Cycle and pedestrian access via either route to established network. Site contains part of Staggs Brook LWS and adjoins to N Whitchurch Country park and Greenfields Reserve LWS and LNR.	Open countryside to N and W residential estate development to S and E.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary, as such, any open market residential would be contrary to policy. Furthermore, the site contains part of the Staggs Brook Local Wildlife Site, therefore this area and an appropriate buffer is unsuitable for development as it would likely lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site adjoins Greenfields Reserve Local Wildlife Site and Local Nature Reserve, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. The ability to provide an appropriate access is also subject to highway approval.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary. WHT036	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not suitable for development as it is located in open countryside, separated from both the development boundary and the built form of the settlement, where open market residential development is contrary to policy.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. However as the site is located in open countryside; appropriate employment development is limited to small scale rural enterprise and diversification schemes. The site poorly relates to the built form of the settlement, and is therefore in unsuitable for other forms of employment development.
WHT037	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. WHT039	Land South and West of Mount Farm, Whitchurch	Whitchurch	4.15	125	1.66	Greenfield site outside but adjoining development boundary on W edge of Whitchurch. Site is currently in agricultural use for pasture/fodder crops. Site boundaries are clearly defined by trees and hedgerows except for extended element of W boundary where is no defined physical boundary - arbitrary line. Site is bordered to E by existing allocated site (WHT046) which is u/c; and to S, E, and N by further agricultural land. Site has number of internal field boundaries comprised hedgerows and trees. Site has/will have road frontage and vehicle access off Harold Gate estate development (WHT046). Pedestrian and cycle access via same route to established network	Open countryside in agricultural use to N, W and S. New residential estate development to E	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary, as such, any open market residential would be contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance comments will be needed from the highway department regarding highway access. The site is within 30m of veteran tree/TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of conservation area and grade 2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
WHT040	Land south of Wrexham Road, Whitchurch	Whitchurch	0.82	25	0.33	Small greenfield site outside but adjoining development boundary on 3 sides. Site is currently in use as garden/hobby farm and small paddock/rough grazing area and includes large pond in SW corner. Site has residential development on 3 sides and further agricultural land to W. Boundaries are clearly defined with residential properties by fences/hedgerows etc and with agricultural land to W by line of trees. Site does not have road frontage as such and current vehicle access is from Wrexham Rd via surfaced track/driveway. Pedestrian and cycle access via same route to Wrexham Rd and established network.	Suburban residential	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary, as such, any open market residential would be contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access into the site is subject to highway approval and is a particular concern for this site. The small site size and proximity of neighbouring properties means the site is restricted and scale/design become critical to avoid adverse impact on neighbouring properties. The site is within 30m of veteran tree/TPO, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within 300m of conservation area and grade 2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access into the site is subject to highway approval and is a particular concern for this site. The small site size and proximity of neighbouring properties means the site is restricted and scale/design become critical to avoid adverse impact on neighbouring properties. WHT042	The Oaklands Farm, Whitchurch	Whitchurch	8.20	246	3.28	Greenfield site outside but adjoining development boundary on E edge of Whitchurch E of Shrewsbury-Crewe rail line and N of SAMDev housing allocation WHT051. Site is currently in agricultural use for arable and fodder crops. Site also contains part of Staggs Brook LWS. Site has further agricultural land to N and E; residential development to S and rail line to E. Boundaries are clearly defined by tree and hedgerows on all 4 sides although some hedges are gappy in nature. Site does not have road frontage as such and current vehicle access is via track through allocated site WHT051 so site effectively land locked at present. Pedestrian and cycle links same route to established network via Waymills/Nantwich Rd.	Character to the west is predominantly residential. Character to the north is predominantly agricultural. Character to the east is predominantly agricultural, however this land has been allocated for employment development. Character to the south is a mix of residential and land allocated for residential development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary. As such open market residential development is contrary to policy. Furthermore the site contains part of Staggs Brook Local Wildlife Site, therefore this element of the site and an appropriate buffer are not suitable for development as it would likely lead to a significant adverse effect on one or more locally designated site(s) and as such is contrary to policy. Part of the site is also located within flood zones 2 and/or 3, therefore this element of the site would only be considered appropriate if it is considered necessary (through the sequential and/or exception test); the risk can be mitigated; and it will not increase risk elsewhere. The remainder of the site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance comments will be needed from highway department regarding highway access. The site is also within 300m of grade 2 listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary. WHT043	Land between Chester Road & Pear Tree Lane, Whitchurch	Whitchurch	8.66	260	3.46	large greenfield site outside and away from development boundary on W edge of Whitchurch. Site currently in agricultural use for grazing/pasture and fodder crops. Site has agricultural use on all four sides and the A41 bypass on W boundary; E boundary to Chester Rd and properties along it; S boundary to properties on Pear Tree Lane. Site boundaries comprised fences/hedges to adjacent properties and trees/hedgerows to adjacent fields and roads. Site has road frontage to both Chester Rd on E and A41 bypass on W but no current highway access from either road. Submission proposes access via Chester Rd. pedestrian and cycle access also via Chester Rd to established network.	Countryside in agricultural use with some residential development to S and E of site.	Not Suitable	The site is located outside and separated from the development boundary. As such open market residential development is contrary to policy. Furthermore due to the sites poor relationship to the built form of the settlement, the site is not considered to have long term potential for open market residential development.	Not Suitable	The site is located outside and separated from the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. Furthermore due to the sites poor relationship to the built form of the settlement, the site is not considered to have long term potential for other forms of employment development.
WHT044	adjacent Chester Rd	Whitchurch	3.24	97	1.30	Greenfield site outside and away from development boundary on W edge of Whitchurch on N side of Chester rd. Site is 3 distinct field parcels currently in agricultural use as grassland and grazing/fodder crops. Site has further agricultural land to N and E and partly to S and W. Some residential properties to W of site along Pear Tree Lane. Site boundaries comprised established trees/hedgerows on all sides Site has road frontage and current vehicle access to Chester Rd. pedestrian and cycle access via same route to Chester Rd and established network.	Agricultural/countryside with some residential development to S	Not Suitable	The site is located outside and separated from the development boundary. As such open market residential development is contrary to policy. Furthermore due to the sites poor relationship to the built form of the settlement, the site in isolation is not considered to have long term potential for open market residential development. The site may have long term potential as part of a wider release in this location, which could provide greater integration to the existing settlement and its built form. Any long term potential of a larger release would be subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site (and wider area) is subject to highway approval. The site is also in proximity of a tree subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded.	Not Suitable	The site is located outside and separated from the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However due to the sites poor relationship to the built form of the settlement, the site in isolation is not considered to have long term potential for other forms of employment development. WHT043	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Rejected	The site is considered available, viable and achievable (subject to any further necessary viability assessment). However the site is not suitable for development as it is located in open countryside, separated from both the development boundary and the built form of the settlement, where open market residential development is contrary to policy.	Rejected	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners and/or their representatives; and any further necessary viability assessment work. However as the site is located in open countryside; appropriate employment development is limited to small scale rural enterprise and diversification schemes. The site poorly relates to the built form of the settlement, and is therefore in unsuitable for other forms of employment development.

WHT047	Linden Court	Whitchurch	2.86	86	1.14	Largely greenfield site including existing residential properties on W edge of Whitchurch. Part of site around existing properties lies within development boundary remainder of site is outside, Current pre-app discussions underway for residential development in conjunction with Fairfields sheltered housing group. W portion of site is currently used for rough grazing and E portion appears to be garden and unused land for Linden Court. Site has road frontage to Haroldgate and current vehicle access via Linden Court driveway to Tarporley Rd and driveway for Fairfields off Chester Rd to S. Pedestrian and cycle access from either - pavement provision - to established network. Site boundaries are clearly defined by neighbouring residential properties and fences/hedges etc and with agricultural land to W by existing hedgerows and trees. Site contains a number of established mature trees.	Residential to N, S, and E, Agricultural land/countryside to W.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the site in within proximity of a conservation area and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary. The site is also within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.
WHT048	off Pear Tree Lane	Whitchurch	5.67	170	2.27	Large greenfield site outside and away from development boundary on W side of Whitchurch adjacent to A41 Whitchurch bypass S of Pear Tree lane. Site currently 2 distinct fields in use for grazing/fodder crops with some internal hedge boundaries. Site has agricultural land on all 4 sides with some individual properties on Pear Tree Lane on NE corner and Stoneleigh Farm on NW corner; W boundary is with A41 Whitchurch bypass. Site boundaries are clearly defined by tree/hedgerows. Site has road frontage to A41 but current vehicle access is via track off Pear Tree Lane. Pedestrian and cycle access via Pear tree Lane - no pavement provision.	Open countryside with some individual properties.	Not Suitable	The site is located outside and separated from the development boundary. As such open market residential development is contrary to policy. Furthermore due to the sites poor relationship to the built form of the settlement, the site in isolation is not considered to have long term potential for open market residential. The site may have long term potential as part of a wider release in this location, which could provide greater integration to the existing settlement and its built form. Any long term potential of a larger release would be subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site (and wider area) is subject to highway approval. The sites topography is undulating and rises up over the settlement to its south, which will require due consideration. The site is also in proximity of a LNR and Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.	Not Suitable	The site is located outside and separated from the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. However, due to the sites poor relationship to the built form of the settlement, the site in isolation is not considered to have long term potential for other forms of employment development. The site may have long term potential as part of a wider release in this location, which could provide greater integration to the existing settlement and its built form. Any long term potential of a larger release would be subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the ability to provide an appropriate access to and into the site (and wider area) is subject to highway approval. The sites topography is undulating and rises up over the settlement to its south, which will require due consideration. The site is also in proximity of a LNR and Local Wildlife Site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm.
WHT050	Land East of Tarporley Rd	Whitchurch	1.70	51	0.68	Site is outside but adjoins development boundary, extends to around 1.69 hectares and is currently in agricultural use as grazing land. It stands within 500 metres of Whitchurch town centre and has a short section of roadside frontage onto Tarporley Road. A public footpath runs along its north western boundary while dwellings are located to both sides of the road frontage and opposite. Access is gained from Tarporley Road which runs between the town centre and the A49. The site slopes away from Tarporley Road to a low lying area with a pond.	Character to the south and west is predominantly residential. Character to the north is predominantly agricultural. Character to the east is a mix of agricultural, woodland and commercial.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary. As such open market residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints. For instance the ability to provide an appropriate access to and into the site is subject to highway approval. The site in within proximity of a conservation area and several listed buildings, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also within proximity of trees subject to TPO protection, therefore development is subject to an assessment of impact on this/these protected tree(s) in order to demonstrate how it/they can be safeguarded. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	Greenfield site located outside but adjoining the development boundary. As such employment development is limited to small scale rural enterprise and diversification schemes. The site may have long term potential for other forms of employment development, subject to appropriate policy changes and management of any physical, heritage and environmental constraints. WHT047	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	The site has been promoted during the 2017 Call for Sites for residential development. For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. The site is located in open countryside, consequently suitable employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment development, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.

WHT052	Land at Oaklands Farm (B5398), Whitchurch	Whitchurch	9.01	270	3.60	The site consists of a series of agricultural fields to the east of Whitchurch. The site is allocated for employment development.	Character to the north and east is primarily agricultural. Character to the south is primarily employment. Character to the west is a mix of agricultural, employment and residential.	Not Currently Suitable but Future Potential - Subject to Further Detailed Assessment	The site is an employment allocation. As such residential development is contrary to policy. The site may have long term potential subject to appropriate policy changes and management of any physical, heritage and environmental constraints present. For instance the site is also in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. If less than substantial harm is likely, then this should be weighed against the public benefits of development. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The site is also in proximity of a wildlife site, therefore development is subject to an assessment of the impact on this locally designated site. Where this assessment shows a significant and unavoidable adverse effect, there will be a need to consider whether the social and economic benefits of development outweigh the harm. However, the site is considered suitable for development in relation to this matter, subject to acceptable safeguarding. The ability to provide an appropriate access into the site is subject to highway approval.	Currently Suitable - Subject to Further Detailed Assessment	The site is located within the settlement development boundary and allocated for employment uses. Therefore employment development on the site would be considered an appropriate use. Suitability is subject to appropriate management of any physical, heritage and environmental constraints present. For instance, the site is in proximity of a listed building, therefore development is subject to an assessment of impact on the significance of the setting of these heritage assets. Where this shows that substantial harm or a total loss of significance is likely then development must meet a number of tests set out in national policy. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as it is an employment allocation, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include the need to consider the sites location to the south of the A525 (Whitchurch Bypass), which represents a significant physical barrier, separating potential occupiers from the settlement of Whitchurch. The site is also in proximity of a Ramsar/SAC (Brown Moss), therefore development is subject to an appropriate assessment under the Habitats Regulations. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.	Accepted - Subject to Further Detailed Assessment	The site is considered suitable; available; achievable; and viable (subject to any further necessary viability assessment) for employment development. Suitability of the site for employment development is subject to appropriate management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and where appropriate the outcome of a visual impact and landscape sensitivity assessment. The site is also in proximity of a Ramsar/SAC (Brown Moss), therefore development is subject to an appropriate assessment under the Habitats Regulations. Furthermore the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site.
WHT054	Currently Available	The site has been submitted through the 'call for sites' for a relevant use, and this submission confirms that the site is available now; that there is a willing landowner/developer; and no legal or ownership problems which could limit development. Therefore information gathered for the purposes of this study suggests that there is confidence in the site being available and will come forward for development.	Availability Unknown	The site has been submitted through the 'call for sites' for a relevant use, but this submission does not specify that the site is available for this form of development and subsequent investigations have not been able to clarify whether it is. Therefore information gathered for the purpose of this study is unable to confirm that the site is available for this form of development.	Achievable	Viable	For a scheme to be 'viable' it must make financial sense to both the developer and the landowner, within the constraints imposed by the market; planning policies; and any required infrastructure obligations. It is within this context that the NPPF defines a viable scheme as one that provides competitive returns to a willing landowner and developer. Shropshire's geographical location and rural character make it a desirable place to live. Like many other Counties, Shropshire has a diverse housing market. However, despite this within Shropshire residential development is generally considered viable, unless there are site specific issues which impact upon viability. Consequently, residential development upon any site is generally considered achievable and viable unless there are site specific issues evident. However, to support this conclusion on the achievability and viability of development, a separate viability assessment will be undertaken.	Achievability Unknown	Viability Unknown	Shropshire has a diverse economy, reflecting both the agricultural base of the countryside and the diverse industrial/commercial history of its settlements. The main employment areas are located within Shrewsbury and the Market Towns where the majority of additional demand and provision is likely to arise. Outside of these areas new employment development will generally be in response to a specific need or business use. For the purpose of this exercise, where a site is promoted for employment use within a settlement or a specific occupier is apparent for a site in a rural location, it is assumed that the site is viable for employment development. In other locations where viability is less certain the viability of the site will be identified as unknown. A separate viability assessment will inform the eventual conclusion on the development potential of sites considered to have potential for employment development or are suitable for development in other respects.	Long Term Potential - Subject to Further Detailed Assessment	The site is considered available; achievable; and viable (subject to any further necessary viability assessment). However the site is not currently suitable for development as much of it is located in open countryside, consequently open market residential development is contrary to policy. The site may have long term potential, subject to appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.	Long Term Potential - Subject to Further Detailed Assessment	Availability, achievability and viability of the site are unknown. Where necessary, this will be informed by further discussions with landowners; their representatives; and any further necessary viability assessment work. Much of the site is located in open countryside, consequently suitable employment development is limited to small scale rural enterprise and diversification schemes. However, the site may have long term potential for other forms of employment development, subject to confirmation of the sites availability, achievability and viability; appropriate changes to policies affecting this location and suitable management of the physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment.
